NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Unaudited Interim Information

The condensed consolidated financial statements (including notes to condensed consolidated financial statements) of Metron Technology N.V. (Metron or the Company) included herein have been prepared by the Company, without audit, pursuant to the rules and regulations of the Securities and Exchange Commission (SEC). In the opinion of management, the accompanying condensed consolidated financial statements reflect all adjustments, consisting only of normal recurring adjustments, necessary for their fair presentation. Historical results are not necessarily indicative of the results the Company expects in the future. Certain prior period items have been reclassified to conform with the current presentation. This report should be read in conjunction with the consolidated financial statements and notes thereto for the fiscal year ended May 31, 2002 included in the Company s Annual Report on Form 10-K, as filed with the SEC.

Liquidity

As of February 28, 2003, the Company had \$11.3 million of cash and cash equivalents and \$11.5 million of short-term borrowings under its various lines of credit. All of our lines of credit are payable on demand or subject to periodic, generally semi-annual or annual, review. In April, we renewed our credit facilities in Singapore of \$2.0 million and in Germany of \$2.7 million until February and March 2004, respectively. While we believe that our current lines of credit will continue to be available to the Company through at least fiscal 2003, given recent developments in our business and industry, we cannot give any assurance that our lenders will agree to continue to make these facilities available to the Company on terms or in amounts acceptable to the Company, or at all. In particular, we cannot assure you that the Compass Bank facility will continue to be available to the Company after mid May 2003 on favorable terms, or at all. Any inability on our part to retain our existing credit facilities or enter into replacement facilities would impair the Company s ability to fund its current operations and to achieve its longer-term business objectives.

Loss Per Share

Basic loss per common share is based on the weighted-average number of common shares outstanding in each period. Diluted earnings per common share reflect the potential dilution that could occur if dilutive securities were converted into common shares. For all periods presented, the reported net loss was used in the computation of basic and diluted earnings per common share.

A reconciliation of the shares used in the computation follows:

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

	Three months ended February 28,		Nine months ended February 28,	
	2002	2003	2002	2003
	(Shares in thousands)			
Shares used for basic earnings per common share	12,867	13,121	12,846	13,067
Potential common shares having a dilutive effect				
Shares used for diluted earnings per common share	12,867	13,121	12,846	13,067

Options to purchase 3,575,963 common shares of the Company were excluded from the calculation of diluted earnings per share for both the three- and nine-month periods ended February 28, 2002, because their effect was anti-dilutive. For both of these periods, these anti-dilutive securities have a weighted-average exercise price of \$8.08.

Options to purchase 4,126,088 common shares of the Company were excluded from the calculation of diluted earnings per share for both the three- and nine-month periods ended February 28, 2003, because their effect was anti-dilutive. For both of these periods, these anti-dilutive securities have a weighted-average exercise price of \$7.08.

As part of the acquisition of certain assets and liabilities of Advanced Stainless Technologies, Inc., a Texas corporation (AST), the Company agreed to pay additional consideration in the form of a number of the Company's common shares up to the lesser of (1) 51,500 common shares or (2) \$1,200,000 in value of common shares (based upon the average trading price of the Company's common shares as reported on the Nasdaq National Market for each of the five consecutive trading days immediately prior to such issuance), if certain performance milestones are achieved for the two fiscal years ended May 31, 2003 and May 31, 2004. These shares were excluded from the calculation of diluted earnings per share for the three- and nine- month periods ended February 28, 2003, respectively, because their effect was anti-dilutive.

Revenue Recognition

The Company's revenues consist primarily of product revenues generated from the sale of equipment and materials and revenues associated with the provision of services. Revenue is recognized in accordance with SAB101. Materials and other product sales are generally recognized on the shipment of goods to customers. Most equipment sales are recorded as multiple element transactions in which the portion of the sale represented by the fair value of future installation and warranty services is deferred, and only the residual amount of the sale representing the equipment itself is recognized upon shipment to the customer. In certain circumstances, depending on the terms of the transaction, the entire transaction or a portion of the residual amount attributable to the equipment itself is deferred. Revenue is recognized for deferred installation revenue, and deferred equipment revenue, if any, when the customer accepts the equipment as production enabled in the fab. Warranty revenue is recognized ratably over the applicable warranty period. Generally, the Company warrants products sold to customers to be free from defects in material and workmanship for up to two years. Revenue from service agreements is recognized ratably over the agreement period, while revenue from service without a service agreement is recognized in the periods in which the services are rendered to customers.

Deferred Warranty Revenue

Most equipment sales include a portion of the sale represented by the fair value of future warranty revenue. The warranty revenue is deferred when the equipment is delivered to customers, and recognized ratably over the warranty period. Deferred warranty revenue activity was as follows:

(Dollars in thousands)	Deferred Warranty Revenue
Balance, May 31, 2002	\$ 5,006
Warranty revenue deferred on equipment sales	2,733
Warranty revenue recognized	(4,333)
Foreign exchange effect	515
Balance, February 28, 2003	\$ 3,921

Inventories

Inventories consist primarily of purchased products and are stated at the lower of cost (first-in, first-out or weighted average basis) or net realizable value. Provision is made for slow-moving and obsolete items. Components of inventory are as follows:

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

	May 31, 2002	February 28 2003,
	(Dollars in thousands)	
Equipment, spare parts and material inventory, net	\$ 47,772	\$ 39,091
Delivered equipment pertaining to deferred revenue	4,293	5,755
Inventories, net	\$ 52,065	\$ 44,846

2. CREDIT FACILITIES COVENANTS

At February 28, 2003, we were in violation of covenants with Compass Bank for which we obtained a waiver. In April 2003, Compass Bank agreed to extend its \$10 million facility through mid May 2003. Certain of our other credit facilities contain covenants that require us to meet or maintain certain minimum ratios, and we currently expect to meet all such other financial covenants. A breach of a covenant in a credit facility could result in the lender demanding repayment of all or part of the related indebtedness and could impair our ability to obtain additional access to our current or alternate credit facilities.

3. GOODWILL

On June 1, 2002, the Company adopted the provisions of Statement of Financial Accounting Standards (SFAS) No. 142, *Goodwill and Other Intangible Assets*. SFAS No. 142 requires that goodwill and intangible assets determined to have an indefinite useful life and acquired in a purchase business combination are not to be amortized and should be evaluated for impairment at least annually.

Under the transition provisions of SFAS 142, the Company during the second quarter of fiscal 2003, performed an assessment to test the carrying value of goodwill and other intangible assets for impairment. The assessment determined the fair value of reporting units based on discounted cash flow. Additionally, during the second fiscal quarter of 2003, an interim assessment of the carrying value of goodwill was performed as a result of the Company's restructuring and an agreement providing for the early termination of the distribution agreements with FSI International, Inc. as described in notes 4 and 6. This assessment of fair value was determined using expected future cash flows after taking into account the anticipated lost revenue from FSI. The result of both assessments indicated that the carrying value of the Company's goodwill was not impaired.

However, the Company's market capitalization (share price quoted on NASDAQ multiplied by common shares outstanding) has been below its net book value (NBV) since July 2002 and substantially below NBV for the eight-month period ended February 28, 2003. As a result, the comparison for estimates of the fair value of the Company's assets and liabilities to the lower market capitalization indicated that the Company's carrying value of goodwill was fully impaired. Accordingly, the Company recognized an impairment charge of \$8.3 million of goodwill, the entire carrying value, in the three-month period ended February 28, 2003. Goodwill impairment amounted to \$7.4 million that pertained to the equipment segment, and \$0.9 million for the materials segment.

The following table presents the impact of SFAS 142 on net loss and loss per common share had SFAS 142 been in effect for all periods.

	Three months ended February 28,		Nine months Ended February 28,	
	2002	2003	2002	2003
	(Dollars in thousands, except for per share amounts)			
Net loss	\$ (928)	\$ (12,627)	\$ (1,776)	\$ (20,409)
Amortization of goodwill	313		932	
Net loss without goodwill amortization	\$ (615)	\$ (12,627)	\$ (844)	\$ (20,409)

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

Basic and diluted loss per common share as reported	\$	(0.07)	\$	(0.96)	\$	(0.14)	\$	(1.56)
Basic and diluted loss per common share without goodwill amortization	\$	(0.05)	\$	(0.96)	\$	(0.07)	\$	(1.56)

4. TRANSITION AGREEMENT WITH FSI

In October 2002, the Company and FSI International, Inc. (FSI) entered into a transition agreement, which was subsequently amended, providing for the early termination of their distribution agreements in Europe and Asia. Pursuant to the agreement, effective March 1, 2003 (the closing date), FSI will assume direct sales, service and applications support and logistics responsibilities for its surface conditioning and microlithography products in Europe and Asia, except that the Company will continue to take purchase orders for spare parts until April 15, 2003 in accordance with the terms of the distribution agreements, while the Company will continue to represent FSI products in Israel. The Company's revenues for FSI products and services in Europe and Asia were approximately \$5.9 million and \$8.6 million for the quarters ended February 28, 2002 and 2003, respectively, and \$23.7 million and \$21.9 million for the nine-month periods ended February 28, 2002 and 2003, respectively.

Under the terms of the transition agreement, during the second quarter of fiscal 2003, FSI advanced \$3.0 million in cash to the Company, which was included in other current liabilities at February 28, 2003. On the closing date, the advance was applied toward the repurchase by FSI of inventory and equipment that the Company purchased under the current distribution arrangement. Additionally, FSI has agreed to pay to the Company an early termination fee. Once the amount of the final payment by FSI has been agreed, FSI is required to surrender up to 1,154,000 of the Company's common shares owned by FSI with a maximum value of \$2.75 million as the form of consideration for the termination fee.

On April 7, 2003, the transition of the distribution agreements with FSI was completed. FSI will transfer to the Company 567,105 common shares of the Company, which is in addition to the \$3.0 million cash advance that the Company received in October of 2002. As a result, FSI's ownership of the Company's outstanding common shares changed from approximately 20.5% to approximately 16.2%. Approximately 90 employees who were dedicated to sales, technical service and applications engineering activities related to the distribution of FSI products in Europe and Asia transferred to FSI.

5. CABOT DISTRIBUTION AGREEMENT

In August 2002, Cabot Microelectronics advised us of its decision to assume the direct distribution of its products in Europe and Singapore; the effective date of the transition will be June 1, 2003. Metron will continue to market Cabot Microelectronics products in Israel. Revenue from the sale of products manufactured by Cabot Microelectronics was 21.1% and 16.1% of total revenue for the three months ended February 28, 2002 and 2003, respectively, and 16.6% and 15.9% of total revenue for the nine months ended February 28, 2002 and 2003, respectively. In accordance with the distribution agreement, Cabot is obligated to purchase our inventory at our carrying valuing at June 1, 2003.

6. RESTRUCTURING COSTS

Restructuring costs of \$1.1 million incurred during fiscal 2002 represented termination costs for 56 employees and the abandonment of certain lease facilities. The equipment division reduced its headcount by 27 employees, the materials division terminated 17 employees, and 12 terminated employees were part of finance and administration.

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

During our second quarter of fiscal 2003, as a result of continuing slow industry conditions, the Company announced plans to reduce the number of its employees by approximately 125 in addition to the employees we expected that would be transferred to FSI. During the quarter ended February 28, 2003, the Company incurred an additional \$1.2 million of the restructuring costs pertaining to the cost of terminating 36 employees and the abandonment of certain leased facilities within both equipment and material segments. The total number of employees terminated as of February 28, 2003 was 124 people. The equipment division reduced its headcount by 66 employees, the materials division terminated 12 employees, and 46 terminated employees were part of finance and administration. In estimating the accrual for abandoned leased facilities the Company assumed it could sublease the facilities in the future, which could require additional adjustments. At February 28, 2003, the restructuring costs and remaining accrued liability are as follows.

	Personnel Costs (Cash)	Abandoned Lease Facilities (Cash)	Total
(Dollars in thousands)			
Restructuring costs			
Amounts accrued	\$ 1,530	\$ 262	\$ 1,792
Amounts paid	431		431
Balances, November 30, 2002	1,099	262	1,361
Amounts accrued	847	359	1,206
Amounts paid	1,149	108	1,257
Remaining accrual, February 28, 2003	\$ 797	\$ 513	\$ 1,310

7. SEGMENT AND GEOGRAPHIC DATA

Metron operates predominantly in the semiconductor industry. Metron provides marketing, sales, service and support solutions to semiconductor materials and equipment suppliers and semiconductor manufacturers. Reportable segments are based on the way the Company is organized, reporting responsibilities to the chief executive officer and on the nature of the products offered to customers. Reportable segments represent the equipment division, which includes certain specialized process chemicals, spare part sales and equipment sales and service; the materials division, which includes components used in construction and maintenance; and other, which includes finance, administration and corporate functions.

Segment operating results are measured based on net income (loss) before tax, adjusted if necessary, for certain segment specific items. There are no inter-segment sales. Identifiable assets are the Company's assets that are identified with classes of similar products or operations in each geographic region. Corporate assets include primarily cash, short- and long-investments and assets related to the administrative headquarters of the Company.

8. INCOME TAXES

At each balance sheet date, the Company assesses the recoverability of tax assets based on its ability to carryback the temporary differences to recover taxes previously paid, if any, or its ability to generate sufficient future taxable income in the relevant tax jurisdiction. If it is determined that the recoverability of the deferred tax asset is in doubt, a valuation allowance is recorded. During the quarter ended February 28, 2003, the Company recorded a valuation allowance of \$0.7 million against the tax assets in one jurisdiction. During the nine months ended February 28, 2003, the Company recorded valuation allowances of \$2.8 million against previously recorded deferred tax assets. At February 28, 2003, the Company had net deferred tax assets of \$4.5 million. The Company regularly updates its estimate of future taxable income in each jurisdiction, and these updates can result in changes in the valuation allowance.

9. RECENT ACCOUNTING PRONOUNCEMENTS

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

In July 2001, the Financial Accounting Standards Board (FASB) issued SFAS No. 143, *Accounting for Asset Retirement Obligations*, which addresses accounting and reporting for obligations associated with the retirement of tangible long-lived assets and the associated asset retirement costs. SFAS No. 143 is effective for fiscal years beginning after June 15, 2002. We are currently assessing the impact of SFAS No. 143 on our consolidated financial statements.

In October 2001, the FASB issued SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*. SFAS No. 144 supersedes SFAS No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-*

Lived Assets to be Disposed Of. SFAS No. 144 applies to all long-lived assets (including discontinued operations) and consequently amends APB No. 30, *Reporting the Results of Operations Reporting the Effects of Disposal of a Division of a Business*. SFAS No. 144 develops one accounting model for long-lived assets that are to be disposed of by sale and requires the measurement to be at the lower of book value or fair value, less the cost to sell the assets. Additionally, SFAS No. 144 expands the scope of discontinued operations to include all components of an entity with operations that (1) can be distinguished from the rest of the entity and (2) will be eliminated from the ongoing operations of the entity in a disposal transaction. SFAS No. 144 is effective for fiscal years beginning after December 15, 2001. The adoption of SFAS No. 144 did not have a significant impact on the Company's financial position or operating results.

In June 2002, the FASB issued SFAS 146, *Accounting for Exit or Disposal Activities*. SFAS 146 addresses significant issues regarding the recognition, measurement and reporting of costs that are associated with exit and disposal activities, including restructuring activities that are currently accounted for under EITF No. 94-3, *Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring)*. SFAS 146 also includes costs related to terminating a contract that is not a capital lease and termination benefits that employees who are involuntarily terminated receive under the terms of a one-time benefit arrangement that is not an ongoing benefit arrangement or an individual deferred-compensation contract. SFAS 146 will be effective for exit or disposal activities that are initiated after December 31, 2002 and early application is encouraged. SFAS 146 was adopted during the third quarter ended February 28, 2003. The effect on adoption of SFAS 146 was a change on a prospective basis of the timing of when restructuring charges are recorded from a commitment date approach to when the liability is incurred.

In December 2002, the FASB issued SFAS No. 148, *Accounting for Stock-Based Compensation - Transition and Disclosure - an amendment of FASB Statement No. 123*. SFAS No. 148 provides alternative methods of transition for a voluntary change to the fair value based method of accounting for stock-based employee compensation. SFAS No. 148 also requires that disclosures of the pro forma effect of using the fair value method of accounting for stock-based employee compensation be displayed more prominently and in a tabular format. Additionally, SFAS No. 148 requires disclosure of the pro forma effect in interim financial statements. The transition and annual disclosure requirements of SFAS No. 148 are effective for fiscal years ended after December 15, 2002. The interim disclosure requirements are effective for interim periods beginning after December 15, 2002. We have chosen to continue to account for stock-based compensation using the intrinsic value method prescribed in APB Opinion No. 25 and related interpretations. Accordingly, compensation expense for stock options is measured as the excess, if any, of the estimate of the market value of our stock at the date of the grant over the amount an employee must pay to acquire our stock. We will adopt the annual disclosure provisions of SFAS No. 148 in our financial reports for the year ended May 31, 2003 and will adopt the interim disclosure provisions for our financial reports for the quarter ending August 31, 2003. As the adoption of this standard involves disclosures only, we do not expect a material impact on our consolidated financial statements.

In November 2002, the FASB issued Interpretation No. 45 (FIN 45), *Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others*. FIN 45 requires a company, at the time it issues a guarantee, to recognize an initial liability for the fair value of obligations assumed under the guarantee and elaborates on existing disclosure requirements related to guarantees and warranties. The initial recognition requirements of FIN 45 are effective for guarantees issued or modified after December 31, 2002 and adoption of the disclosure requirements were effective for the Company during the third quarter ending February 28, 2003, which are presented in Note 1.

In November 2002, the Emerging Issues Task Force reached a consensus on EITF 00-21, *Accounting for Revenue Arrangements with Multiple Deliverables*. EITF 00-21 sets out criteria for whether revenue on a deliverable can be recognized separately from other deliverables in a multiple deliverable arrangement. The criteria considers whether the delivered item has stand-alone value to the customer, whether the fair value of the delivered item can be reliably determined and the rights of returns for the delivered item. EITF 00-21 must be

adopted by the Company by June 1, 2004. The Company is assessing the impact of EITF 00-21 on its consolidated financial position and results of operations.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The information in this Quarterly Report on Form 10-Q, including Management's Discussion and Analysis of Financial Condition and Results of Operations, except for the historical information, contains forward-looking statements. These statements involve known and unknown risks, uncertainties and other factors that may cause our, or our industry's, actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievements expressed or implied by the forward-looking statements, including the risk factors set forth in this report under *Part II, Item 5 Risks Related to Metron*. You should not place undue reliance on these forward-looking statements as actual results could differ materially. We do not assume any obligation to publicly release the results of any revision or updates to these forward-looking statements to reflect future events or unanticipated occurrences. This discussion and analysis should be read in conjunction with our Condensed Consolidated Financial Statements and the related Notes, included elsewhere in this report, and our Consolidated Financial Statements and the related Notes for our fiscal year ended May 31, 2002, which are included in Metron's Annual Report on Form 10-K for the fiscal year ended May 31, 2002, filed with the SEC.

Overview

Metron Technology N.V. is a holding company organized under the laws of The Netherlands. Through our various operating subsidiaries, we are a leading global provider of marketing, sales, service and support solutions to semiconductor materials and equipment suppliers and semiconductor manufacturers. We operate in Europe, Asia (except Japan) and the United States. We were founded in Europe in 1975 by our two corporate shareholders, who together owned approximately 33% of our shares as of February 28, 2003, and by certain of our former management. In 1995, we reorganized Metron to combine three Asian companies as reorganization under common control, and purchased Transpacific Technology Corporation (TTC) and its subsidiaries. TTC was founded in California in 1982 as a semiconductor equipment manufacturers' representative company and expanded into the equipment distribution business in 1990. In July 1998, we acquired T.A. Kyser Co., which we refer to as Kyser, in a transaction accounted for as a pooling of interests. Founded in 1977, Kyser markets and sells materials in nine states within the United States, principally to the semiconductor industry. In March 2000, we acquired Shieldcare Ltd., a company incorporated in Scotland, in a transaction accounted for as a purchase. Shieldcare is an authorized supplier of critical parts cleaning services to major OEM and device manufacturing companies worldwide. The company also operates as an authorized re-manufacturer of physical vapor deposition (PVD) equipment for a well-known supplier of automated systems for chemical vapor deposition (CVD). Effective November 17, 2000, we completed our acquisition of all the outstanding shares of Intec Technology (S) Pte. Ltd., a privately held company incorporated in Singapore. The transaction was accounted for as a purchase, and the results of operations of Intec have been included in our consolidated financial statements from December 1, 2000. Intec is a distributor of cleanroom products, and a manufacturer of cleanroom garments, and sells these products in Singapore and Malaysia. In March 2002, we purchased the AG Associates rapid thermal processing (RTP) product line and associated assets from Mattson Technology. In May 2002, we acquired certain assets of Advanced Stainless Technologies (AST), a small Texas-based manufacturer of electro-polished stainless steel tubing and fittings.

We derive our revenue from sales of materials, equipment, service and spare parts to the semiconductor industry, as well as from commissions on sales of equipment and materials. In general, we recognize revenue for most of an equipment sale and all other product sales upon the shipment of goods to customers. We defer a portion of our equipment revenue associated with our installation and warranty obligations. In some cases depending on the terms of the sale, we defer the entire amount attributable to the equipment or a portion of the sales price attributable to the equipment. We recognize installation revenue, and any deferred equipment revenue, upon technical acceptance of the equipment by the customer's fab personnel, and we amortize the deferred warranty revenue over the applicable warranty period. We recognize service revenue in the periods the services are rendered to customers.

In each of our three- and nine-month periods ended February 28, 2002 and 2003, a majority of our revenue came from the sale of products from six or fewer of the semiconductor materials and equipment companies we represent, whom we refer to as our principals. Revenue from the sale

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

of products manufactured by FSI was 6.3% and 14.5% of total revenue for the three months ended February 28, 2002 and 2003, respectively, and 12.8% and 11.4% of total revenue for the nine months ended February 28, 2002 and 2003, respectively. Revenue from the sale of products manufactured by Entegris was 13.2% and 11.3% of total revenue for the three months ended February 28, 2002 and

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

2003, respectively, and 12.2% and 13.7% of total revenue for the nine months ended February 28, 2002 and 2003, respectively. In August 2002, Cabot Microelectronics advised us of its decision to assume the direct distribution of its products in Europe and Singapore; the effective date of the transition will be June 1, 2003. Metron will continue to market Cabot Microelectronics products in Israel. Revenue from the sale of products manufactured by Cabot Microelectronics was 21.1% and 16.1% of total revenue for the three months ended February 28, 2002 and 2003, respectively, and 16.6% and 15.9% of total revenue for the nine months ended February 28, 2002 and 2003, respectively. In addition to representing two of our largest sources of revenue, FSI and Entegris are also our two largest shareholders as of February 28, 2003, holding 20.5% and 11.9%, respectively, of our outstanding shares. Although the principals that comprise our largest sources of revenue may change from period to period, we expect that revenue from the sale of products of a relatively small number of principals will continue to account for a substantial portion of our revenue for at least the next five years.

In October 2002, the Company and FSI entered into a transition agreement, which was subsequently amended, providing for the early termination of their distribution agreements in Europe and Asia, except that the Company will continue to take purchase orders for spare parts until April 15, 2003, in accordance with the terms of existing distribution agreements. Pursuant to the agreement, effective March 1, 2003 (the closing date), FSI assumed direct sales, service and applications support and logistics responsibilities for its surface conditioning and microlithography products in Europe and Asia, while the Company will continue to represent FSI products in Israel. The Company's revenues for FSI products and services in Europe and Asia were approximately \$5.9 million and \$8.6 million for the quarters ended February 28, 2002 and 2003, respectively, and \$23.7 million and \$21.9 million for the nine-month periods ended February 28, 2002 and 2003, respectively.

Under the terms of the transition agreement, during our second quarter FSI advanced \$3.0 million in cash to the Company, which was included in other current liabilities at February 28, 2003. On the closing date, the advance was applied toward the repurchase by FSI of inventory and equipment that the Company purchased under the current distribution arrangement. Additionally, FSI is required to pay to the Company an early termination fee. On April 7, 2003, the transition of the distribution agreements with FSI was completed. FSI will transfer to the Company 567,105 common shares of the Company, which is in addition to the \$3.0 million cash advance that the Company received in October of 2002. As a result, FSI's ownership of the Company's outstanding common shares changed from approximately 20.5% to approximately 16.2%.

We operate in all areas of the world in which there is a significant semiconductor industry, except Japan. The following tables show our sales in Europe, Asia and the United States in dollars and as a percentage of net revenue for each of the three and nine-month periods ended February 28, 2002 and February 28, 2003:

	Three months ended February 28,		Nine months ended February 28,	
	2002	2003	2002	2003
	(Dollars in thousands)

Asia	10,217	12,399	36,097	40,690
United States	10,746	14,326	42,439	51,275
Total net revenue	\$ 46,733	\$ 57,896	\$ 176,271	\$ 179,020

	Three months ended February 28,		Nine months ended February 28,	
	2002	2003	2002	2003
	(Percentage of net revenue)			
Net revenue				

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

Europe	55.1%	53.8%	55.4%	48.6%
Asia	21.9	21.4	20.5	22.7
United States	23.0	24.8	24.1	28.7
Total net revenue	100.0%	100.0%	100.0%	100.0%

We are organized into two worldwide operating divisions, equipment and materials. Our equipment division derives the majority of its revenue from the sale of capital equipment. The remainder of the division's revenue comes from service, which includes the installation, maintenance and repair of semiconductor equipment, spare part sales, certain specialized process chemicals sales and commissions. With the acquisition of Shieldcare and the AG Associates RTP products, we added new revenue categories: revenue from the cleaning of shields used in the manufacturing of semiconductors and revenue from the sale of legacy equipment that we manufacture ourselves. Our equipment sales represent products that support various production activities for the manufacture of semiconductors. The sales of the equipment division principally represent a small number of high-dollar value transactions. In the majority of cases where the equipment is externally sourced, *i.e.* is manufactured by one of our principals, the equipment is shipped directly to the customer by the manufacturer. As a result, our equipment revenues are significantly affected by the pattern of capital spending by customers, the timing of customer orders, the timing of product shipments by the equipment manufacturer and the timing of customer acceptances.

Our materials division derives the majority of its revenue from sales of materials and components. The remainder of the division's revenue comes from commissions. The materials and components we sell are used both in the production of semiconductors and in the building and maintenance of semiconductor equipment and manufacturing facilities. Materials include products such as wafer surface preparation materials, fluid-handling components such as fittings, valves and tubing, specialized process chemicals and disposable cleanroom clothing. While the majority of the materials division's revenue is derived from sales to the semiconductor industry, the division sells to other industry sectors including pharmaceutical, petroleum services and industrial products. Sales of materials tend to be less cyclical than sales of semiconductor equipment and generally offer higher gross margins than externally sourced equipment.

Critical Accounting Policies and Estimates

Metron's discussion and analysis of its financial condition and results of operations is based on the Company's consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States of America. The preparation of these financial statements requires the Company to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses and related disclosure of contingent assets and liabilities. On an on-going basis, the Company evaluates its estimates, including those related to revenue recognition, allowance for doubtful accounts, inventories, goodwill and income taxes. Metron bases its estimates on historical experience and on various other assumptions that we believe to be reasonable under the circumstances. Together these form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions.

Revenue recognition. We recognize revenue in accordance with SEC Staff Accounting Bulletin No. 101, *Revenue Recognition in Financial Statements* (SAB101). We have adopted specific and detailed guidelines for recognizing revenue. Nevertheless, certain judgments affect the application of our revenue policy. Most equipment sales are recorded as multiple element transactions in which the portion of the sale represented by the fair value of future installation and warranty services is deferred, and only the residual amount of the sale representing the equipment itself is recognized upon shipment to the customer. In certain circumstances, depending on the terms of the transaction, we also defer the entire transaction or a portion of the residual amount attributable to the equipment itself. The installation and warranty revenue we defer for each machine sold requires us to estimate the amount of time we expect it to take to install the equipment and to maintain the equipment during the warranty period. The estimated time is valued using the fair value of our service rates in each country. We review the adequacy of our estimates periodically and revise them as necessary. We recognize deferred installation revenue, and deferred equipment revenue, if any, when the customer accepts the equipment as production enabled in the fab. We recognize deferred warranty revenue ratably over the warranty period.

Valuation accounts. The Company maintains allowances for doubtful accounts for estimated losses resulting from the inability of its customers to make required payments. The estimate is based on our historical experience and our current assessment of the credit-worthiness of specific customers. The reserves are re-evaluated and adjusted at each balance sheet date as additional information is received that impacts the amount reserved.

The Company values its inventory at the lower of cost or market. The Company analyzes the composition of its inventory and identifies and evaluates slow-moving inventory to determine if reserves are required. Estimated required reserves are based on past usage and on assumptions about future demand and market conditions.

Goodwill. As a result of some of our business acquisitions, we had previously recorded approximately \$8.3 million in goodwill. The determination of the value of such intangible assets requires us to make estimates and assumptions regarding future cash flows by reporting unit. During fiscal 2002, we amortized \$1.3 million of goodwill. Statement of Financial Accounting Standards (SFAS) No. 142, *Goodwill and Other Intangible Assets* became effective on June 1, 2002. Goodwill is no longer being amortized with the adoption of SFAS 142. In lieu of amortization, we are required to perform an impairment review of our goodwill. Under the transition provisions of SFAS 142, the Company performed an assessment to determine if there was an indication that goodwill was impaired as of the date of adoption. Additionally, as a result of the Company's restructuring activities and an agreement providing for the early termination of the FSI distribution agreement as described in note 4 and note 6 to the Company's Condensed Consolidated Financial Statements, the Company performed an interim assessment of the carrying value of goodwill in the quarter ending November 30, 2002. The result of both assessments indicated that the carrying value of the Company's goodwill was not impaired.

The Company's market capitalization (share price quoted on NASDAQ multiplied by common shares outstanding) has been below net book value (NBV) since July 2002, and was substantially below NBV for the eight-month period ended February 28, 2003. As a result, the comparison for estimates of the fair value of the Company's assets and liabilities to the lower market capitalization indicated that the Company's carrying value of goodwill had been completely impaired. Accordingly, the Company charged \$8.3 million, the entire carrying value of goodwill, to the Company's statement of operations during the three-month period ended February 28, 2003.

Income taxes. As part of the process of preparing our consolidated financial statements, we are required to estimate our income taxes in each of the jurisdictions in which we operate. This process may result in the recording of deferred tax assets which represent temporary differences between the tax bases of assets and liabilities and financial statement amounts reported by each subsidiary, as well as operating loss and tax credit carryforwards. At each balance sheet date, we assess the recoverability of tax assets based on our ability to carryback the temporary differences to recover taxes previously paid, if any, or our ability to generate sufficient future taxable income in the relevant tax jurisdiction. If we determine the recoverability of the deferred tax asset is in doubt, we record a valuation allowance. We regularly update our estimate of future taxable income in each jurisdiction, and these updates can result in changes in the valuation allowance.

Results of Operations

During the fourth quarter of fiscal 1999, the semiconductor industry began to recover from the slowdown that began in the second half of 1996. The recovery continued through fiscal 2001, and we returned to profitability. However, in the fourth quarter of fiscal 2001, we began to experience order cancellations, delays in booking new orders and delays in shipping orders to customers, all of which contributed to the significant reduction in our revenue in fiscal 2002. This directly affected the sales of semiconductor capital equipment and the sales of materials. As a result of the decline in revenue, we recorded operating losses during the second and third quarters of fiscal 2002. While operations were slightly positive in our fourth quarter, we experienced an operating loss for fiscal 2002 as a whole. We believe that, despite short-term

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

slowdowns, the semiconductor industry has long-term growth opportunities. As a result, we believed we must maintain our infrastructure, even during periodic slowdowns, in order to continue to serve our customers and to be in a position to take advantage of long-term growth opportunities. Consequently, we did not reduce our operating expenses in the first and second quarters of fiscal 2003. However, we continued to incur operating losses during fiscal 2003. As a result, we announced in October 2002 plans to reduce approximately 125 of our employees in addition to the approximately 90 employees expected to transfer to FSI. As of February 28, 2003, we had terminated 124 employees, and, on March 1, 2003, we transferred 90 employees to FSI. During our fourth quarter of fiscal 2003, we expect to terminate additional employees and abandon additional leased facilities, which is expected to cause the Company to incur an additional \$2.0 million to \$2.5 million in restructuring costs. We expect that revenue for the fourth quarter of fiscal 2003 will be less than our third quarter revenues.

Our quarterly operating results have fluctuated significantly and are likely to continue to fluctuate significantly due to a number of factors including:

the timing of significant customer orders and customer spending patterns;

the timing of product shipments by our principals;

the loss of any significant customer or principal;

the timing of new product and service announcements by our principals and their competitors;

the mix of products sold and the market acceptance of our new product lines;

the efficiencies we are able to achieve in managing inventories of materials and spare parts;

the timing of expenditures intended to increase future sales of materials and equipment;

general global economic conditions or economic conditions in a particular region;

changes in pricing by us, our principals or our competitors;

changes in currency valuations relative to the U.S. dollar;

costs we may incur if we become involved in future litigation; and

other factors, many of which are beyond our control.

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

The following table presents certain consolidated statements of operations data as a percentage of net revenue for the three- and nine-month periods ended February 28, 2002 and February 28, 2003.

	Three months Ended February 28,		Nine months Ended February 28,	
	2002	2003	2002	2003
Net revenue	100.0%	100.0%	100.0%	100.0%
Cost of revenue	79.0	81.3	80.5	81.7
Gross margin	21.0	18.7	19.5	18.3
Selling, general, administrative and other expenses	26.6	24.7	22.3	24.0
Restructuring costs	0.9	2.1	0.6	1.7
Goodwill impairment		14.3		4.6
Other operating income, net of associated costs	2.9		2.3	0.8
Operating margin	(3.6)%	(22.4)%	(1.1)%	(11.2)%

The following table shows our materials division and equipment division revenue as an amount and as a percent of net revenue, together with the related gross margins:

	Three months Ended February 28,		Nine months Ended February 28,	
	2002	2003	2002	2003
(Dollars in millions)				
Net revenue				
Equipment division	\$ 19.5	\$ 29.2	\$ 86.2	\$ 85.8
Materials division	27.2	28.7	90.1	93.2
Net revenue				
Equipment division	41.8%	50.5%	48.9%	47.9%
Materials division	58.2	49.5	51.1	52.1
Gross margins				
Equipment division	23.1%	18.0%	19.7%	16.7%
Materials division	19.5	19.4	19.1	19.9

Three Months Ended February 28, 2003 Compared to Three Months Ended February 28, 2002

Net Revenue

Equipment division. The equipment division's net revenue for the three months ended February 28, 2003 was \$29.2 million, an increase of \$9.7 million or 49.7% from the three months ended February 28, 2002. The equipment group's revenues increased significantly as a result of realizing previously deferred equipment revenue for our current quarter. Increases in spare part and parts cleaning revenues were almost completely offset by the decrease in service revenues for the comparable quarters. Regionally, the majority of the revenue increase came from the equipment groups in Europe and the United States and the increase was only partially reduced by lower revenue in Asia.

Materials division. The materials division's net revenue for the three months ended February 28, 2003 was \$28.7 million, an increase of \$1.5 million or 5.5% from the three months ended February 28, 2002. The division recorded increased revenue in both Asia and the United States, however, revenue in Europe was lower. Materials revenues tend to track wafer starts, which were flat for the current quarter. Wafer starts are the number of new silicon wafers that semiconductor makers start to transform into semiconductor devices, and capacity utilization, which is the proportion of available capacity that semiconductor makers are using.

Gross Margins

Equipment division. The equipment division's gross margin for the three months ended February 28, 2003 was 18.0%, a decrease of 510 basis points (a basis point is 1/100 of 1%) as compared to the three months ended February 28, 2002.

The decrease was caused primarily by a decline in service margins. The gross margins for the equipment group within the division were higher as the result of Asia selling demonstration equipment, which typically have a lower inventory value than identical new equipment. The higher margins in equipment and spare parts were partially offset by a decrease in the parts cleaning margin. In addition, equipment commissions as a percentage of equipment revenue were relatively lower in the three months ended February 28, 2003.

Materials division. The gross margin of the materials division decreased 10 basis points to 19.4% for the three months ended February 28, 2003 compared to the three months ended February 28, 2002. An increase in the handling costs caused the margin decline. Regionally, margin increased in Europe and the United States, which offset the decrease in Asia.

Selling, General, Administrative and Other (SG&A) Expenses. SG&A expenses for the three months ended February 28, 2003 were \$14.3 million, up \$1.9 million or 15.3% from the \$12.4 million incurred in the three months ended February 28, 2002. Of the increase, \$1.1 million was due to personnel costs, which includes wages, incentive plans and social taxes on the wages. With the adoption of SFAS 142, goodwill is no longer being amortized, and, accordingly, for the three months

ended February 28, 2003, SG&A did not include any amortization of goodwill. The increase in the value of the EURO and British Pound over the last twelve months ending February 28, 2003 caused approximately a \$0.5 million increase in SG&A costs. SG&A expenses consist principally of salaries and other employment-related costs, travel and entertainment, occupancy, communications and computer-related expense, trade show and professional services and depreciation. Our SG&A expenses are a function principally of our total headcount. Over 56% of SG&A expenses consist of salaries and other employment-related costs. We expect SG&A will be lower in our fiscal fourth quarter as a result of our restructuring activities.

Restructuring costs. Restructuring costs of \$0.4 million incurred during our third quarter of fiscal 2002 represented an abandoned leasehold in the United States.

During our second quarter of fiscal 2003, as a result of continuing slow industry conditions, the Company announced plans to reduce the number of its employees by approximately 125 in addition to the employees that we expected would be transferred to FSI. During the quarter ended February 28, 2003, the Company incurred an additional \$1.2 million of the restructuring costs pertaining to the cost of terminating of 36 employees and the remaining lease commitments on the abandonment of certain facilities in both the equipment and materials segments. The total number of employees terminated as of February 28, 2003 was 124 people. The equipment division reduced its headcount by 66 employees, the materials division terminated 12 employees, and 46 terminated employees were part of finance and administration.

The Company expects to incur more restructuring costs to terminate additional employees and intends to cease using lease facilities in its fourth quarter, which is expected to cost between \$2.0 million to \$2.5 million.

Goodwill impairment. The Company's market capitalization (share price quoted on NASDAQ multiplied by common shares outstanding) has been below net book value (NBV) since July 2002, and was substantially below NBV for the eight-month period ended February 28, 2003. The comparison for estimates of the fair value of the Company's assets and liabilities to the lower market capitalization indicated that the Company's carrying value of goodwill was fully impaired. Accordingly, the Company charged \$8.3 million of goodwill, the entire carrying value, to the Company's statement of operations during the three-month period ended February 28, 2003.

Nine Months Ended February 28, 2003 Compared to Nine Months Ended February 28, 2002

Net Revenue

Equipment division. The equipment division's net revenue in the nine months ended February 28, 2003 was \$85.8 million, down slightly by \$0.5 million or 0.5% from the nine months ended February 28, 2002. Decreases in revenues in service and commission revenue, and equipment group revenue to a lesser extent, were almost offset by increases in revenue for spare parts and parts cleaning. Net revenues decline in Europe and Asia's, while the revenue increase in the United States almost offset the decline.

Materials division. The materials division's net revenue improved for the nine months ended February 28, 2003. Revenue was \$93.2 million, up \$3.2 million or 3.6% from the nine months ended February 28, 2002. Materials revenue increased significantly in Asia and to a lesser amount the United States, which more than offset reductions of revenue in Europe.

Gross Margins

Equipment division. The equipment division's gross margin decreased 300 basis points to 16.7% for the nine months ended February 28, 2003 when compared to the nine months ended February 28, 2002. The decrease in gross margin in fiscal 2003 was due principally to lower margins on service as a result of lower service revenues, a lower proportion of equipment commissions and the equipment group. The gross margin decline was partially offset by improvements in margins for spare parts and parts cleaning. The division margins dropped in the United States and Europe, while improving in Asia.

Materials division. The gross margin of the materials division increased 80 basis points to 19.9% for the nine months ended February 28, 2003 compared to the nine months ended February 28, 2002, even though handling costs increased. Margins in the United States and Europe increased, while reduction in Asia margins partially offset the margin gain.

Selling, General, Administrative and Other (SG&A) Expenses. SG&A expenses for the nine months ended February 28, 2003 were \$43.0 million, up \$3.7 million or 9.4% from the \$39.3 million incurred for the nine months ended February 28, 2002. Of the increase, \$2.6 million was due to personnel and related costs. With the adoption of SFAS 142, goodwill is no longer being amortized, and, accordingly, for the nine months ended February 28, 2003, SG&A did not include any amortization of goodwill. The higher value of the EURO and British Pound during the nine months ended February 28, 2003 compared to the nine months ended February 28, 2002 caused a \$1.0 million increase in SG&A costs. SG&A expenses consist principally of salaries and other employment-related costs, travel and entertainment, occupancy, communications and computer-related expense, trade show and professional services and depreciation. Our SG&A expenses are a function principally of our total headcount. Over 58% of SG&A expenses consist of salaries and other employment-related costs. We expect SG&A will be lower in our fourth quarter as a result of our restructuring activities.

Restructuring costs. Restructuring costs of \$1.1 million incurred during the nine-month period of fiscal 2002 represented termination costs for 56 employees and the abandonment of leased facilities in the United States. The equipment division reduced its headcount by 27 employees, the materials division terminated 17 employees, and 12 terminated employees were part of finance and administration.

During our second quarter of fiscal 2003, as a result of continuing slow industry conditions, the Company announced plans to reduce the number of its employees by approximately 125 in addition to the employees that we expected would be transferred to FSI. During our second and third quarters, the Company incurred \$3.0 million of restructuring costs pertaining to the cost of terminating 124 employees and the abandonment of certain leased facilities in both the equipment and materials segments. The equipment division reduced its headcount by 66 employees, the materials division terminated 12 employees, and 46 terminated employees were part of finance and administration.

The Company expects to incur more restructuring costs to terminate additional employees and intends to cease using lease facilities in its fourth quarter, which is expected to cost between \$2.0 million and \$2.5 million.

Goodwill impairment. The Company's market capitalization (share price quoted on NASDAQ multiplied by common shares outstanding) has been below net book value (NBV) since July 2002, and was substantially below NBV for the eight-month period ended February 28, 2003. The comparison for estimates of the fair value of the Company's assets and liabilities to the lower market capitalization indicated that the Company's carrying value of goodwill was fully impaired. Accordingly, the Company charged \$8.3 million of goodwill, the entire carrying value, to the Company's statement of operations during the three-month period ended February 28, 2003.

Other Operating Income, Net of Associated Costs. On January 8, 2001, we entered into an agreement with Entegris to modify our existing distribution relationship. On February 13, 2001, we entered into a transition agreement with Entegris whereby Entegris assumed direct sales responsibility for products from its Microelectronics Group in Europe beginning April 1, 2001, and in Asia beginning May 1, 2001. On March 1, 2001, we entered into a new distribution agreement with Entegris, under which we continue to distribute Entegris Fluid Handling Group product line in all regions in Europe, Asia, and parts of the United States covered under the previous distribution agreements. The new distribution agreement will be in effect until August 31, 2005.

As consideration for modifying the existing distribution agreement, Entegris transferred 1,125,000 Metron common shares it owned to us and agreed to make cash payments totaling \$1.8 million over a 15-month period. The total gain of \$8.3 million was recognized on a straight-line basis as other operating income over the period from the date of the modification, February 13, 2001 until August 31, 2002, which represented the remaining effective term of the original agreement. The common shares transferred by Entegris represented \$6,615,000 of the gain, which was equal to their fair market value on February 13, 2001.

Loss on impairment of investment. In our fiscal first quarter of 2002, we recorded a loss of \$0.4 million against our equity investment in Advanced Stainless Technologies (AST), a small Texas-based manufacturer of specialty stainless steel tubing. Like many suppliers to the semiconductor industry, AST has been adversely affected by the

swiftness and severity of the downturn, and with no recovery in sight, we recognized the estimated other than temporary impairment in the value of our investment.

Other Expense, net. The following table summarizes the components of other expense for the periods indicated.

	Three months Ended February 28,		Nine months Ended February 28,	
	2002	2003	2002	2003
	(Dollars in thousands)			
Foreign exchange gain (loss)	\$ 43	\$ (213)	\$ (126)	\$ (653)
Interest income	80	32	350	96
Interest expense	(254)	(282)	(942)	(822)
Miscellaneous income	161	112	258	142
Other expense, net	\$ 30	\$ (351)	\$ (460)	\$ (1,237)

We engage in limited hedging activities to reduce our exposure to exchange risks arising from fluctuations in foreign currency, but because hedging activities can be costly, we do not attempt to cover all potential foreign currency exposures. During the nine-month periods ended February 28, 2002 and 2003, we entered into contracts to hedge firm purchase commitments and certain net asset (liability) foreign currency exposures at our subsidiaries. The currencies in which we purchase forward exchange contracts have numerous market makers to provide ample depth and liquidity for our hedging activities.

Interest income represents primarily earnings on our available cash balances and amounts invested in short-term investments, which primarily resulted from the proceeds of our initial public offering. Our interest expense for the same periods increased primarily as the result of increased borrowings to support our working capital requirements.

Benefit for Income Taxes. The overall net tax benefit of \$0.7 million and \$0.9 million for the three and nine months ended February 28, 2003, respectively, was net of an increase in the valuation allowance for substantially tax assets for certain jurisdictions where recovery was in doubt of \$0.7 million and \$2.8 million, respectively.

Liquidity and Capital Resources

We define liquidity as our ability to generate resources to pay our current obligations and to finance our growth during periods of business expansion. Our principal requirement for capital is for working capital to finance receivables and inventories. Until we completed our initial public offering in late November 1999, our principal sources of liquidity were cash flow from operations and bank borrowings. Our working capital, current assets less current liabilities, at February 28, 2003 was \$42.1 million, \$8.0 million lower than our working capital at May 31, 2002 of \$50.1 million. Our current ratio, current assets divided by current liabilities, was 1.6 at May 31, 2002 and at February 28, 2003.

Operating Activities. In the nine months ended February 28, 2003, we generated cash totaling \$0.9 million from our operating activities. Our net loss plus non-cash income statement items totaled \$(7.5) million, while the net increase in assets and liabilities was \$8.4 million. In the nine months ended February 28, 2002, we generated cash totaling \$7.9 million from our operating activities. Our net loss plus non-cash income statement items totaled \$1.0 million, while the net increase in assets and liabilities was \$6.9 million.

Investing Activities. Our capital expenditures for property, plant and equipment totaled \$8.0 million in fiscal 2002. We invested \$3.9 million in our new operations management information system and approximately \$2.0 million in new a parts cleaning facility in The Netherlands. During the nine month period of fiscal 2003, our capital expenditures totaled \$2.6 million, of which \$0.8 million was incurred as additional costs for the management information system. To date, we have invested \$8.5 million in the new system, and we estimate the total cost will be \$12.0 to \$15.0 million over the next 24 months. We expect that our capital expenditures in fiscal 2003 will total approximately \$3.0 million.

Financing Activities. For the nine-month period ended February 28, 2002, we paid down \$4.1 million of the amounts we had borrowed on our credit facilities, and we received \$0.4 million from stock purchases through our employee stock purchase plan. For the nine-month period ended February 28, 2003, we paid down \$8.1 million of the amounts we had borrowed on our credit facilities, \$1.0 million of long-term debt, and we received \$0.2 million from stock purchases through our employee stock purchase plan.

Current and future position. As of February 28, 2003, the Company had \$11.3 million of cash and cash equivalents and \$11.5 million of short-term borrowings under its various lines of credit. At February 28, 2003, we were in violation of covenants with Compass Bank for which we obtained a waiver. In April 2003, Compass Bank agreed to extend its \$10 million facility through mid-May 2003. Certain of our credit facilities contain other covenants that require us to meet or maintain certain minimum ratios, and we currently expect to meet all such other financial covenants. However, a breach of a covenant in a credit facility could result in the lender demanding repayment of all or part of the related indebtedness and could impair our ability to obtain additional access to our current or alternate credit facilities.

All of our lines of credit are payable on demand or subject to periodic, generally semi-annual or annual, review. In April, we renewed our credit facilities in Singapore of \$2.0 million and in Germany of \$2.7 million until February and March 2004, respectively. While we believe that our current lines of credit will continue to be available to the Company through at least fiscal 2003, given recent developments in our business and industry, we cannot give any assurance that our lenders will agree to continue to make these facilities available to the Company on terms or in amounts acceptable to the Company, or at all. In particular, we cannot assure you that the Compass Bank facility will continue to be available to the Company after mid May 2003 on favorable terms, or at all. Any inability on our part to retain our existing credit facilities or enter into replacement facilities could impair the Company's ability to fund its current operations and to achieve its longer-term business objectives. If one or more of our significant credit facility lenders demands repayment of all or a significant portion of the related indebtedness, it is unlikely that the Company would have the cash resources necessary to repay such indebtedness when due.

While our current cash flow projections indicate that our current cash and cash equivalents, amounts available under currently available lines of credit and anticipated cash from operations should be sufficient to meet our working capital needs through the end of fiscal 2003, in order to improve the Company's working capital position, we seek to raise from external sources \$4.0 million to \$10.0 million over the next six months. However, if our cash flows do not meet our projections or our current credit facilities do not continue to be available to the Company, and we do not succeed in raising additional working capital, the Company could have insufficient working capital to meet the Company's cash needs for fiscal 2004.

If quarterly revenues increase materially, we will also need to raise additional working capital from external sources to permit us to conduct our operations in the ordinary course of business through fiscal 2003. We also intend to seek additional financing during fiscal 2003 to meet the Company's working capital requirements for fiscal 2004. While we currently believe that we can raise additional working capital as needed, we cannot give any assurance that working capital will be available on terms acceptable to the Company, or at all. While the Company does not currently intend to issue additional equity securities or debt securities convertible into equity to address our current need for working capital, if we determine that we need to do so, the issuance of additional equity or debt securities convertible into equity is likely to result in significant dilution to our existing shareholders, and the new equity securities may have rights, preferences and privileges that are senior to those of our existing common shares. In July 2002, in order to provide the Company with financing flexibility, we filed a shelf registration statement covering up to \$15 million of common shares. It may be necessary to raise additional funds through strategic transactions, in which event we may cease conducting or relinquish rights to a portion of our current business. Strategic transactions may not be available on terms that are favorable to us from a longer-term perspective.

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

In addition to the liquidity issues associated with our need for capital from external sources, our ability to generate our anticipated cash flow from operations is subject to the risks and uncertainties discussed under Part II, Item 5 Risks Related to Metron. These risks include, in particular, our dependence upon a few key principals and a relatively small number of customers for a majority of our revenue, variations in the amount of time it takes for us to sell our products and collect accounts receivable and in the timing of customer orders and risks associated with the semiconductor industry and its periodic downturns.

In addition to our intent to raise capital to fund our current operations in fiscal 2003 and 2004, we may need to raise additional capital through public or private sales of equity and/or additional borrowings for significant

acquisitions, significant capital expenditures or other extraordinary transactions. We do not currently have any specific plans, agreements or commitments related to any such significant transaction and are not currently engaged in any negotiations related to any such transaction. We have no plans to pay any dividends on our common shares and intend to retain all of our future profits to fund future growth. If we cannot raise additional funds, if needed, on acceptable terms, we may not be able to develop our business, take advantage of future opportunities or respond to competitive pressures or unanticipated requirements, all of which could seriously harm our business and results of operations. The issuance of additional equity or debt securities convertible into equity could result in dilution to our existing shareholders.

Our forecast of the period of time through which our financial resources are expected to be adequate to support our operations is a forward-looking statement. This statement involves known and unknown risks, uncertainties and other factors that may cause our, or our industry's, actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievements expressed or implied by the forward-looking statements. These factors are listed under Part II, Item 5 Risks Related to Metron and elsewhere in this Report on Form 10-Q. The following table summarizes our contractual cash obligations as of February 28, 2003:

Contractual Obligations and Commercial Commitments	Total	Less than 1 Year	Payments Due By Period		
			2 3 Years	4 5 Years	After 5 Years
			(Dollars in thousands)		
Long-term debt including current portion	\$ 1,817	\$ 140	\$ 816	\$ 861	\$
Short-term borrowing obligations	11,328	11,328			
Operating lease obligations	24,677	5,471	7,412	6,816	4,978
Commercial commitments	26,279	26,279			
Other long-term liabilities	3,221		751	20	2,450
Total contractual obligations and commercial commitments for cash	\$ 67,322	\$ 43,218	\$ 8,979	\$ 7,697	\$ 7,428

Transactions with related parties:

Two of Metron's shareholders, FSI and Entegris, owned approximately 20.5%, and 11.9%, respectively, of the outstanding shares of the Company as of February 28, 2003. After taking into account the transfer from FSI to the Company of 567,105 common shares pursuant to the transition agreement, FSI will own approximately 16.2% of the outstanding shares of the Company. The Company purchases goods from these shareholders and their subsidiaries for resale in the normal course of business under terms and conditions similar to those with unrelated vendors. For the nine months ended February 28, 2003, such purchases totaled approximately \$26.3 million. At February 28, 2003, sales to affiliates were \$1.6 million. At May 31, 2002 and February 28, 2003, amounts payable to these affiliates were \$5.8 million and \$7.7 million, respectively. At May 31, 2002 and February 28, 2003, amounts receivable from these affiliates were \$0.2 million and \$0.3 million, respectively.

In July 1995, an officer/Managing Director of Metron entered into a Tax Indemnification Agreement (TIA) with the Company as part of its acquisition of Transpacific Technology Corporation. At the time of the acquisition and until it completed its initial public offering in November 1999, Metron was a controlled foreign corporation under Subpart F of the US Internal Revenue Code (Subpart F), and, as a US person, the officer/director was liable for personal income tax on income imputed to him under Subpart F. Under the agreement, the Company has provided cash advances for taxes due for Subpart F income that totaled \$0.3 million. Under the TIA, the officer/Managing Director is

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

required to repay these advances only to the extent that he benefits from the increase in the tax basis of his holding of Metron common shares. Accordingly, in fiscal 2001, the Company recorded a reserve of \$0.2 million against these advances. Repayment of a portion of the advances is required beginning with the first sale of shares owned by the officer/Managing director.

In conjunction with the acquisition of T.A. Kyser Co., we assumed a note from a shareholder for purchase of retired treasury shares. The note had a remaining balance of \$62,000 at May 31, 2002, an annual interest rate of 6.65% and was paid in July 2002.

Borrowing Facilities:

The following table summarizes our material borrowing facilities as of February 28, 2003:

	U.S. \$ Equivalent Facility Amount	Amount Currently Outstanding (Dollars in thousands)	Amount Available	Recent Interest Rate
Compass Bank	\$ 10,000	\$ 6,630	\$ 3,370	3.85%
HSBC	2,000		2,000	2.75 to 5.0%
Deutsche Bank	2,690	596	2,094	3.0 to 9.0%
Royal Bank of Scotland	3,951	2,803	1,148	5.25%
Bank Leumi	1,482	996	486	4.5%
All Others	2,579	596	1,983	3.5 to 8.5%
Total	\$ 22,702	\$ 11,621	\$ 11,081	

Effect of Currency Exchange Rate and Exchange Rate Risk Management

A significant portion of our business is conducted outside of the United States through our foreign subsidiaries. While many of our international sales are denominated in United States dollars, some are denominated in various foreign currencies. To the extent that our sales and operating expenses are denominated in foreign currencies, our operating results may be adversely affected by changes in exchange rates. Owing to the number of currencies involved, the substantial volatility of currency exchange rates, and our constantly changing currency exposures, we cannot predict the effect of exchange rate fluctuations on our future operating results. Although we engage in foreign currency hedging transactions from time to time, these hedging transactions can be costly, and therefore, we do not attempt to cover all potential foreign currency exposures. These hedging techniques do not eliminate all of the effects of foreign currency fluctuations on anticipated revenue.

Market Risk

At February 28, 2003, we had aggregate forward exchange contracts in various currencies as follows:

Currency	Amount Bought US \$000	Amount Sold US \$000	Weighted Average Contract Rate (Dollars in thousands)	Fair Value	Expiration Date
Euro	3,987		1.06	\$ 12	June 2003
Israeli Shekel		5,453	4.88	(19)	March 2003

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

Japanese Yen	3,462	125.52	13	April 2003
Singapore Dollar	1,776	1.73	(3)	March 2003
Korean Won	524	0.81	(23)	April 2003
			\$	(20)

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

See Effect of Currency Exchange Rate and Exchange Rate Risk Management and Market Risk under Part I, Item 2 of this report.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Based on their evaluation of our disclosure controls and procedures (as defined in Exchange Act Rules 13a-14(c) and 15d-14(c)) conducted within 90 days of the date of filing this quarterly report, the Company's Chief Executive Officer and Chief Financial Officer have concluded that the Company's disclosure controls and procedures were adequate and effective to ensure that material information relating to the Company, including its consolidated subsidiaries, was made known to them by others within those entities, particularly during the period in which this quarterly report was being prepared.

Changes in Internal Controls

There were no significant changes in the Company's internal controls or in other factors that could significantly affect these controls subsequent to the date of their evaluation, nor were there any significant deficiencies or material weaknesses in the Company's internal controls.

Limitations on the Effectiveness of Controls.

The Company's management, including the chief executive officer and chief financial officer, does not expect that the Company's disclosure controls and procedures or the Company's internal controls will prevent all error and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. The inherent limitations in all control systems include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

Not applicable.

ITEM 2. CHANGES IN SECURITIES AND USE OF PROCEEDS

(a) Not applicable.

(b) Not applicable.

(c) Not applicable.

(d) Not applicable.

ITEM 3. DEFAULTS UPON SENIOR SECURITIES

Not applicable.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

Not applicable.

ITEM 5. OTHER INFORMATION

RISK FACTORS

Our business faces significant risks. These risks include those described below and may include additional risks and uncertainties not presently known to us or that we currently believe are immaterial. If any of the events or circumstances described in the following risks occurs, our business, operating results or financial condition could be materially adversely affected. These risks should be read in conjunction with the other information set forth in this report.

Risks related to Metron.

We may not be able to meet certain covenants in or renew our credit facilities.

As of February 28, 2003, the Company had \$11.5 million of short-term borrowings under its various lines of credit. Certain of our credit facilities contain financial covenants that require us to meet and maintain certain minimum ratios. At February 28, 2003, we were in violation of covenants in the United States for which we obtained a waiver. We intend to pursue discussions with our lenders to further waive, modify or, possibly, eliminate, certain financial covenants in our credit facilities. However, we cannot give any assurance that the lenders will agree to modify or eliminate such covenants or that we can comply with the covenants and meet the financial tests of our credit facilities, even if and as modified. A breach of a covenant in a credit facility could result in the lender demanding repayment of all or part of the related indebtedness and could impair our ability to obtain additional access to our current or alternate credit facilities.

All of our lines of credit are payable on demand or subject to periodic, generally annual, review. In April, we renewed our credit facilities in Singapore of \$2.0 million and in Germany of \$2.7 million until February and March 2004, respectively. While we believe that our current lines of credit will continue to be available to the Company through at least fiscal 2003, given recent developments in our business and industry, we cannot give any assurance that our lenders will agree to continue to make these facilities available to the Company on terms or in amounts acceptable to the Company, or at all.

In particular, we cannot assure you that the Compass Bank facility will continue to be available to the Company after mid-May 2003 on favorable terms, or at all.

Any failure to retain our existing credit facilities or enter into replacement facilities would impair the Company's ability to fund its current operations and to achieve its longer-term business objectives. If one or more of our significant credit facility lenders demands repayment of all or a significant portion of the related indebtedness, it is unlikely that the Company would have the cash resources necessary to repay such indebtedness when due.

We may need to raise additional capital, and any inability to raise required funds could harm our business.

As of February 28, 2003, the Company had \$11.3 million of cash and cash equivalents and \$11.5 million of short-term borrowings under its various lines of credit. While our current cash flow projections indicate that our current cash and cash equivalents, amounts available under currently available lines of credit and anticipated cash from operations should be sufficient to meet our working capital needs through the end of fiscal 2003, in order to improve the Company's working capital position, we seek to raise from external sources at least \$4.0 million to \$10.0 million over the next six months. However, if our cash flows do not meet our projections or our current credit facilities do not continue to be available to the Company, and we do not succeed in raising additional working capital, the Company may have insufficient working capital to meet the Company's cash needs for fiscal 2004.

If quarterly revenues increase materially, we will also need to raise additional working capital from external sources to permit us to conduct our operations in the ordinary course of business through fiscal 2003. We also intend to seek additional financing during fiscal 2003 to meet the Company's working capital requirements for fiscal 2004.

At February 28, 2003, we were in violation of covenants with Compass Bank for which we obtained a waiver. In April 2003, Compass Bank agreed to extend its \$10 million facility through mid-May 2003. We cannot give any assurance that working capital will be available on terms acceptable to the Company, or at all. While the Company does not currently intend to issue additional equity securities or debt securities convertible into equity to address our current need for working capital, if we determine that we need to do so, the issuance of additional equity or debt

securities convertible into equity is likely to result in significant dilution to our existing shareholders, and the new equity securities may have rights, preferences and privileges that are senior to those of our existing common shares. In July 2002, in order to provide the Company with financing flexibility, we filed a shelf registration statement covering up to \$15 million of common shares. It may be necessary to raise additional funds through strategic transactions, in which event we may cease conducting or relinquish rights to a portion of our current business. Strategic transactions may not be available on terms that are favorable to us from a longer-term perspective.

In addition to the liquidity issues associated with our need for capital from external sources, our ability to generate our anticipated cash flow from operations is subject to risks and uncertainties, including the risks and uncertainties discussed in these **Risks Related to Metron**.

In addition to our intent to raise capital to fund our current operations in fiscal 2003 and 2004, we may need to raise additional capital through public or private sales of equity and/or additional borrowings for significant acquisitions, significant capital expenditures or other extraordinary transactions. If we cannot raise additional funds, if needed, on acceptable terms, we may not be able to develop our business, take advantage of future opportunities or respond to competitive pressures or unanticipated requirements, all of which could seriously harm our business and results of operations. The issuance of additional equity or debt securities convertible into equity could result in dilution to our existing shareholders.

Our forecast of the period of time through which our financial resources are expected to be adequate to support our operations is a forward-looking statement. This statement involves known and unknown risks, uncertainties, and other factors that may cause our, or our industry's, actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievements expressed or implied by the forward-looking statements. These factors are discussed in these **Risks Related to Metron** and elsewhere in this Report on Form 10-Q.

We are dependent on a few key principals for a majority of our revenue; therefore, the loss of or change in our relationship with one or more of our key principals could seriously harm our business.

If, for any reason, any of our key principals were to materially reduce its business or terminate its relationship with us, the loss of the key principal would have a material adverse effect on our business. In particular, if our commercial relationship with FSI or Entegris were to materially change or were terminated, (for example, as described in the following paragraphs) our business would be significantly adversely affected due to the large percentage of our revenue generated by sales of these companies' products. For the nine-months ended February 28, 2003, 11.4% of our total revenue was generated from the sale of products manufactured by FSI, 13.7% represented the sale of products manufactured by Entegris and 15.9% represented the sale of products manufactured by Cabot Microelectronics. For more information about our relationships with FSI and Entegris, see also the risk titled **We are significantly controlled by FSI and Entegris, which may limit your ability to influence the outcome of director elections and other shareholder matters**. In each of our last three fiscal years, a majority of our revenue came from the sale of products from six or fewer of our principals, which is how we refer to the semiconductor materials and equipment companies we represent. Although the principals that comprise our largest sources of revenue may change from period to period, we expect that revenue from the sale of products of a relatively small number of principals will continue to account for a substantial portion of our revenue for at least the next five years.

In October 2002, the Company and FSI entered into a transition agreement, which was subsequently amended, providing for the early termination of their distribution agreements in Europe and Asia. Effective March 1, 2003 (closing date), FSI will assume direct sales, service and applications support and logistics responsibilities for its surface conditioning and microlithography products in Europe and Asia, except that the Company will continue to take purchase orders for spare parts until April 15, 2003, in accordance with the terms of the exiting distribution agreements, while Metron will continue to represent FSI products in Israel. The Company's revenues for FSI products and services in Europe and

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

Asia were approximately \$23.7 million and \$21.9 million for the nine-month period ended February 28, 2002 and 2003, respectively, and \$36.0 million for the year ended May 31, 2002.

Under the terms of the transition agreement, during the second quarter FSI advanced \$3.0 million in cash to Metron, which was included in other current liabilities at February 28, 2003. On the closing date of the agreement, the advance was applied toward the repurchase by FSI of inventory and equipment that Metron acquired under the current distribution arrangement. Additionally, FSI was required to pay to Metron on the closing date of the agreement an

early termination fee. On April 7, 2003, the transition of the distribution agreements with FSI was completed. FSI will transfer to the Company 567,105 common shares of the Company, which is in addition to the \$3.0 million cash advance that the Company received in October of 2002. As a result, FSI's ownership of the Company's outstanding common shares changed from approximately 20.5% to approximately 16.2%.

All of the semiconductor materials, equipment and products we market, sell, service and support are sold pursuant to agreements with our principals. These agreements are generally cancelable at will, subject to notification periods that range from 30 days to two years. We generally do not sell competing products in the same market, and, therefore, the number of principals we can represent at any one time is limited. It is likely that in the future some of our principals will terminate their relationships with us upon relatively short notice. If we lose a key principal, we may not be able to find a replacement quickly, or at all. The loss of a key principal may cause us to lose customers and incur expenses associated with ending our agreement with that principal. We may lose principals for various reasons, including:

mergers and acquisitions involving our principals and other semiconductor materials and equipment manufacturers that we do not represent;

a principal's decision to attempt to build a direct sales organization;

the expansion of a principal's product offerings to compete with the products of another principal, because we generally do not offer competing product lines;

a principal's dissatisfaction with our level or quality of service; and

the failure of a principal's business.

We have lost principals in the past. For example, in March 1999, A.G. Associates was acquired by Steag. As a result of this acquisition, we ceased marketing and selling A.G. Associates' products in September 1999. In July 1999, FSI sold its chemical management division to BOC Edwards. As a result of this divestiture, we no longer market and sell these products. In October 1999, Applied Materials acquired Obsidian. As a result of the acquisition, Obsidian terminated its agreement with us. In January 2001, we entered into an agreement with Entegris, Inc. to modify our existing distribution relationship, whereby Entegris assumed direct sales responsibility for products from its Microelectronics Group in Europe beginning April 1, 2001, and in Asia beginning May 1, 2001. In May 2002, by mutual agreement, we terminated our distributor agreement with August Technology. In August 2002, Cabot Microelectronics advised us of its decision to assume the direct distribution of its products in Europe and Singapore; the effective date of the transition will be June 1, 2003. Metron will continue to market Cabot Microelectronics products in Israel. In October 2002, FSI advised us of its decision to assume the direct distribution of its products in Europe (except Israel) and Asia; the effective date of the transition will be March 1, 2003.

The semiconductor industry is highly cyclical, and during its periodic downturns, our operating results will deteriorate.

The semiconductor industry is highly cyclical and historically has experienced periodic downturns, which often have resulted in decreased expenditures by semiconductor manufacturers. These downturns generally have adversely affected the sales, gross profits and operating results of semiconductor materials and equipment suppliers. Our business depends in large part on the procurement expenditures of semiconductor manufacturers, which, in turn, depend on the current and anticipated demand for semiconductors and products utilizing semiconductors. The downturn in the semiconductor industry from mid-1996 until the end of 1998 had a material adverse effect on our operating results. In February 2001, we started to experience a downturn in new orders, as well as delays in shipment for existing orders. The continuation of the downturn for any extended period, or an increase in the number of shipment delays, would have a materially adverse effect on our operating results.

We may not be able to successfully implement our restructuring efforts, and such efforts may adversely impact our ability to retain and attract future employees.

In October 2002, we announced that we would be reducing our workforce by approximately 125 employees worldwide. The total number of employees terminated as of February 28, 2003 was 124 people and, on March 1, 2003,

we transferred 90 employees to FSI. During our fourth quarter of fiscal 2003, we expect to terminate additional employees and abandon additional leased facilities, which is expected to cause the Company to incur an additional \$2.0 million to \$2.5 million in restructuring costs. Workforce reductions, including the one we announced in October 2002, could result in a temporary lack of focus and reduced productivity by our remaining employees, which in turn may affect our revenues in the current or a future quarter. In addition, prospects and current customers may decide to delay or not purchase our products due to the perceived uncertainty caused by our reduction in force. We cannot assure you that we will not reduce or otherwise adjust our workforce again in the future or that the related transition issues associated with such a reduction will not occur again. Further, we believe that our future success will depend in large part upon our ability to attract and retain highly skilled personnel. We may have difficulty attracting such personnel as a result of a perceived risk of future workforce reductions.

If we are unable to successfully identify new products and enter into and implement arrangements with the suppliers of these products, our business will be seriously harmed.

To the extent we are unable to enter into relationships with principals who anticipate or respond adequately to technological developments or customer requirements, we could suffer a loss of competitiveness. Such loss, or any significant delays in product development or introductions by these principals, could have a materially adverse effect on our business. The semiconductor materials and equipment market is subject to rapid technological change, changing customer requirements and frequent new product introductions. Because of this, the life cycle of products that we market and sell is difficult to determine. Our future success will depend to a significant extent on our principals' ability to keep pace with changes in the market and, particularly because we generally do not carry competing product lines, on our ability to identify and obtain new product lines which achieve market success.

We face intense competition from companies with significantly greater financial, technical and marketing resources, which could adversely affect our ability to maintain or increase sales.

We face intense competition on two distinct fronts: competition for product lines and competition for customers.

If we are unable to compete successfully for product lines against independent sales and distribution companies that have greater financial resources, are more established or have longer-standing relationships with semiconductor materials and equipment manufacturers, we will be unable to offer competitive products, which will negatively impact our sales.

We compete with independent sales and distribution companies for the right to sell specific product lines in specific territories. We believe that our most formidable competition comes from regionally established semiconductor materials and equipment distribution companies. Some of these independent sales and distribution companies have substantially greater financial resources to devote to a particular region than we do, are better established in particular regions than we are, have greater name recognition in their chosen markets than we have and have long-standing collaborative business relationships with semiconductor materials and equipment manufacturers which are difficult to overcome. If we are unable to effectively compete with sales and distribution companies to attract and retain principals, our business will be adversely affected.

If we are unable to compete for customers owing to our inability to provide sales, marketing and support services or particular product offerings, our ability to maintain or increase sales will be adversely affected.

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

We compete for orders from semiconductor manufacturers with established semiconductor materials and equipment manufacturers who sell directly to customers and with independent sales and distribution companies and sales representatives. We believe that to compete effectively for customers we must maintain a high level of investment in marketing, customer service and support in all of the markets in which we operate, and we may not have sufficient financial resources, technical expertise or marketing, services and support capabilities to continue to compete successfully in the future. Some of our competitors have greater name recognition in the territories they serve and have long-standing relationships with semiconductor manufacturers that may give them an advantage in attracting and retaining customers. Furthermore, we believe that once a semiconductor manufacturer has selected a particular product for a specific use from a vendor that is not one of our principals, it may be difficult to achieve significant sales of a competing product to that customer unless there are compelling reasons for the customer to switch products, such as significant performance or cost advantages.

We anticipate that as we continue to diversify our product portfolio and expand into new markets for our principals' products, we will encounter additional competition for customers. If we cannot continue to compete successfully for customers in the future, any such lack of success will have a significant negative impact on our business.

The management information systems that we currently use in our day-to-day operations are not integrated across the globe and some of them need to be upgraded. Upgrading them will be costly, and if the new system is not successfully implemented, our business may suffer material adverse consequences.

While our financial reporting management information system is integrated and operational, the current management information systems that we use to control our day-to-day operations are not integrated across the globe. To accommodate growth in the past, we have had to hire additional people to compensate for the lack of a fully-functional, integrated operations management information system. We are currently investing in a new operations management information system in order to maintain our current level of business and accommodate any future growth. We went live with the first implementation of the new system in The Netherlands in April 2001, in France in July 2001, in Italy in October 2001, in the United Kingdom and Ireland in February 2002, and in Germany in June 2002. We currently anticipate that the total costs associated with the implementation of the new system will be approximately \$12.0 to \$15.0 million and that the system will be fully implemented over the next 24 months. Any failure to successfully implement our new operations management information system may result in delayed growth, increased inefficiency due to a lack of centralized data, higher inventories, increased expenses associated with employing additional employees, a loss of our investment in the new operations management information system and may have additional material adverse effects on our business.

We need to successfully manage the anticipated expansion in our operations or our business may suffer material adverse consequences.

To the extent we are unable to effectively manage future expansion and the system and procedural transitions required by expansion, our business and our operating results could be seriously harmed. We have expanded our operations in the past and anticipate future expansion of our operations through acquisitions and otherwise. Our growth has placed and will continue to place significant demands on our management, operational, financial and technical resources, as well as our accounting and control systems, as we work to integrate geographically dispersed offices and administrative personnel, diverse service and maintenance operations and different accounting and financial systems. Our future operating results will depend on the ability of our management and other employees to:

implement and improve our operational, customer support and financial control systems;

recruit, train, manage and motivate our employees;

identify companies that are strategic acquisition candidates and successfully acquire and integrate them with our existing business;

communicate information efficiently throughout our organization; and

work effectively with principals and customers.

We cannot predict whether these efforts will be successful or will occur in a timely or efficient manner. We may not be able to install adequate control systems in an efficient and timely manner, and our current or planned operational systems, procedures and controls may not be adequate to support our future operations. The difficulties associated with installing and implementing new systems, procedures and controls may place a significant burden on our management and our internal resources. Delays in the implementation of new systems or operational disruptions when we transition to new systems would impair our ability to accurately forecast sales demand, manage our product inventory and record and report financial and management information on a timely and accurate basis.

We may not be successful in any effort to penetrate Japan, which could limit our future growth.

We do not market and sell products to semiconductor manufacturers in Japan. However, approximately 21% of the world's production of semiconductors in 2001 took place in Japan. Accordingly, to reach all of the world's major semiconductor markets, we will need to establish or acquire sales, marketing and/or service capabilities in Japan. Historically, it has been difficult for non-Japanese companies to succeed in establishing themselves in Japan. On April 8, 2003, we announced the opening of Metron Technology (Japan) K.K. (Metron Japan) in Yokohama, Japan and the appointment of Hideshige Yamashita to the newly-created position of President of Metron Japan. We intend Metron Japan to serve as our headquarters for building partnerships with original equipment manufacturers (OEMs) in Japan and to provide service and outsource solutions in the local market. In addition, both FSI and Entegris have existing arrangements for the sale, service and support of their products in Japan and have not indicated that they would modify these arrangements in the event that Metron establishes or acquires sales and marketing capabilities in Japan. We cannot predict whether our efforts to penetrate the Japanese market will be successful. If we are not successful in our efforts to penetrate the Japanese market, our future growth may be limited.

We expect continued downward pressure on the gross margins of the products we sell, and as a result, if we are unable to continue to decrease our operating expenses as a percentage of sales or find replacement product lines with higher gross margins, we will be unable to increase or maintain our operating margins.

Particularly during industry down cycles, pressure on the gross margins of the products we sell is intense and can adversely impact our financial performance. We have experienced significant downward pressure on our gross margins, mainly as a result of sales discounts offered by our competitors and pressure from our customers to reduce prices and from our principals to reduce the discounts they provide to us. This, in turn, has put significant downward pressure on our operating margins. To maintain or increase our gross margins, we must develop and maintain relationships with principals who introduce new products and product enhancements on a timely basis. As a result of continued pressure on gross margins, we must find ways to decrease our selling, general, administrative and other expenses as a percentage of sales to increase or maintain our operating margins. If our principals cannot continue to innovate, if we cannot maintain our relationships with innovating principals, if we cannot otherwise identify product lines with higher gross margins or if we cannot successfully manage our selling, general, administrative and other expenses, our operating margins may decrease. If our operating margins decline as a result of these factors, our business would be harmed.

Our employment costs in the short-term are to a large extent fixed, and therefore any cyclical revenue shortfall could adversely affect our operating results.

Our operating expense levels are based in significant part on our head count, which is generally driven by longer-term revenue goals. For a variety of reasons, particularly the high cost and disruption of lay-offs and the costs of recruiting and training, our head count in the short-term is, to a large extent, fixed. In addition, approximately half of our employees are in Europe, and the costs associated with any reductions of our labor force in Europe are high. As a result of these factors, we were unable to reduce employment costs in a timely manner to compensate for the cyclical revenue or gross margin shortfall we have suffered during the current downturn, which has had a material adverse effect on our operating results. Although we announced in October 2002 that we would be reducing our workforce by approximately 125 employees worldwide, we cannot assure you that we will be able to reduce employment costs sufficiently to compensate for future cyclical revenue shortfall.

We may bear inventory risk due to an inability to return products, and if we are unable to manage our inventory effectively, our operating results could be adversely affected.

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

We bear inventory risk because we generally take title to the products we sell when we receive them from our principals, and we cannot always return products to the principal in the event the products are not sold. Our customers do not always purchase at the time or in the quantities we originally anticipated. For example, as a result of the industry downturn in 1997 and 1998, we had excess inventory for which we booked reserves in both the United States and Asia. Typically, products cannot be returned to principals after they have been in our inventory for a certain period of time; this time period varies depending on the product and the principal. In addition, although it is typical when a relationship with a principal terminates for that principal to repurchase most of the inventory we have of that principal's products, it is possible under certain circumstances that a principal may be unable or unwilling to repurchase our inventory. If we fail to manage our inventory and accumulate substantial product that cannot be returned, our operating results could be adversely affected. Furthermore, if a principal cannot provide refunds in cash for the inventory we desire to return, we may be forced to dispose of inventory below cost, and this may have a material adverse effect on our financial results.

Our revenue and operating results may fluctuate in future periods, which could adversely affect our share price.

In the past, we have experienced fluctuations in our quarterly and annual operating results and anticipate that these fluctuations will continue in the future due to a variety of factors, many of which are outside our control. Fluctuations in our results could cause our share price to decline substantially. We believe that period-to-period comparisons of our results of operations may not be meaningful, and you should not rely upon them as indicators of our future performance. Our sales in, and the operating results for, a particular quarter can vary significantly due to a variety of factors, including those described elsewhere in this report and the following:

The Timing Of Significant Customer Orders And Customer Spending Patterns. During industry downturns, our customers may ask us to delay or even cancel the shipment of previously firm orders. Delays and cancellations may adversely affect our operating results in any particular quarter if we are unable to recognize revenue for particular sales in the quarter in which those sales were expected.

The Timing Of Product Shipments By Our Principals. For the most part, we recognize sales upon the shipment of goods to our customers. Most of the equipment and some of the materials we sell are shipped by the principal directly to our customers, and we do not necessarily have any control over the timing of a particular shipment. If we are unable to recognize revenue for a particular sale in the quarter in which that sale was expected, our operating results in that particular quarter will be negatively affected.

The Timing Of New Product And Service Announcements By Our Principals And Their Competitors. New product announcements by our principals and their competitors could cause our customers to delay a purchase or to decide to purchase products of one of our principal's competitors which would adversely affect our revenue and, therefore, our results of operations. New product announcements by others may make it necessary for us to reduce prices on our products or offer more service options, which could adversely impact operating margins and net income.

The Mix Of Products Sold And The Market Acceptance Of Our New Product Lines. The mix of products we sell varies from period to period, and because margins vary amongst and/or within different product lines, this can adversely affect our results of operations. If we fail to sell our products that generate higher margins, our average gross margins may be lower than expected. If we fail to sell our new product lines, our revenue may be lower than expected.

General Global Economic Conditions Or Economic Conditions In A Particular Region. When economic conditions in a region or worldwide worsen, customers may delay or cancel their orders. There may also be an increase in the time it takes to collect from our customers or even outright defaults in payments. This can negatively affect our cash flow and our results.

Costs We May Incur If We Become Involved In Future Litigation. Litigation is often costly, and even if we are successful in defending or making any claim, the expenses incurred may significantly impact our results.

Charges to Earnings for Other Long Lived Assets, and Tax Deferred Assets. As a result of our market capitalization being less than our shareholders' equity, we may be required to recognize an impairment charge in connection with the carrying value of our long-lived assets. We also may need to provide additional valuation allowances for our tax deferred assets for jurisdictions where the recovery of the is in doubt. Each of these events could negatively impact our results.

As a result of the factors listed above, our future operating results are difficult to predict. Further, we base our current and future expense plans in significant part on our expectations of our longer-term future revenue. As a result, we expect our expense levels to be relatively fixed in the short-run. A decline in revenue for a particular quarter may disproportionately affect our net income in that quarter. If our revenue is below our projections, then our operating results will also be below expectations and, as we have in the past, we may even have losses in the short-run. Any one of the factors listed above, or a combination thereof, could adversely affect our quarterly results of operations, and consequently may cause a decline in our share price.

We depend on sales to a relatively small number of customers for a significant portion of our revenue, and if any of our large customers were to stop or reduce their purchasing from us, this would materially and adversely affect our revenue.

A loss or a significant reduction or delay in sales to any of our major customers could materially and adversely affect our revenue. We depend on a small number of customers for a substantial portion of our revenue. In fiscal 2002, our top ten customers accounted for an aggregate of 41% of our sales. Although a ranking by revenue of our largest customers will vary from period to period, we expect that revenue from a relatively small number of customers will account for a substantial portion of our revenue in any accounting period for the foreseeable future. Consolidation in the semiconductor industry may result in increased customer concentration and the potential loss of customers as a result of acquisitions. Unless we diversify and expand our customer base, our future success will significantly depend upon certain factors which are not within our control, including:

the timing and size of future purchase orders, if any, from our larger customers;

the product requirements of our customers; and

the financial and operational success of our customers.

If any of our largest customers were to stop or reduce their purchasing from us, our financial results could be adversely affected. A significant decrease in sales to a major customer or the deferral or cancellation of any significant order would have a material adverse effect on our operating results.

Our sales cycle, particularly for equipment, is long and unpredictable, which could require us to incur high sales and marketing expenses with no assurance that a sale will result.

Sales cycles for some of our products, particularly equipment, can run as long as 12 to 18 months. As a result, we may not recognize revenue from efforts to sell particular products for extended periods of time, or at all. We believe that the length of the sales cycle may increase as some current and potential customers of our key principals centralize purchasing decisions into one decision-making entity. We expect this may intensify the evaluation process and require us to make additional sales and marketing expenditures with no assurance that a sale will result.

We have recently expanded our operations to include manufacturing, an activity of which we do not have significant experience. This new activity will require us to hire managers and employees with different skills from those of our existing employees and to develop systems to manage processes of which we have no prior experience.

We now manufacture, under license from the original equipment manufacturer, Varian sputtering (PVD) equipment, licensed from Novellus, and AG Associates rapid thermal processing (RTP) equipment, licensed from Mattson. Prior to our entry into what is commonly called the

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

legacy equipment business, we did not manufacture any equipment. With our entry into this business, we have had to hire managers and other employees who have different skills from those of our existing employees. We have also had to install new systems to keep track of manufacturing inventories. As a consequence of our lack of experience, our newly initiated manufacturing activity may incur unanticipated costs, and we may not realize the gross margins that we planned to in making the necessary investments. In May 2002, we acquired certain assets of Advanced Stainless Technologies (AST), a Texas-based manufacturer of electro-polished stainless steel tube and fittings. We had no prior experience of operating a plant such as AST's, and we may incur unexpected costs in connection with AST's business.

We have not yet developed a strategy to sell to our customers over the Internet, and if a competitor develops and implements an effective e-commerce strategy, we may lose some of our customers, which would have a negative impact on our results of operations.

Although we have begun efforts to develop an e-commerce strategy, we have not implemented a process to sell to our customers over the Internet. Because our principals grant us the right to sell their products only for specific territories and sales conducted over the Internet may occur anywhere around the globe, it is difficult to adopt e-commerce practices in our industry. If our principals decide to directly distribute their products over the Internet, if our competitors develop a successful strategy for engaging in e-commerce or if our customers require e-commerce

capabilities which we are unable to provide, we may lose customers, which would have a negative impact on our revenue and on our operating results.

Risks related to our international operations.

Economic difficulties in countries in which we sell our products can lead to a decrease in demand for our products and impair our financial results.

The volatility of general economic conditions and fluctuations in currency exchange and interest rates can lead to decreased demand in countries in which we sell products. For example, in 1997 and 1998 many Asian countries experienced economic and financial difficulties. During this period, we experienced cancellation or delay of orders for our products from customers in Asia, which adversely affected our results of operations. Moreover, any economic, banking or currency difficulties experienced by countries in which we have sales may lead to economic instability in those countries. This in turn may result in the cancellation or delay of orders for our products from customers in those countries, thus adversely affecting our results of operations.

Most of our product sales are outside the United States, and currency fluctuations may impair our financial results.

While most of our international sales are denominated in United States dollars, some are denominated in various foreign currencies. To the extent that our sales and operating expenses are denominated in foreign currencies, our operating results may be adversely affected by changes in exchange rates. For example, in the second quarter of fiscal 2002, we recorded exchange losses of approximately \$470,000. Given the number of currencies involved, the substantial volatility of currency exchange rates, and our constantly changing currency exposures, we cannot predict the effect of exchange rate fluctuations on our future operating results. Although we engage in foreign currency hedging transactions from time to time, these hedging transactions can be costly, and, therefore, we do not attempt to cover all potential foreign currency exposures. These hedging techniques do not eliminate all of the effects of foreign currency fluctuations on anticipated revenue.

Risks related to investing in our common shares.

We are significantly controlled by FSI and Entegris, which may limit your ability to influence the outcome of director elections and other shareholder matters.

As of February 28, 2003, FSI owned 20.5%, and Entegris owned 11.9% of our outstanding shares. By virtue of their share ownership, FSI and Entegris can exercise significant voting control over Metron. As a result, each of these shareholders has significant influence over all matters requiring shareholder approval, including the election of directors, which may have the effect of delaying or preventing a third party from acquiring control over us. In connection with the transition agreement with FSI, FSI has agreed to transfer 567,105 of the Company's common shares as part of the consideration for the termination fee. The transfer of these shares will reduce FSI's ownership of the Company's common shares to approximately 16.2%.

Our share price is volatile.

The trading price of our common shares is subject to wide fluctuations in response to various factors, some of which are beyond our control, including factors discussed elsewhere in this report and the following:

failure to meet our publicly stated expectations or the published expectations of securities analysts for a given quarterly period;

changes in financial estimates by securities analysts;

changes in market values of comparable companies;

stock market price and volume fluctuations, which are particularly common among securities of high technology companies;

stock market price and volume fluctuations attributable to inconsistent trading volume levels;

additions or departures of key personnel; and

commencement of our involvement in litigation.

In the past, securities class action litigation has often been brought against a company following periods of volatility in the market price of its securities. We may in the future be the target of similar litigation. Securities litigation may result in substantial costs and divert management's attention and resources, which may seriously harm our business.

We do not intend to pay dividends.

We have never declared or paid any cash dividends on our capital shares. We currently intend to retain any future earnings to fund our growth and, therefore, do not expect to pay any dividends in the foreseeable future.

Risks related to being a Dutch company.

Our Supervisory Board has the authority to issue shares without shareholder approval, which may make it more difficult for a third party to acquire us.

As a Netherlands *Naamloze Vennootschap*, or N.V., we are subject to requirements not generally applicable to corporations organized in United States jurisdictions. Among other things, under Netherlands law, the issuance of shares of an N.V. must be approved by the shareholders unless the shareholders have delegated the authority to issue shares to another corporate body. Our articles of association provide that the shareholders have the authority to resolve to issue shares, common or preferred. The shareholders may designate the Company's Supervisory Board as the corporate body with the authority to adopt any resolution to issue shares, but this designation may not exceed a period of five years. Our articles also provide that as long as the Supervisory Board has the authority to adopt a resolution to issue shares, the shareholders will not have this authority. Pursuant to the Metron articles, the Supervisory Board has the authority to adopt resolutions to issue shares until five years from the November 19, 1999, deed of conversion from a B.V. to an N.V. and the related amendment of our articles of association. This authorization of the Supervisory Board may be renewed by the shareholders from time to time. As a result, our Supervisory Board currently has the authority to issue common and preferred shares without shareholder approval unless such approval is required under the terms of our Nasdaq listing agreement.

The issuance of preferred shares could have the effect of making it more difficult for a third party to acquire, or of discouraging a third party from acquiring, a majority of the outstanding shares of our share capital.

It may not be possible to enforce United States judgments against Netherlands corporations, directors and others.

Our articles provide that Metron has two separate boards of directors, a Managing Board and a Supervisory Board. A significant percentage of our assets are located outside the United States. Furthermore, judgments of United States courts, including judgments against us, our directors or our officers predicated on the civil liability provisions of the federal securities laws of the United States, are not directly enforceable in The Netherlands.

Provisions of our charter documents and Dutch law could discourage potential acquisition proposals and could delay, deter or prevent a change in control.

Our articles of association and the applicable law of The Netherlands contain provisions that may be deemed to have anti-takeover effects. These provisions may delay, defer or prevent a takeover attempt that a shareholder might consider in the best interest of our shareholders. For example, our articles may be amended only pursuant to a proposal of the Supervisory Board followed by a resolution of a general meeting of shareholders. To amend our articles requires that at a general meeting of shareholders, (1) more than half of the issued share capital is represented and (2) the resolution to amend the articles is supported by a two-thirds majority of the valid votes cast. This supermajority voting requirement may have the effect of discouraging a third party from acquiring a majority of the outstanding Metron shares. In addition, these provisions could have a negative impact on our stock price. Furthermore, some United States tax laws may discourage third parties from accumulating significant blocks of our common shares.

Special Note Regarding Forward-Looking Statements

Some of the statements under the captions Risk Factors, Management's Discussion and Analysis of Financial Condition and Results of Operations elsewhere in this Form 10-Q are forward-looking statements. These statements involve known and unknown risks, uncertainties, and other factors that may cause our, or our industry's, actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievements expressed or implied by the forward-looking statements, including the factors described under Item 5 Other Risk Factors and elsewhere in this Annual Report on Form 10-Q.

In some cases, you can identify forward-looking statements by terminology such as expects, anticipates, intends, may, should, plans, believes, seeks, estimates, could, would or the negative of such terms or other comparable terminology.

Although we believe that the expectations reflected in the forward-looking statements are reasonable, we cannot guarantee future results, levels of activity, performance or achievements. Moreover, neither we nor any other person assumes responsibility for the accuracy and completeness of these statements. We do not assume any obligation to publicly release the results of any revision or updates to these forward-looking statements to reflect future events or unanticipated occurrences.

ITEM 6. EXHIBITS AND REPORTS ON FORM 8-K

(a) Exhibits

99.1* Certification (pursuant to Section 906 of the Sarbanes-Oxley Act of 2002).

(b) Reports on Form 8-K

The Company did not file any reports on Form 8-K during the quarter ended February 28, 2003.

* This certification accompanies this Quarterly Report on Form 10-Q and shall not be deemed filed by Metron for purposes of Section 18 of the Securities and Exchange Act of 1934, as amended.

SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

METRON TECHNOLOGY N.V.

Date: April 14, 2003

/s/ DOUGLAS J. McCUTCHEON

Douglas J. McCutcheon
Senior Vice President and Chief Financial Officer
Signing on behalf of the registrant
and as principal accounting officer

Edgar Filing: METRON TECHNOLOGY N V - Form 10-Q

I, Edward D. Segal, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Metron Technology N.V.;

2. Based on my knowledge, this quarterly report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this quarterly report;

3. Based on my knowledge, the financial statements, and other financial information included in this quarterly report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this quarterly report;

4. The registrant's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-14 and 15d-14) for the registrant and we have:
 - a) designed such disclosure controls and procedures to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this quarterly report is being prepared;

 - b) evaluated the effectiveness of the registrant's disclosure controls and procedures as of a date within 90 days prior to the filing date of this quarterly report (the "Evaluation Date"); and

 - c) presented in this quarterly report our conclusions about the effectiveness of the disclosure controls and procedures based on our evaluation as of the Evaluation Date;

5. The registrant's other certifying officers and I have disclosed, based on our most recent evaluation, to the registrant's auditors and the audit committee of registrant's board of directors (or persons performing the equivalent function):
 - a) all significant deficiencies in the design or operation of internal controls which could adversely affect the registrant's ability to record, process, summarize and report financial data and have identified for the registrant's auditors any material weaknesses in internal controls; and

 - b) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal controls; and

6. The registrant's other certifying officers and I have indicated in this quarterly report whether or not there were significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to the date of our most recent evaluation, including any corrective actions with regard to significant deficiencies and material weaknesses.
