**FORM 51-102F3  
MATERIAL CHANGE REPORT**

**Item 1 Name and Address of Company**

Cameco Corporation ( Cameco )  
2121-11<sup>th</sup> Street West, Saskatoon, Saskatchewan S7M 1J3

**Item 2 Date of Material Change**

July 20, 2007

**Item 3 News Release**

The English version and the French translation version of the news release relating to this material change were distributed and filed by CCN Mathews through their Canadian Timely Disclosure Pack and U.S. Timely Disclosure Pack on July 20, 2007.

**Item 4 Summary of Material Change**

On July 20, 2007, Cameco announced that during a construction project it discovered uranium and evidence of other production-associated chemicals in the soil beneath its Port Hope uranium hexafluoride (UF<sub>6</sub>) conversion plant. The affected area appears to be within, and near, the perimeter walls of the UF<sub>6</sub> plant based on the preliminary information available on July 20, 2007. Ongoing subsoil investigations are expected to provide additional information. Cameco has suspended operations at the UF<sub>6</sub> conversion plant and a thorough investigation is being conducted. The chemicals are in a contained area so public health and worker safety are not affected. All regulatory authorities have been notified. Cameco plans to meet scheduled deliveries of UF<sub>6</sub> for the remainder of the year based upon existing inventory.

**Item 5 Full Description of Material Change**

See attached new release.

**Item 6 Reliance on subsection 7.1(2) or (3) of National Instrument 51-102.**

Not applicable.

**Item 7 Omitted Information**

Not applicable.

**Item 8 Executive Officer**

Gary M.S. Chad  
Senior Vice-President, Governance, Legal and Regulatory Affairs, and  
Corporate Secretary  
Cameco Corporation  
(306) 956-6303

**Item 9 Date of Report**

July 25, 2007

### Reports Chemicals Found Below Conversion Building

Saskatoon, Saskatchewan, Canada, July 20, 2007 . . . . .

**Cameco Corporation** reported today that during a construction project it discovered uranium and evidence of other production-associated chemicals in the soil beneath its Port Hope uranium hexafluoride (UF<sub>6</sub>) conversion plant. The affected area appears to be within, and near, the perimeter walls of the UF<sub>6</sub> plant based on the preliminary information available at this time. Ongoing subsoil investigations are expected to provide additional information. Cameco has suspended operations at the UF<sub>6</sub> conversion plant and a thorough investigation is being conducted. The chemicals are in a contained area so public health and worker safety are not affected.

The discovery was made in an area being excavated within the building for the installation of new equipment. Cameco and third-party experts are investigating to determine the source of the chemicals. In addition, holes are being drilled around the area and the soil and ground water are being tested to ascertain the area affected. All regulatory authorities have been notified.

Due to the nature of soil at the plant, Cameco expects the ground water flow rate, with the chemicals, to average approximately 40 to 60 metres each year. The perimeter of the plant is about 70 metres from the edge of the property. This provides ample time to address, contain and mitigate the affected area. Cameco has monitoring wells around the property to detect chemicals in the area. These wells are checked quarterly and reported to the regulator annually. The last scheduled samples were taken in April and did not indicate potential issues. Cameco has arranged for additional samples to be taken.

Full production of UF<sub>6</sub> will likely be suspended for a minimum of two months until Cameco has determined the source of the chemicals and developed appropriate plans. There is no cost estimate for this activity available at this time. Uranium dioxide (UO<sub>2</sub>) conversion and other activities at the site are not affected.

Cameco is assessing the impact of this situation on its production forecasts and will provide a revised forecast in its second quarter report.

The company plans to meet scheduled deliveries for the remainder of the year based on existing inventory.

Cameco is not planning layoffs and will look for alternate assignments for employees. There are approximately 420 employees at the Port Hope conversion facility.

Cameco, with its head office in Saskatoon, Saskatchewan, is the world's largest uranium producer. The company's uranium products are used to generate electricity in nuclear energy plants around the world, providing one of the cleanest sources of energy available today. Cameco's shares trade on the Toronto and New York stock exchanges. Statements contained in this news release, which are not historical facts, are forward-looking statements that involve risks, uncertainties and other factors that could cause actual results to differ materially from those expressed or implied by such forward-looking statements. Factors that could cause such differences, without limiting the generality of the following, include: the impact of the sales volume of fuel fabrication services, uranium, conversion services, electricity generated and gold; volatility and sensitivity to market prices for uranium, conversion services, electricity in Ontario and gold; competition; the impact of change in foreign currency exchange rates and interest rates; imprecision in decommissioning, reclamation, reserve and tax estimates; environmental and safety risks including increased regulatory burdens and long-term waste disposal; unexpected geological or hydrological conditions; adverse mining conditions; political risks arising from operating in certain developing countries; terrorism; sabotage; a possible deterioration in political support for nuclear energy; changes in government regulations and policies, including tax and trade laws and policies; demand for nuclear power; replacement of production; failure to obtain or maintain necessary permits and approvals from government authorities; legislative and regulatory initiatives regarding deregulation, regulation or restructuring of the electric utility industry in Ontario; Ontario electricity rate regulations; natural phenomena including inclement weather conditions, fire, flood, underground floods, earthquakes, pit wall failure and cave-ins; ability to maintain and further improve positive labour relations; strikes or lockouts; operating performance, disruption in the operation of, and life of the company's and customers' facilities; decrease in electrical production due to planned outages extending beyond their scheduled periods or unplanned outages; success of planned development projects; and other development and operating risks.

Although Cameco believes that the assumptions inherent in the forward-looking statements are reasonable, undue reliance should not be placed on these statements, which only apply as of the date of this report. Cameco disclaims any intention or obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.
