Form 20-F
June 27, 2008

June 26, 2008

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION WASHINGTON, D.C. 20549

FORM 20-F

REGISTRATION STATEMENT PURSUANT TO SECTION 12(b) or 12(g) OF THE *SECURITIES EXCHANGE ACT OF 1934*

OR

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE *SECURITIES EXCHANGE ACT OF 1934*
for the fiscal year ended December 31, 2007

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE *SECURITIES EXCHANGE ACT OF 1934*

OR

SHELL COMPANY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE *SECURITIES EXCHANGE ACT OF 1934*

Date of event requiring this shell company report _____

For the transition period from _____ to _____

Commission file number 000-51411

EMGOLD MINING CORPORATION
(Exact Name of the Registrant as Specified in its Charter)

BRITISH COLUMBIA, CANADA
(Jurisdiction of incorporation or organization)

Suite 1400, 570 Granville Street
Vancouver, British Columbia, Canada, V6C 3P1
(Address of principal executive offices)

Securities registered or to be registered pursuant to Section 12(b) of the Act:

Edgar Filing: EMGOLD MINING CORP - Form 20-F

Title of each class

Name of each exchange on which registered

None

None

Securities registered or to be registered pursuant to Section 12(g) of the Act:

Common Shares without par Value
(Title of class)

1

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act.

None

(Title of class)

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report.

156,489,642

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes

No

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes

No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act.

Large Accelerated Filer

Accelerated Filer

Non-Accelerated Filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

Certain statements in this Annual Report under the captions Risk Factors , Business Overview , Operating and Financial Review and Prospects and Quantitative and Qualitative Disclosures about Market Risk and elsewhere in this Annual Report and the documents attached as exhibits constitute forward-looking statements within the meaning of the United States securities laws. Some forward-looking statements may be identified by such terms as believes, anticipates, intends or expects. These forward-looking statements are based on the Company's current expectations and projections about future events and financial trends affecting the financial condition of its business and the industry in which it operates. Such forward-looking statements involve known and unknown risks, uncertainties and other factors, which may cause the actual results, performance or achievements of the Company, or industry results to be materially different from any future results, performance, or achievements expressly or implied by such forward-looking statements and the Company expressly disclaims any obligation to revise or update forward-looking statements in respect of actual results, performance or achievements. Such factors include, among others, the following: general economic and business conditions, which will, among other things, impact demand for gold and other metals; industry capacity; the ability of the Company to implement its business strategy; changes in, or the unintentional failure to comply with, government regulations (especially safety and environmental laws and regulations); changes in the uses of gold and other metals; gold and commodity price volatility; increased competition; mining risks; exploration programs not being successful; inability to obtain financing; inability to obtain or, cancellation of, government permits; changes to regulations and mining law; increased reclamation obligations; title defects with respect to properties; risks associated with international operations; and foreign exchange and currency fluctuations.

Conversion of metric units into imperial equivalents is as follows:

<u>Metric units</u>	<u>Multiply by</u>	<u>Imperial units</u>
Hectares	2.471	= acres
Metres	3.281	= feet
Kilometres	0.621	= miles (5,280 feet)
Grams	0.032	= ounces (troy)
Tonnes	1.102	= tons (short) (2,000 lbs)
grams/tonne	0.029	= ounces (troy)/ton

CAUTIONARY NOTE TO U.S. INVESTORS

This Annual Report uses the terms "measured resources" and "indicated resources." We advise U.S. investors that while such terms are recognized and permitted under Canadian regulations, the U.S. Securities and Exchange Commission does not recognize them. U.S. investors are cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted into reserves.

This Annual Report may use the terms inferred resources. We advise U.S. investors that while such term is recognized and permitted under Canadian regulations, it is not recognized by the U.S. Securities and Exchange Commission. Inferred resources have a significant amount of uncertainty as to their existence, and uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules estimates of inferred mineral resources may not form the basis of feasibility or other economic studies. **U.S. investors are cautioned not to assume that any part or all of an inferred resource exists, or is economically or legally mineable.**

S.E.C. Industry Guide

National Instrument 43-101

Reserve: That part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination. The United States Securities and Exchange Commission requires a final or full Feasibility Study to be completed in order to support either Proven or Probable Reserves and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified. Note that for industrial mineral properties, in addition to the Feasibility Study, sales contracts or actual sales may be required in order to prove the project's commerciality and reserve status.

Proven Reserves: Reserves for which a quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling of the sites for inspection, sampling and measurement are on mining, processing, metallurgical, economic, and spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well established.

Probable Reserves: Reserves for which quantity and grade and/or quality are computed from information similar to that used for proven reserves, but the sites for inspection, sampling and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.

Mineral Reserve: The economically mineable part of a Measured or Indicated Mineral Resource demonstrated by at least a Preliminary Feasibility Study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified.

ITEM 3.

KEY INFORMATION

A.

Selected Financial Data

The selected financial data of Emgold Mining Corporation (Emgold or the Company) for the years ended December 31, 2007, 2006, and 2005 was derived from the Company s consolidated financial statements audited by PricewaterhouseCoopers LLP, Chartered Accountants, as indicated in the audit report included elsewhere in this Annual Report.

The selected financial data should be read in conjunction with the consolidated financial statements and other financial information included elsewhere in the Annual Report.

The Company has not declared any dividends on its common shares since incorporation and does not anticipate that it will do so in the foreseeable future. The present policy of the Company is to retain future earnings for use in its operations and the expansion of its business.

The following table constitutes selected financial data for Emgold, which has been prepared in accordance with Canadian Generally Accepted Accounting Principles (GAAP), the application of which differs in certain material respects from United States GAAP (US GAAP). Differences affecting the consolidated financial statements of the Company are outlined in Note 14 to the consolidated financial statements.

See Item 17 for accompanying consolidated financial statements prepared in accordance with Canadian generally accepted accounting principles (Cdn GAAP) for further details, including Note 14 that reconciles Cdn GAAP to US GAAP.

Edgar Filing: EMGOLD MINING CORP - Form 20-F

In this Annual Report on Form 20-F, unless otherwise specified, all dollar amounts are expressed in United States Dollars. The table below sets forth the exchange rates versus the Canadian Dollar at the end of the five most recent fiscal years ended December 31, the average rates for the period and the range of high and low rates for the period. The data for each of the last six months is also disclosed.

For the purposes of this table, the rate of exchange means the noon Bank of Canada rate in foreign currencies. The table sets forth the number of Canadian Dollars required under that formula to buy one U.S. Dollar. The average rate means the average of the exchange rates on the last day of each month during the period.

Risk Factors

Financial Risk Factors

Emgold currently has no source of operating cash flow and has a history of operating losses. Emgold currently has no revenue from operations and all of its mineral property interests are in the exploration or development stages. The Company does not expect to receive significant revenue from operations at any time in the near future, and Emgold has had no prior years' history of earnings or operating cash flow. Neither Emgold nor its predecessors have paid dividends on their shares since incorporation and the Company does not anticipate doing so in the foreseeable future.

Emgold has no source of revenue other than interest income and future income tax recoveries. A mining project can typically require five to ten years or more between discovery, definition, development and construction and as a result, no production revenue is expected from any of the Company's exploration properties in the foreseeable future. All of Emgold's short to medium-term operating and exploration expenses must be paid from its existing cash position or external financing. At December 31, 2007, Emgold had working capital of \$4,563,485 compared to working capital of \$2,474,301 at December 31, 2006. Working capital is defined as current assets less current liabilities.

Emgold may not be able to find equity investment to further fund Golden Bear Ceramics to commercialize the Ceramext® technology for application at the Idaho-Maryland Mine Project, Emgold's most significant asset. The Company is in the process of converting its wholly-owned subsidiary, Golden Bear Ceramics Company (Golden Bear), into an independent operating entity. The Company has decided to finance the commercialization

of Golden Bear and the Ceramext® technology separately from Emgold to allow Golden Bear to pursue opportunities for growth on a global basis and construct a series of production plants. Accordingly, the Company has focused expenditures on Ceramext® to maintaining and completing U.S. and international patents, permitting activities, financing activities, and maintaining the Ceramext® license agreement until separation from Emgold is completed and Golden Bear is independently financed. The Company is focussed on completing the permitting for the I-M Project, which as presently planned includes a 1,200 ton per day stone and ceramics manufacturing facility which may be the first commercial plant to be constructed by Golden Bear. The Company's budget for fiscal 2008 and 2009 encompasses these risks, but there is no guarantee that the planned activities will be successful. If the Company is unable to obtain equity or some other form of financing to continue the commercialization of the Ceramext® technology, its successful application to the Idaho Maryland Mining Project (I-M Project) may be at risk.

Emgold may be unable to obtain the funds necessary to expand exploration. If Emgold's exploration and research and development programs are successful, additional capital will be required to place the I-M Project into commercial production. To date, the only sources of funds that have been available to the Company are from the sale of equity capital or the offering by the Company of an interest in its properties to be earned by another party or parties carrying out further development thereof. We presently do not have sufficient financial resources to undertake all of the Company's plans as outlined in previous periods, and require additional financing to complete the permitting of the I-M Project and start the engineering studies to enable the I-M Project to enter the feasibility stage of development. In spite of the current value of gold, the market conditions in the junior mining and exploration sector is very depressed and therefore it is very difficult raising additional capital. We have been successful in the past in obtaining financing through the sale of equity securities, but as an exploration stage company, it may be difficult to obtain adequate financing in the future or financings with favourable terms. If we fail to obtain additional financing on a timely basis, the Company could forfeit its interest in its mineral property interests, dilute its interests in the properties and/or reduce or terminate operations. Exploration programs would have to be prioritized to fit within cash availability.

Currently the Company is reviewing strategies for private placement financing that will carry the Company through the next year of operations. The financing if completed would result in dilution of the Company's shares. Funds from any private placements will be used primarily for permitting at the I-M Project. Separate financing paths are being pursued for Golden Bear and the commercialization of the Ceramext® process. Golden Bear will not be able to conduct further research and development or prepare marketing and feasibility studies until it has independently raised sufficient financing for that purpose. Golden Bear is planning on completing a detailed feasibility study and basic engineering by utilizing independent consultants to design the first commercial plant. This external study will be used by Golden Bear to finance the development and possible commercialization of the Ceramext® process.

Changes in the market prices of gold, which have fluctuated widely, will affect our operations and can impact the economic viability of the mineral properties. Emgold has no history of mining or current source of revenue. The Company is exploring for gold, and historically, the prices of the common shares of junior mining companies are very volatile. This volatility may be partly attributed to the volatility of gold prices, and also to the success or failure of the Company's exploration programs. The market price of gold may not remain at current levels. In particular, an increase in worldwide supply, and consequent downward pressure on prices, may result over the longer term from increased gold production from mines developed or expanded as a result of current metal price levels.

The prices of common shares of gold exploration companies are indirectly tied to gold prices which have fluctuated in the past ten years. This affects exploration activity. The ability to raise funds for exploration and development in a venture capital company is affected by factors such as the price of gold, a factor over which the Company has no control. Annual average, high and low gold prices since 1996 are shown below, demonstrating the fluctuation in the price of gold. Metals prices also affect the rate of return of a mining property that reaches the development stage over the longer term.

Year	Average Price per ounce (US\$)	High Price per ounce (US\$)	Low Price per ounce (US\$)
1998	294.24	313.15	273.40
1999	278.98	325.50	252.80
2000	279.11	312.70	264.10
2001	271.04	293.25	255.95
2002	309.73	349.30	277.75
2003	363.38	416.25	319.90
2004	409.72	454.20	375.00
2005	444.74	536.50	411.10
2006	603.46	725.00	524.75
2007	695.39	841.10	608.40
2008 (to April 30)	920.87	1,011.25	846.75

Environmental and Regulatory Risk Factors

We may be unable to obtain necessary permits for the I-M Project. Emgold, through its subsidiary, Idaho-Maryland Mining Corporation (IMMC), has submitted its initial application to acquire a Conditional Mine Use Permit (CMUP) to construct a decline and surface facility to continue with the underground exploration of the Idaho-Maryland mine site. The Company expects the CMUP to be received in late 2008 or early 2009. The Company has a very proactive and successful community outreach program to inform local residents and decision makers and stakeholders about the I-M Project and its benefits to the region. Additional environmental investigations are required as a part of the permitting process and for the future development of the surface properties for the purposes of mining and milling of ore. Currently the Company believes that the expected date and time frame for obtaining the permits is reasonable providing the Company is able to maintain adequate funding through the permitting process. Obtaining or reviewing governmental permits is a complex and time consuming process. The duration and success of efforts to obtain and renew permits are contingent upon variables not within the Company's control. Delays or failure to obtain the CMUP, or the expiry, revocation or failure by us to comply with the terms of any such permits we have obtained would adversely affect our business.

Compliance with environmental regulations could affect future profitability and timeliness of operations. The current and anticipated future operations of the Company, including development activities and commencement of production on its properties, require permits from various federal, territorial and local governmental authorities. Companies engaged in the development and operation of mines and related facilities generally experience increased

costs, and delays in production and other schedules as a result of the need to comply with applicable laws, regulations and permits as well as the affects of inflation and the availability of mining specific goods and services.

The Company's exploration activities and its potential mining and processing operations are subject to various laws governing land use, the protection of the environment, prospecting, development, production, commodity prices, exports, taxes, labour standards, occupational safety and health, waste disposal, toxic substances, mine safety and other matters. Emgold believes it is in substantial compliance with all material laws and regulations which currently apply to its activities. There is no assurance that the Company will be able to obtain all permits required for exploration, development and construction of mining facilities and conduct of mining operations on reasonable terms or that new legislation or modifications to existing legislation, would not have an adverse effect on any exploration or mining project which the Company might undertake.

The Company seeks to reopen the historical I-M Project, in accordance with all applicable federal, state, and local laws and regulations, for the purposes of:

.

Exploring and developing the gold resources therein,

.

Processing the associated siliceous waste rock from the mine to produce stone and ceramic building materials via a proprietary process,

.

Producing aggregate materials for mine development as well as commercial sale, and

Operating and maintaining these facilities for the life of the project, to be determined upon completion of a positive feasibility study.

Readers are cautioned that the CMUP is required in order to dewater the existing mine workings at the I-M Project and to construct a decline to conduct underground exploration and complete feasibility work. A production decision must be made before the mine can go into production. The Company intends to mine and recover gold bearing ore as it is conducting its exploration program before a full gold production decision is made.

The Company has conducted geotechnical studies, pilot and demonstration work using the Ceramext® technology to complete a feasibility study to determine the economic viability of producing high quality stone and ceramic building materials from mine development rock and tailings from the I-M Project or other similar operations. The work is designed for a 2,400 Short Tons per Day (STPD) plant for gold recovery and a 1,200 STPD manufacturing plant for ceramics and could have a direct impact on the ability of the Company to obtain the CMUP.

The current plan for the I-M Project will entail the staged exploration and development of up to a 2,400 STPD underground gold mine, mill, as well as a 1,200 STPD manufacturing plant for stone and ceramic tiles and other potential building materials. It is planned to use development rock initially as site construction fill and to sell any excess development rock as aggregate into local and regional construction markets. If and when the Ceramext® process is sufficiently advanced and Golden Bear is funded, a stone and ceramics manufacturing plant will be designed and constructed to process development rock and gold mine tailings to produce high quality stone and ceramic building materials.

The General Plan, Rezone/Pre-zone, Annexation/Local Agency Formation Commission (LAFCo) and Surface Mining and Reclamation Act (SMARA) applications were submitted with the Formal Applications for the CMUP. Once the applications were accepted as complete, the City of Grass Valley (the City) initiated the preparation of a MEA as a precursor to a California Environmental Quality Act (CEQA) review of the project applications as proposed. CEQA topics that may be issues (as described below) are addressed in appendices to the Formal Applications. Some of the issues addressed in the CEQA review are associated with the temporary and permanent growth in employment and population and demands on the social service and utility infrastructures which are being addressed in environmental evaluations for the I-M Project. In addition, because of the location of the mine in a riparian corridor and tributary to the Sacramento River, natural resources are being addressed in an environmental evaluation. The Company and its consultants believe that the environmental aspects of the I-M Project of greatest interest to the City and County of Nevada (County) may include:

Land Use Issues - General Plan Amendments, Zoning Amendments, LAFCo for annexation of county land into the City, including reclamation planning;

Potential Impact on Traffic and Circulation in and around the I-M Project location (e.g., traffic flow, road design and capacity);

Potential Impact on Socioeconomic Characteristics (e.g., housing, schools, water, sewerage and storm water system capacity, emergency services);

Potential Impact on Biological and Cultural Resources (e.g., potential for impacts to special status species and wetlands);

Potential Impact on Water Quality (e.g. potential for impacts to Wolf creek and the South Fork of Wolf Creek where mine water will be discharged after going through water treatment facilities); and

Potential Impact on Wells in the Vicinity of the Mine (potential impact to local wells in the vicinity of the mine that may be affected by dewatering of the mine workings).

The I-M Project could have growth inducing impacts that may not have been addressed fully in the planning documents or formal applications. The Company will need to further address those impacts associated with growth due to industrial development proximate to an urban center. The Company believes that it has defined and disclosed the extent of and can mitigate the potential impacts in all of these areas in ways satisfactory to all of its stakeholders. Where required and agreed, local jurisdictions may receive direct compensation for the cost of improving roadway intersections and expanding services to accommodate potential increased demands on social services and local infrastructure.

Other requirements of CEQA addressed in the context of the Formal application include:

Air Quality - Potential dust generation, non-point sources (machinery/ vehicles);

Geology - Potential for subsidence;

Hazardous Materials - use of and potential exposure to hazardous substances/materials,

Visual and Aesthetics - Construction of mine operations area (ore, transfer facilities), development of stockpiles, office buildings for employees;

Public Health - Use of explosives, effects of subsidence (if any), use of and potential exposure to hazardous substances/materials.

The I-M Project contains areas that have been impacted by historic mining activities and clean up of historic tailings will be required. The Company has completed test work to characterize the historic tailings and will be entering into agreements with the California Department of Toxic Substance Control who will be the Lead Agency overseeing the cleanup of historic tailings on site. The Company is currently working with the California Regional Water Quality Control Board to remediate the location where two historic fuel tanks were removed by the previous owners of the land. Costs for clean up and short and long term liabilities for cleanup of the site are being addressed with State and local agencies. Should the economics of site cleanup of historic mine tailings on site become prohibitive, the Company could elect not to complete the purchase of this property (currently under a lease option to purchase agreement) and discontinue the project. However, information available at this time indicates that clean up of the site can be completed in a reasonable and economic fashion, and this clean up will be a benefit to the local community in the long term.

Specific to U.S. properties, costs involved in complying with various government environmental regulations vary by operation and regulatory jurisdiction. Typically, surface sampling does not require any permits. Agency review and approval for exploration drilling and access construction can vary from several hundred dollars to several thousands of dollars, depending upon the level of activity. Permitting and environmental compliance costs vary, depending upon the level of activities proposed and the sensitivity of the areas where mineral activities are proposed. As a general rule, these costs make up 12% or less of the total cost of an exploration or development program.

In addition, certain types of operations related to the opening and operation of the mine will require the submission and approval of environmental impact assessments. Environmental assessments of proposed projects carry a heightened degree of responsibility for companies and directors, officers and employees. The cost of compliance with changes in governmental regulations has a potential to reduce or eliminate the profitability of operations. For

example, if the Company is unable to obtain required permits, and the reasons that the permits cannot be obtained are deemed to be financially insurmountable, the development of the I-M Project would be curtailed, and operations in Grass Valley, California would cease.

On the Federal, State or Provincial or County level, regulations deal with environmental quality and impacts upon air, water, soils, vegetation and wildlife, as well as historical and cultural resources. Approval must be received from the applicable departments before exploration can begin, and will also involve ongoing monitoring of operations. For the I-M Project, the City acts as the Lead Agency and is responsible for representing other regulatory agencies during the permitting process. If operations result in negative effects upon the environment, government agencies will usually require the Company to carry out remedial actions to correct the negative effects.

Information about the I-M Project is distributed at community events. Issues of concern to the community are addressed and communicated to all interested parties at public workshops and meetings, community events as well as through local news media, direct mail-outs, circulars and brochures. A website, devoted to the I-M Project, www.idaho-maryland.com, provides general I-M Project information, permitting documentation and addresses community concerns regarding the expected impact of dewatering existing mine workings, underground development, exploration and the possible operation of a mine on the community and the environment.

In June 2006, IMMC successfully completed Phase 1 of the three-phase process to permit the reopening of the I-M Project. Phase 1 included the completion of the MEA as part of the CEQA. Based on public input during the MEA process, advances in the Ceramext® technology used to make stone and ceramic tile products from the mine waste, plus advances in computer modelling of the historic Idaho-Maryland Mine geology and assay data, IMMC revised its permit application prior to entering Phase 2 of the permitting process referred to as the Initial Study (IS) and Notice of Preparation (NOP). The major changes included a reduction in ceramic production capacity to reduce traffic impacts. The ceramics building was redesigned in a longer configuration and relocated more centrally to the site to minimize the visual impact of the large building, accommodate other facilities on site, and improve site traffic flow. A connector road between the Idaho-Maryland Road and East Bennett Street has been incorporated into the site plan to address traffic concerns along the Idaho-Maryland Road and East Bennett Street. This is a connector

road that fits into the City's long term plans for traffic connectivity and will benefit the community. The revised Formal Application was submitted to the City in May 2007 and accepted as complete by the City on January 8, 2008. This was followed by Phase 3, the EIR process which is expected to be completed in late 2008 or early 2009.

The Company may be required to post reclamation bonding in California to ensure that areas will be reclaimed after exploration. Reclamation bonds are also required in British Columbia, and have all been posted. The exploration activity in British Columbia to date has been limited to drilling, and as such, the reclamation bonds posted are nominal.

Failure to comply with environmental and reclamation rules could result in penalties. Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment or remedial actions. Parties engaged in mining operations may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violation of applicable laws or regulations. Environmental legislation provides for restrictions and prohibitions on spills, releases or emissions of various substances produced in association with certain mining industry operations, such as seepage from tailings disposal areas, which would result in environmental pollution. A breach of such legislation may result in the imposition of fines and penalties. At present, the Company has estimated that no funds are required for reclamation at the I-M Project, as reclamation related to a drilling program is normally defined in the drilling permit and completed at the end of the program. To date Emgold has been successful in obtaining all permits that it has applied for and believes it has a good working relationship with local regulators. The Company and its employees have been engaged in the exploration and development of mineral properties for many years. Currently, the operations of the Company have been limited to exploration, and no mining activity has yet been undertaken.

Risk Factors Associated with Mining and Exploration

Emgold's exploration and development efforts may be unsuccessful in locating viable mineral resources.

Resource exploration and development is a speculative business, characterized by a number of significant risks, including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but also from finding mineral deposits, which, though present, are insufficient in quantity and quality to return a profit from production.

There is no certainty that the expenditures to be made by the Company on the exploration of its properties and prospects as described herein, in particular, the I-M Project, will result in discoveries of mineralized material in commercial quantities.

Emgold may not be able to market the minerals acquired or discovered by the Company due to factors beyond the control of the Company. The marketability of minerals acquired or discovered by the Company may be affected by

numerous factors which are beyond the control of the Company and which cannot be accurately predicted, such as market fluctuations, the proximity and capacity of milling facilities, mineral markets and processing equipment, and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals and environmental protection, the combination of which factors may result in the Company not receiving an adequate return on investment capital.

Other Risk Factors

Risks associated with the commercialization of the Ceramext® technology

Emgold's management and consultants have identified possible areas of risk concerning the commercialization of the Ceramext® technology. It will be necessary to address the remediation of these risks during the marketing and feasibility phases of the process and product development. Risks that may apply to the commercialization of the technology include developing distribution networks, defining markets, and sales prices for the products. The capital and operating costs for a production plant need to be determined as part of the feasibility process. The Ceramext® process requires relatively uniform waste raw materials and it may be difficult to maintain the uniformity of the feedstock causing difficulty with process control.

The Ceramext® process has been demonstrated on a pilot plant scale basis. Tile products have been manufactured from a wide variety of mineral wastes at elevated temperatures. Stone materials of high strength and very low porosity have been produced. The process production volume has not yet been scaled up; therefore, it has not yet

production ready. In addition, the larger sized process equipment needed for commercial exploitation has not been engineered or demonstrated, and it is presently not available since the process is new. Patents in the U.S. and certain international patents have been applied for but have not yet been approved and there is risk that the some or all of the patents may not be approved. Currently, the Company is reviewing methodologies to finance Golden Bear and commercialization of the Ceramext® process development and operations independently from Emgold.

Emgold's title to mineral property interests may be challenged. Although Emgold has completed a review of titles to its mineral interests and has had two title opinions prepared on the I-M Project, it has not obtained title insurance or any formal legal opinion with respect to all of its properties and there is no guarantee of title. The mineral properties may be subject to prior unregistered agreements or transfers or native land claims, and title may be affected by undetected defects. Emgold's mineral property interests include mineral claims in British Columbia, which have not been surveyed, and therefore, the precise area and location of such claims or rights may be in doubt. As there are unresolved native land claim issues in British Columbia, the Company's properties and prospects in this jurisdiction may be affected in the future.

Currency fluctuations between the United States dollar and the Canadian dollar may affect its financial position and results. Many of Emgold's principal financial obligations are in United States dollars, which make it subject to foreign currency fluctuation and such fluctuations may materially affect its financial position and results. In fiscal 2007, most of the funds of the Company were raised in Canadian dollars and were held primarily in Canadian dollars, and are therefore subject to currency fluctuation against the Canadian dollar. The consolidated financial statements are reported in United States dollars and the functional currency of the Company is in United States dollars.

We may not be able to insure certain risks which could negatively impact our operating results. In the course of exploration, development and production of mineral properties, certain risks, and in particular, unexpected or unusual geological and operating conditions including rock bursts, unusual or unexpected formations, formation pressures, cave-ins, land-slides, fires, explosions, flooding and earthquakes, power outages, labour disruptions, and the inability to obtain suitable or adequate machinery, equipment or labour may occur. It is not always possible to fully insure against such risks and the Company may decide not to take out insurance against such risks as a result of high premiums or other reasons. Should such liabilities arise, they could reduce or eliminate any future profitability and result in increasing costs and a decline in the value of the securities of the Company.

U.S. investors may not be able to enforce their civil liabilities against the Company or its directors, controlling persons and officers. It may be difficult to bring and enforce suits against the Company. The Company is a corporation incorporated in British Columbia under the *Business Corporations Act (British Columbia)* and, consequently, there is a risk that Canadian courts may not enforce judgements of U.S. courts or enforce, in an original action, liabilities predicated upon the U.S. federal securities laws directly. A majority of the Company's directors and officers are residents of Canada and a substantial portion of the Company's assets are located outside of the United States. Consequently, it may be difficult for United States investors to affect service of process upon those directors or officers who are not residents of the United States, or to realize in the United States upon judgements of United States courts predicated upon civil liabilities under United States securities laws. It is unlikely that an original action could be brought successfully in Canada against any of such persons or the Company predicated solely upon such civil liabilities under the U.S. Securities Act.

Emgold's directors and officers serve as directors and officers of other publicly traded junior resource companies.

Some of the directors and officers of Emgold serve as officers and/or directors of other resource exploration companies and are engaged and will continue to be engaged in the search for additional resource opportunities on their own behalf and on behalf of other companies, and situations may arise where these directors and officers will be in direct competition with Emgold. Such potential conflicts, if any, will be dealt with in accordance with the relevant provisions of British Columbia corporate and common law. In order to avoid the possible conflict of interest which may arise between the directors' duties to Emgold and their duties to the other companies on whose boards they serve, the directors and officers of Emgold expect that participation in exploration prospects offered to the directors will be allocated among or between the various companies that they serve on the basis of prudent business judgement and the relative financial abilities and needs of such companies.

Emgold is dependent on its ability to recruit and retain key personnel. Emgold has relied on and may continue to rely upon consultants and others for exploration, development and technical expertise. The Company strongly depends on the business and technical expertise of its management and key personnel. As the Company's

operations expand additional general management and human resources will be required. It may be difficult for Emgold to continue to find and retain the services of qualified personnel.

Risks Relating to an Investment in the Securities of the Company

The Company could be deemed a Passive Foreign Investment Company which could have negative consequences for U.S. investors. Potential investors who are U.S. taxpayers should be aware that Emgold expects to be a passive foreign investment company (PFIC) for the current fiscal year, appears to have been a PFIC in prior years and may also be a PFIC in subsequent years. If Emgold is a PFIC for any year during a U.S. taxpayer s at least certain holding period, then such U.S. taxpayer generally will be required to treat any so-called excess distribution received on its common shares, or any gain realized upon a disposition of common shares, as ordinary income and to pay an interest charge on a portion of such distribution or gain, unless the taxpayer makes a qualified electing fund (QEF) election or a mark-to-market election with respect to the shares of Emgold. In certain circumstances, the sum of the tax and the interest charge may exceed the amount of the excess distribution received, or the amount of proceeds of disposition realized, by the taxpayer. A U.S. taxpayer who makes a QEF election generally must report on a current basis its share of Emgold s net capital gain and ordinary earnings for any year in which Emgold is a PFIC, whether or not Emgold distributes any amounts to its shareholders. A U.S. taxpayer who makes the mark-to-market election generally must include as ordinary income each year the excess of the fair market value of the common shares over the taxpayer s tax basis therein. U.S. taxpayers are advised to seek the counsel of their professional tax advisors.

The liquidity of our shares in the United States markets may be limited or more difficult to effectuate because we are a Penny Stock issuer. Emgold s stock may be subject to U.S. Penny Stock rules which may make the stock more difficult for U.S. shareholders to trade on the open market. The SEC has adopted rules that regulate broker-dealer practices in connection with transactions in penny stocks. Penny stocks are equity securities with a price of less than \$5.00 per share (other than securities registered on certain national securities exchanges or quoted on the NASDAQ system provided that current prices and volume information with respect to transactions in such securities is provided by the exchange or system).

The Penny Stock Rules require a broker-dealer, prior to effecting a transaction in a penny stock not otherwise exempt from such rules, to deliver a standardized risk disclosure document prepared by the SEC that provides information about penny stocks and the nature and level of risks in the penny stock market. In particular, the statement must contain:

(i)

A description of the nature and level of risk in the market for penny stocks in both public offerings and secondary trading;

(ii)

A description of the broker-dealer's duties to the customer and of the rights and remedies available to the customer with respect to a violation to such duties or other requirements of securities laws;

(iii)

A brief, clear, narrative description of a dealer market, including bid and ask prices for penny stocks and the significance of the spread between the bid and ask price;

(iv)

A toll-free telephone number for inquiries on disciplinary actions;

(v)

The definitions of significant terms in the disclosure document or in the conduct of trading in penny stocks; and

(vi)

Such other information and be in such form, including language, type, size and format, as the Commission shall require by rule or regulation.

The broker-dealer must obtain from the customer a written acknowledgement of receipt of the standardized disclosure document.

The broker-dealer must provide the customer with:

(i)

The inside bid and offer quotations for the penny stock, or other bid and offer price information for the penny stock, if inside bid and offer quotations are not available;

(ii)

The compensation of the broker-dealer and its salespersons in the transaction;

(iii)

The number of shares to which such bid and ask prices apply, or other comparable information relating to the depth and liquidity of the market for such stock; and

(iv)

A monthly account statement showing the market value of each penny stock held in the customer's account.

In addition, the Penny Stock Rules require that prior to a transaction in a penny stock not otherwise exempt from such rules the broker-dealer must make a special written determination that the penny stock is a suitable investment for the purchaser and receive the purchaser's written acknowledgment of the receipt of a risk disclosure statement, a written agreement to transactions involving penny stocks, and a signed and dated copy of a written suitability statement. At the present market prices, Emgold's common shares will (and in the foreseeable future are expected to continue to) fall within the definition of a penny stock. Accordingly, United States broker-dealers trading in Emgold's shares will be subject to the Penny Stock Rules. Rather than complying with those rules, some broker-dealers may refuse to attempt to sell penny stock. As a result, shareholders and their broker-dealers in the United States may find it more difficult to sell their shares of Emgold, if a market for the shares should develop in the United States.

Emgold's stock price may limit its ability to raise additional capital by issuing common shares. The low price of Emgold's common stock also limits Emgold's ability to raise additional capital by issuing additional shares. There are several reasons for these effects. First, the internal policies of certain institutional investors prohibit the purchase of low-priced stocks. Second, many brokerage houses do not permit low-priced stocks to be used as collateral for margin accounts or to be purchased on margin. Third, some brokerage house policies and practices tend to discourage individual brokers from dealing in low-priced stocks. Finally, broker's commissions on low-priced stocks usually represent a higher percentage of the stock price than commissions on higher priced stocks. As a result, Emgold's shareholders pay transaction costs that are a higher percentage of their total share value than if Emgold's share price were substantially higher.

The market for the Company's stock has been subject to volume and price volatility which could negatively affect a shareholder's ability to buy or sell the Company's shares. The market for the common shares of the Company may be highly volatile for reasons both related to the performance of the Company or events pertaining to the industry as well as factors unrelated to the Company or its industry. In particular, market demand for products incorporating minerals in their manufacture fluctuates from one business cycle to the next, resulting in change of demand for the mineral and an attendant change in the price for the mineral. The Company's common shares can be expected to be subject to volatility in both price and volume arising from market expectations, announcements and press releases regarding the Company's business, and changes in estimates and evaluations by securities analysts or other events or factors. In recent years the securities markets in the United States and Canada have experienced a high level of price and volume volatility, and the market price of securities of many companies, particularly small-capitalization companies such as the Company has experienced wide fluctuations that have not necessarily been related to the operations, performances underlying asset values, or prospects of such companies. For these reasons, the Company's common shares can also be expected to be subject to volatility resulting from purely market forces over which the Company will have no control. Further, despite the existence of a market for trading the Company's common shares in Canada, stockholders of the Company may be unable to sell significant quantities of common shares in the public trading markets without a significant reduction in the price of the stock. Emgold's shares have ranged between approximately Cdn\$0.11 and Cdn\$0.99 in the last three calendar years.

Significant potential equity dilution and end of lock-ups. A summary of Emgold's diluted share capital is as follows: Emgold has stock options outstanding (13,623,000, at April 30, 2008), of which 9,468,000 are exercisable at prices ranging from Cdn\$0.10 to Cdn\$0.36 per share which will likely act as an upside damper on the trading range of Emgold's shares. The remaining 4,155,000 options are exercisable at prices of Cdn\$0.90 to Cdn\$1.00 per share, which is well outside the trading range of Emgold from January 1, 2008, to April 30, 2008, of Cdn\$0.14 to Cdn\$0.27 per share. As a consequence of the passage of time since the date of their original sale and issuance, there are no shares of Emgold remaining subject to hold period restrictions in Canada or the United States as of April 30, 2008. At April 30,

2008, there were 100,813,665 warrants exercisable at prices from \$0.11 to Cdn\$1.00. During the year ended December 31, 2007, additional warrants exercisable at prices ranging from Cdn\$0.11 to Cdn\$0.15 were issued pursuant to financings completed during the year. The resale of outstanding shares from the exercise of dilutive securities would have a depressing effect on the market for Emgold's shares. Dilutive securities based on the trading range of Emgold's common shares at April 30, 2008, including 82,073,842 warrants and underlying warrants, and the 9,468,000 shares above, represent approximately 58.3% of Emgold's issued shares.

ITEM 4.

INFORMATION ON THE COMPANY

A.

History and Development of the Company

The legal and commercial name of the Company, which is the subject of this Form 20-F, is Emgold Mining Corporation .

The Company s executive office is located at:

Suite 1400 570 Granville Street, Vancouver, British Columbia V6C 3P1

Telephone: (604) 687-4622

Facsimile: (604) 687-4212

E-Mail: info@emgold.com

Website: www.emgold.com

The contact persons in Vancouver are Sargent H. Berner, Co-Chief Executive Officer and Jeffrey Stuart, Manager, Investor Relations.

The Company does not have an agent in the United States, and accordingly, the mailing address of the Company is the Company s executive office at the address noted above.

The Company s fiscal year end is December 31.

The Company s common shares are listed on the TSX Venture Exchange under the symbol EMR . They also trade on the OTC Pink Sheets under the symbol EGMCF in the United States, and since January 2006 have traded on the Frankfurt market under the symbol EML .

Emgold Mining Corporation (Emgold or the Company) was originally incorporated under the Company Act (British Columbia) as 361869 BC Ltd. on March 17, 1989. The Company s name was changed to HLX Resources Ltd. (HLX) on July 19, 1989. On August 31, 1989, HLX was amalgamated with four mineral exploration companies - Eastern Mines Ltd. (incorporated March 10, 1980), Gallant Gold Mines Ltd. (incorporated January 18, 1979), Silver Sceptre Mines Ltd. (incorporated March 10, 1980) and Standard Gold Mines Ltd. (incorporated February 6, 1980). Eastern Mines Ltd., Silver Sceptre Mines Ltd. and Standard Gold Mines Ltd. originally had exploration properties in the Terrace Bay area of Ontario. Gallant Gold Mines Ltd. originally had exploration properties in the Rossland-Trail area of British Columbia. After the amalgamation, the resulting company continued to be named HLX Resources Ltd.

On March 30, 1992, HLX changed its name to Emperor Gold Corporation at which time a special resolution of the shareholders was passed to consolidate the common shares on a five old for one new common share basis and to increase the authorized share capital from 10,000,000 common shares without par value and 50,000,000 first preference shares without par value, to 50,000,000 common shares without par value and 50,000,000 first preference shares without par value. The Company s memorandum and articles were amended to reflect this change. On August 12, 1997, the Company s memorandum and articles were again amended as the Company changed its name to Emgold Mining Corporation. The name was changed due to the fact that there was an unrelated mining company with a very similar name to the Company, with offices in Vancouver, British Columbia.

In fiscal 2002, the Company s share capital was increased from 100,000,000 to 550,000,000 shares without par value, divided into 500,000,000 Common Shares without par value and 50,000,000 First Preference Shares without par value, each share having attached thereto the special rights and restrictions set out in the Articles of the Company. The Company was continued under the Business Corporations Act in British Columbia in June 2005, and the authorized share capital of the Company was changed to an unlimited number of common shares without par value and an unlimited number of first preference shares.

The Company is in the business of acquiring, exploring, and developing mineral properties. For the past three completed financial years, and since 1993, the Company has been principally engaged in permitting and developing of the I-M Project located near the City of Grass Valley (the City) in Nevada County, California, U.S.A. The Company originally acquired the rights to the I-M Project in August 1993. Over the next five years, significant expenditures were made on the I-M Project. An Environmental Impact Report was successfully completed to dewater and explore the Idaho-Maryland Mine and a National Pollution Discharge Elimination System Permit obtained. However, in the late 1990 s, with a decreasing gold price, it became impossible to raise capital to continue

with the exploration the I-M Project. Gold prices continued to drop and the Company wrote-down the property for a nominal carrying value of \$1 in 1999. The lease option to purchase agreement on the I-M property and mineral rights was eventually dropped. Permits to dewater the mine were cancelled or expired.

Emgold remained interested in the I-M Project and continued to pursue various financing alternatives. In fiscal 2002, the Company renegotiated the terms and conditions of a lease option to purchase agreement with the owners of the I-M property and mineral rights. Details of expenditures relating to the I-M Property and mineral rights are included in Item 4 under Property, Plant and Equipment and Idaho-Maryland Project History of the Property. Emgold created a 100 percent owned subsidiary company, the Idaho-Maryland Mining Corporation (a Nevada Corporation), to hold and develop the I-M Project. Activities and expenditures related to the I-M Project are completed through this subsidiary.

In 2003, Emgold acquired rights to the Ceramext® technology and changed the name of a second 100 percent owned subsidiary company called Holly Corporation into Golden Bear Ceramics Company. Emgold recognized the potential application of the Ceramext® technology for the I-M Project (to eliminate the requirement for surface tailings and waste rock disposal) and as a business opportunity for processing a wide range of mineral waste materials to produce high quality stone and ceramic building materials on a global basis. Emgold initiated work to commercialize the technology and to set up a research and development facility in Grass Valley, CA.

In 2005, Emgold commenced permitting of the I-M Project with acceptance of its Permit Applications by the City of Grass Valley. The I-M Project is being permitted according to the California Environmental Quality Act (CEQA), the California Surface Mining and Reclamation Act (SMARA), and other applicable federal, state, and local legislation. The City has been designated to be the Lead Agency in the permitting process. The City commenced work to complete the permitting process for the Project, which was divided into three phases. Phase 1 is the Master Environmental Assessment. Phase 2 is the Initial Study. Phase 3 is the Environmental Impact Report. The City will then need to approve a Conditional Use Permit for the Project. Currently, permitting is in Phase 3 and it is expected that the Environmental Impact Report will be certified in late 2008 and the Conditional Use Permit will be approved late 2008 or early 2009.

Part of the I-M Project as presently planned includes a stone and ceramics manufacturing facility which would be constructed by Golden Bear Ceramics Company. Since 2004, Golden Bear has been completing research and development of the Ceramext® process and in 2006 completed construction and operation of a pilot plant facility and an initial demonstration tile installation at a residence/office complex in Auburn, CA. With successful completion of this step in the technology development, Emgold commenced activities in 2007 to finance Golden Bear independently of Emgold, to allow it to advance opportunities for growth on a global basis beyond the I-M Project.

Emgold also has three additional mineral properties, either under option or fully vested: the Rozan (fully vested), the Stewart property, and the contiguous Jazz property. All are located in the Nelson mining district north of Ymir in south-eastern British Columbia. Details of property payments and expenditures with respect to these properties are outlined in Part 4 of this report under Exploration Projects, British Columbia Properties . The Company conducted an exploration program in the summer and fall of fiscal 2007 using the proceeds of a flow-through financing of common shares (Cdn\$850,440). Trenching and drilling work was completed on the Jazz and Stewart Properties and one drill

hole was completed on the Rozan property. The results from the drilling and trenching are being reviewed in relation to historic exploration activity. An update summary report on the properties is currently in process.

B.

Business Overview

General

Emgold has historically been a mineral exploration company. The Company is focussed on the permitting and development of the historic Idaho-Maryland Mine, located in Grass Valley, CA. The Idaho-Maryland Mine was the second largest underground gold mine in California, producing 2.4 million ounces of gold between 1862 and 1956. The I-M project is adjacent to the historic Empire Mine, which was the first mine operated by Newmont Mining Corporation. The Empire Mine produced 5.8 million ounces of gold from 1850 to 1956, and was the largest gold mine in California. The Grass Valley District produced over 17 million ounces of gold. Emgold believes the I-M property to be one of the largest underground gold exploration targets in North America with potential to become a significant high grade producing mine. Plans are to construct a 2,400 ton per day underground gold mine and gold processing facility, and establish Emgold as a mid-tier producing company.

Emgold also has a portfolio of early-stage mineral exploration projects in British Columbia that contain tungsten, molybdenum, silver, gold, and other mineralization. These properties have been drilled by a number of companies over the years, with further work being completed by Emgold since their acquisition. Emgold believes these properties have exploration potential, and continues exploration of the properties as funding allows. Emgold is also considering joint venture or sale of these properties as it focuses its capital and resources on the I-M Project.

Emgold also has also acquired the rights to develop and commercialize the Ceramext® Process to convert mineral wastes and other siliceous materials to stone and ceramic building products. Emgold originally acquired this technology as a method to process development rock and mine tailings from the I-M Project and to eliminate the need for surface tailings impoundments and waste dumps associated with a traditional gold mine. Emgold has successfully developed the technology to a pilot plant stage, and recognizes its potential to treat mineral wastes on a global basis as well as to revolutionize both the floor tile and roof tile industries by its ability to create 100 percent recycled green building products. Emgold is currently seeking funding to finance Golden Bear Ceramics Company, to allow it to expand independently of the I-M Project. Emgold plans to retain the rights to use the Ceramext® process for the I-M Project.

Idaho-Maryland Mining Corporation

The Company is seeking to reopen the historical Idaho-Maryland Mine (also referred to as I-M Project, or the Idaho-Maryland, in this Annual Report), in accordance with all applicable federal, state, and local laws and regulations. Readers are cautioned that a Conditional Mine Use Permit (CMUP) is required in order to remove water

from the existing mine workings at the I-M Project and to conduct underground exploration and complete a feasibility study. The Company formally applied to the City of Grass Valley (City) for the CMUP on February 9, 2005, and the application was received as substantially complete on May 24, 2005. Following this, the City completed the MEA in June 2006. The next phase was the Notice of Preparation and Initial Study (NOP and IS) with the final phase being the Environmental Impact Report (EIR). The Company filed a revised CMUP application in May 2007. The City completed the IS on January 8, 2008. The I-M Project has now entered its final stage of the permitting process and is requiring a substantial amount of the Company's financial and management resources. The Company has budgeted approximately \$3.5 million for internal and external costs for completion of the CMUP process.

IMMC has a mining lease with an option to purchase from the owners of the property for 37 acres of surface rights at the New Brunswick shaft site, 56 acres at the Idaho-Maryland tailings area, and approximately 2,750 acres of mineral rights. IMMC also owns 45 acres of the former sawmill site adjacent to the Idaho-Maryland tailings area. IMMC has an easement of about one acre around the Round Hole Shaft between the Idaho-Maryland tailings area and the New Brunswick shaft site to be used for future mine ventilation and emergency access. IMMC also owns the subsurface mineral rights of 70% of the Dana-Christopher Columbus patented mining claims and 100% of the Golden Gate West and Golden Gate East subsurface patented mining claims, totalling about 30 acres. These properties are contiguous and are part of the current I-M Project and consist of only subsurface mineral rights. The sawmill site was purchased so that along with the original Idaho-Maryland Mine tailings site there were sufficient surface rights to construct a portal for underground access, gold milling and ceramic manufacturing facilities, maintenance facilities, ceramic storage areas, an education center and an administrative site. The New Brunswick site will be primarily used for dewatering the mine.

The existing mine workings are currently flooded with approximately 2,500 acre-feet of ground water, or approximately 500 million gallons of water. In order to conduct underground exploration, the mine workings must be pumped out or dewatered. The Company anticipates pumping water to surface up to a maximum rate of 12 acre-feet per day for approximately 9 to 12 months to complete the dewatering, if the pumping is conducted 24 hours a day and depending on the local precipitation and the water flow in the receiving waterway. The water will be treated and pumped into an adjoining creek. The timeframe will lengthen accordingly if pumping is not constant over the 24-hour period.

The Company may consider mining and toll milling of gold ore should sufficient gold bearing ore be mined during the initial stages of underground exploration and development. A positive feasibility study may need to be completed and a production decision must be made before the mine can go into production. The outcome of this feasibility work and receipt of the CMUP will have a direct impact on the ability of the Company to put the I-M Project into production.

The long-term development plan for the I-M Project includes underground exploration to define further resources possibly leading to staged construction and operation of up to a 2,400 Short Tons Per Day (STPD) underground gold mine and mill, as well as a 1,200 STPD manufacturing plant for ceramic, tiles and other potential building materials. The ceramics plant would be designed to process development rock and gold mine tailings as feedstock to produce high-quality ceramic building materials, to reduce the effective cost of gold production and to mitigate the environmental impact of the proposed mining operations.

Golden Bear Ceramics Company

Emgold through its wholly owned subsidiary Golden Bear Ceramics Company has the worldwide rights to the Ceramext® technology because of its potential to provide a tailings management strategy for the I-M Project while contributing a significant revenue stream to the mine. The Company believes there is also a global business opportunity to process a wide range of siliceous waste and naturally occurring materials and to produce high quality stone and ceramic building materials. The Ceramext® process has been demonstrated on a laboratory and pilot plant basis. It has been possible to perform simple extrusion and forming operations on a wide variety of silicate materials at elevated temperatures. Stone materials of high quality, strength, and very low porosity have been produced. The process production volume has not yet been scaled up and therefore, it is not yet been commercialized.

It is anticipated that the Ceramext® technology will take less than 2 years to commercialize once adequate funding is in place to move forward with construction of a demonstration plant. During the demonstration period, a feasibility study will be undertaken to construct the first commercial plant. Should the feasibility study prove positive, a commercial stone and ceramics production facility could be constructed at the I-M Project site. It is expected that the stone and ceramics plant would be added to the mining site about 24 months after receipt of the CMUP and completion of the feasibility study. Construction of the commercial plant would be subject to adequate financing being independently raised for the ceramics and stone processing facility by Golden Bear.

In addition, the Company may receive payments from development partners against the costs of manufacturing samples projected from the demonstration-scale facility in the research and product development phase. Scale of production has been limited by the size of equipment in the current research and development facility. Capital investment related to expanding and modifying the pilot scale facility is currently being sourced. Progress has been delayed due to the difficulty in raising capital for two different types of capital intensive projects in one entity.

Additional marketing studies, a feasibility study and basic engineering will be completed when the required financing can be secured independently of the mining company, it is anticipated that these studies could be completed within 12 to 14 months.

C.

Organizational Structure

The Company has three direct and indirect wholly owned subsidiaries, Idaho-Maryland Mining Corporation (formerly Emperor Gold (U.S.) Corp.), Golden Bear Ceramics Company (formerly Holly Corporation (U.S.)) (Golden Bear) and Emgold (U.S.) Corporation (Emgold US), all incorporated in the State of Nevada. Unless the context otherwise requires, references herein to the Company or Emgold include the subsidiaries of the Company. Emgold U.S. holds both the Golden Bear and Idaho-Maryland subsidiaries.

D.

Property, Plant and Equipment

The Company has active mineral exploration interests in four properties: the I-M Project (California), the contiguous Stewart (British Columbia) and Jazz (British Columbia) properties and the Rozan (British Columbia) property. The Company's principal property is the I-M Project, which is comprised of three separate areas: the Idaho-Maryland, New Brunswick and Round Hole sites.

In 2004, the Company entered into a joint venture with a private, non-related company to acquire approximately 45 acres adjacent to other properties under option by the Company in Grass Valley, California. The Company's share of the purchase price was \$542,500 plus legal costs. The property was initially acquired to complement the I-M Project, as the combined 102.5-acre site would be suitable for mining milling and ceramic manufacturing facilities. The Company and its arm's-length partner have since terminated the joint venture, and the Company's portion of the title has been transferred to the Company's name. The land is expected to be used for buildings that may be needed for construction of mining operations including storage areas, access for vehicular traffic and to provide buffer zones to isolate the mine from adjacent properties. Development of the site is subject to review and approval of the City.

In 2004, the Company entered into a three-year lease and option to purchase agreement for a 44,750 square foot building located in Grass Valley, California. The warehouse style building is of sufficient size to store the core and maps relating to the I-M Project and for a research and development facility for Golden Bear. The building is large enough to house, build and test a demonstration-sized plant utilizing the Ceramext® process. There is good access to the building for delivering and storing materials. It has the electrical power, natural gas and other building services to conduct all testing required. Subsidiary company administration, geological and research personnel are all housed in the building for both the IMMC and Golden Bear.

None of the Company's projects have known reserves, and all proposed programs are exploratory in nature. The Idaho-Maryland Project has NI 43-101 compliant mineral resources in Measured, Indicated, and Inferred categories.

Idaho-Maryland Project

Surface and Mineral Rights

The I-M Project is located 1.5 miles (2.6 km) east of downtown Grass Valley, Nevada County, within the State of California. The property comprises approximately 2,800 acres (1,133 ha) of mineral lands, with 37 acres (14.9 ha) of surface rights centered around three of the original shafts at the properties comprising the I-M Project, the New Brunswick shaft, which has 56 acres (22.6 ha) of surface rights west of the Idaho shaft, ownership of 45 acres (18 hectares) adjacent to the 56 acres, and a 1-acre easement around the Round Hole shaft. The mineral rights are severed from the surface rights at a variable depth from surface, with all mineral rights being contiguous below 200 ft (60 m) from surface. The parcels and sub-parcels have been legally surveyed a number of times since the early 1900s. Emgold intends to continue to update the survey work over the next few years. Most of the property is located in the

City of Grass Valley, but the New Brunswick property is located in Nevada County adjacent to the City.

History of the Property

The Grass Valley mining district is one of the most productive and famous mining districts in the State of California. The mines in the district were known as the Northern Mines and were not part of the Mother Lode gold belt. The first and second largest underground gold producing mines in the state, the Empire and Idaho-Maryland, are located adjacent to one another within the district. Placer gold was first found in Wolf Creek, adjacent to the Idaho-Maryland mine, in 1848. Gold-bearing quartz was discovered at Gold Hill in 1850. The original claim on the Idaho-Maryland mine was staked in 1851 and high-grade gold mineralization was discovered in 1861, with the commencement of mining in 1863. It has been estimated that over the approximately 106 years of gold mining activity in the Grass Valley district from 1850 to 1956, a total of 17 million ounces (529 million g) of gold were produced. The district is still considered the fifth largest gold-producing area in the United States, although most of the mines have not been in production since 1956. The Idaho-Maryland mine yielded an estimated 2,383,000 ounces of gold from 5,546,000 short tons for a recovered grade of 0.43 ounces of gold per short ton. The Idaho-Maryland area was mined only to the 3,280-foot (1,000 m) level while its neighbour, the Empire Mine, was systematically mined to the 5,000-foot (1,523 m) level.

The claims around the deposit were consolidated in 1915 to form the Idaho-Maryland mine. Metals Exploration Company of New York acquired control of the property, dewatered the mine, deepened the Idaho shaft to 2,000 ft (610 m) and moved the Union Hill stamp mill to the Idaho shaft area. Full production, however, was never achieved in the 1920 s. Control over the property changed in 1926 when Errol MacBoyle and Edwin Oliver created holdings that included the Idaho-Maryland, Brunswick, and Morehouse mines. Production commenced the same year. From 1926 to 1942 the Idaho Mine produced 650,000 ounces of gold from 1.1 million tons of ore. The Brunswick Mine restarted production in 1934 after deepening its shaft to 3,460 ft and constructing a 750 t/d mill. The mines were

closed in 1942, due to the enactment of the Federal War Production Boards Limitation Order L-208, and were reopened again in 1945. Production was hampered by depleted operating funds, rising costs, skilled labour shortages, and negligible exploration and underground development work. Gold mining ceased at the Idaho-Maryland mine in 1954, being briefly replaced by government-subsidized tungsten production until 1957. Mining activity stopped altogether in 1957. At the time of closure, Idaho-Maryland Industries, Inc. owned the mine. In 1963 Idaho-Maryland Industries, Inc. executed a Quit Claim Deed to William and Marian Ghidotti. Ownership of the mineral rights eventually passed to Mary Bouma, Erica Erickson, and William Toms (referred to as the BET Group) in 1983.

In August 1993, Emgold originally leased, with an option to purchase, the initial four land parcels in Grass Valley, California from the BET Group, the unrelated owners of the properties. Until 1999, the Company held interests in four land parcels in Grass Valley, California (collectively referred to herein as the I-M Project) through its

subsidiary, IMMC. The four parcels were comprised of the subsurface (generally below 200 feet (61 m) mineral rights to 2,745 acres (1,111 ha) of land and the surface rights to three parcels, one of 37 acres (15 ha) surrounding the 3,281 foot (1,000 m) deep New Brunswick shaft, one of 80 acres (32.4 ha) adjacent to and south of the New Brunswick shaft (the Brunswick Millsite) and one of 13 acres (5.3 ha) surrounding the Round Hole Shaft.

The Company held a 100% interest in the Round Hole Shaft until December 2000. It also held a lease and option to purchase a 100% interest in the other three land parcels, which expired. These land parcels were held as security for a convertible debenture held by Frank A. Lang and a convertible debenture held by Lang Mining Corporation, a private company controlled by Frank A. Lang. As the Company and the debenture holders could not come to mutually acceptable terms for an extension to the convertible debentures, which expired on June 8, 2000, the convertible debentures were cancelled and the land held as security was transferred to a private company controlled by Frank A. Lang.

Emgold had incurred significant expenditures on the property prior to 1999. Under Canadian generally accepted accounting principles and the policy of the Company, the status of the property was reviewed and the Company recorded a write-down in its interest in the I-M Project of \$6,982,016 to a nominal carrying value of \$1. Gold prices were low, and it was difficult to raise capital for exploration of mineral properties. Subsequent to that date, all costs related to the maintenance of the I-M Project have been expensed, as the Company was unable to finance continued development of the property.

In 2002, the lease terms on the subsurface mineral rights to the 2,745 acres of land and the 37 acres surrounding the New Brunswick shaft were renegotiated with the BET Group. The term of the amended lease was for a period of five years, commencing on June 1, 2002, and ending on May 31, 2007. The BET Group granted to the Company the exclusive right and option to purchase all of the leased property. Payments of \$25,500 were due quarterly. Provided that payments remain current, the Company may purchase the property at any time. The purchase price for 2002 was \$4,350,000 and is increased by 3% each lease year (\$5,042,880 at December 31, 2007). In February 2007, the Company negotiated an extension to the lease whereby the term of the exercise date was extended from May 31, 2007, to December 31, 2008. The Company agreed to a revised quarterly option payment of \$75,000 beginning on May 1, 2007, continuing for the term of the revised lease. An additional one-time extension payment of \$75,000 was made upon execution of the revised agreement, in addition to the final option payment of \$25,500 under the lease, before the final amendment. All other terms of the original agreement remained the same, including the 3% net smelter royalty (NSR) that would be payable on production, if the Company did not purchase the property, but continued to lease it. All royalty payments may be applied as a credit on the purchase price, but option payments may not be so applied.

In 2002 Emgold changed its accounting policy with respect to exploration and development expenditures, whereby such costs are expensed until a pre-feasibility or feasibility study has been completed that indicates a property is economically feasible. Acquisition costs relating to option payments, land payments and share issuances are capitalized, until the mineral property is determined to be uneconomic or is advanced by disposition, or further development. During the year ended December 31, 2007, \$2,349,453 (2006 - \$1,792,149) was expended by the Company on exploration and permitting activities on the I-M Project.

Accessibility, Climate, Local Resources, Infrastructure and Physiography

The I-M Project is located in western Nevada County, east of downtown Grass Valley and south of Nevada City. The property is within the area of influence of Grass Valley. Both Grass Valley and Nevada City are Sierra Nevada foothill communities located approximately 20 miles (32 km) north of Auburn and approximately 55 miles (89 km) northeast of Sacramento. Highway 49 and Highway 20 connect the Grass Valley/Nevada City area regionally. The 56-acre (23 ha) BET property and adjacent 45-acre (18 hectare) site are located approximately 1.5 miles (2.6 km) east of downtown Grass Valley and 3.5 miles (5.9 km) south of Nevada City. The Brunswick property lies adjacent to a two-lane artery running 400 ft (120 m) to the north of the New Brunswick shaft.

Geological Setting

The I-M Project and the Grass Valley Mining District are situated in the northern portion of the Sierra Nevada Foothills Gold Belt, a geographic area containing many historic gold mines. This belt averages 50 miles in width and extends for 320 miles in a north-northwest orientation along the western slope of the Sierra Nevada range. The location of the Sierra Nevada Foothills Gold Belt coincides closely with a zone of metamorphic rocks and regional faults known as the outcrop area of the Sierra Nevada Foothills Metamorphic Belt.

Exploration

Historic Drilling

Until the mine closed in the 1950 s exploratory and delineation diamond drilling regularly took place. Historically, eleven hundred holes totalling 230,000 ft (70,000 m) were diamond drilled. Hole traces have been input into the geological database, as have the historical assay, stope, and geology various plans and drawings. No historical drill logs have been found in the historical information.

Down hole surveys were not conducted in early drilling, and deviation of the drill holes was common. Recorded in the geology monthly reports were experiences such as driving an underground heading on a drill hole only to find that the hole soon curved significantly from the planned orientation. The deviation was not consistent, and so could not be predicted. This observation was one of the main reasons a technical report prepared for the Company by AMEC Americas Limited (AMEC) recommended that mineral resources defined by drilling alone should be classified as inferred mineral resources. No core was preserved from past mining operations at the Idaho-Maryland Mine.

Sampling and Analysis

The I-M Project contains a historic database with over 100,000 assays. The historic assays, which are almost exclusively for gold, were done on samples taken from underground workings (walls and backs from drifts and crosscuts, walls from raises). Sample quality can be inferred by the reconciliation of historic production records to underground sample data. These studies, as well as a recent investigation on mill-to-resource prediction, show that the resource or reserve estimates consistently underestimated the amount of gold produced by milling, a discrepancy most likely reflective of sample size influence rather than laboratory technique. Gold deposits with coarse gold areas are best sampled with large sample sizes, which was not common practice when the mine was in production. Therefore, any estimates made using this historic data should include comparisons with values unadjusted and adjusted for the regular underreporting of grade (i.e., call factor). It is believed that the comprehensive set of assay plans, supported by records of muck car stope samples and mapped geology data, as well as the detailed historical production records, all support the integrity of the assay data for the Idaho-Maryland Mine. These data are deemed suitable for use in mineral resource estimation, and have been utilized in the reports prepared for the Company by AMEC.

Gold Exploration

The gold exploration program has consisted of an extensive geologic evaluation of the historical mine records plus additional diamond drilling from surface. This rather unique program was possible because of the excellent and comprehensive preservation of the historical Idaho-Maryland mine and mill records. This data is exhaustive and essentially complete, although without any historical drill data, and has been used to generate a consistent, property-wide structural geology model and vein set definition and chronology. Unmined mineralization was identified along underground workings and in historical diamond drill holes. Interpretation of the updated geologic model defined new vein sets and extensions of known vein sets. This data has been entered into a three-dimensional

computer model using MineSight® software to help with interpretations.

Emgold believes that there is significant potential to identify substantial additional gold resources on the I-M Project, and intends to continue with an ongoing gold exploration program. Once dewatering and access to the mine is achieved it is planned to establish underground drilling stations for further drill testing of key gold target areas, plus definition and expansion of known gold resources.

Gold Mineral Resource and Mineral Reserve Estimates

In 2002, Emgold completed a NI 43-101 Technical Report (required by regulatory authorities in Canada) on the Idaho-Maryland Mine prepared by AMEC Americas Limited (AMEC). The report summarized Measured, Indicated, and Inferred Mineral Gold Resources for the I-M Project. The resources for the I-M Project were estimated under the direction of Mark Payne (Registered Geologist 7067, State of California) and a Qualified Person for the purposes of NI 43-101, using traditional longitudinal sections, hand calculations and 3-D geologic models by commercial mine planning software (Vulcan® and MineSight®). AMEC's review concentrated on the geologic interpretation of the mineralization controls, the most critical factor in the resource estimate. Historic production information was also used in establishing confidence in continuity of mineralization. The mineral resource classification logic was also examined. Subsequent increases in the resource numbers have been estimated under the

direction of Robert Pease, Professional Geologist (California), Chief Geologist for the I-M Project, and a Qualified Person in accordance with National Instrument 43-101 in Canada.

The mineral resource classification of the I-M Project deposits used methods consistent with the CIM definitions referred to in National Instrument 43-101. Measured mineral resources are supported only in areas exposed by underground development and estimated from detailed underground sampling. The gold resources for the I-M Project are summarized in the following table:

Cautionary Note to U.S. Investors concerning estimates of Measured and Indicated Resources

This section uses the terms measured and indicated resources. We advise U.S. investors that while those terms are recognized and required by Canadian regulations, the U.S. Securities and Exchange Commission does not recognize them. **U.S. investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be converted into reserves.**

Summary Idaho-Maryland Gold Mineral Resource, March 1, 2007

Classification	True Thickness (ft)	Tonnage (ton)	Gold	Gold
			Grade (oz/ton)	w/ MCF (oz/ton)
Idaho-Maryland Resources ²				
Measured Mineral Resource ¹	13.3	271,000	0.22	0.31
Measured Mineral Resource ²	70.7	831,000	0.15	0.15
Indicated Mineral Resource	8.1	489,000	0.35	0.50
Measured + Indicated Mineral Resources	41.1	1,666,000	0.22	0.28

1. MCF = Mine Call Factor (not applicable to Waterman Group resources).

2. Idaho-Maryland measured resources are split into two categories: 1) the Eureka, Idaho, Dorsey, and Brunswick Groups, and 2) the Waterman Group (stockwork/slate type ore).

Cautionary Note to U.S. Investors concerning estimates of Inferred Resources

This section uses the term inferred resources. We advise U.S. investors that while this term is recognized and required by Canadian regulations, the U.S. Securities and Exchange Commission does not recognize it. Inferred resources have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an Inferred Mineral Resource will ever be upgraded to a higher category. Under Canadian rules, estimates of Inferred Mineral Resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. **U.S. investors are cautioned not to assume that part or all of an**

inferred resource exists, or is economically or legally mineable.

Classification	True Thickness (ft)	Tonnage (ton)	Gold Grade (oz/ton)	Gold Grade w/MCF (oz/ton)
Idaho-Maryland Resources ²				
Inferred Mineral Resources	9.1	2,573,000	0.27	0.39

Mine Call Factor

The call factor was determined from the historical mining information and was used while the mine was in operation to predict the head grade of ore fed to the mill. Historically the planned mill feed tonnage and gold grade rarely matched the actual results. This was a result of a variety of factors that could be resolved by adjusting the planned production by a constant number. This number or factor is called the multiplier factor or mine call factor.

Commonly, these deposit types typically under-predict the gold produced. Causes include poor sampling of high-grade material, inconsistent assaying procedures for the high-grade samples and, in places, the use of too low a bulk density number for the ore. Prior studies have included a detailed investigation into historic mine-mill reconciliation at the Idaho-Maryland mine. Analysis of data from later years (1950 to 1952), where the records of mine and mill production were kept in some detail and were traceable to parts of the mine, were examined and two factors were calculated: a "model" (underground sampling) to "mine" (muck car sampling) factor, equal to 1.21, and a "mine" to "mill" factor, calculated to be 1.19. The total Mine Call Factor is equal to 1.44. AMEC reviewed the work done by previous studies and has agreed with their results. The use of the Mine Call Factor can be used to establish a

relationship between the historic underground channel samples and expected production. This factor should only be used on the nuggety vein system data.

Industrial Minerals Resource and Mineral Reserve Estimates

When Emgold acquired the rights to the Ceramext® process in 2003, the Company realized that the I-M Project may host mineral resources suitable as feedstock for the process and potentially for aggregate production. Initial investigations of the meta-volcanic rock commenced in June 2004 with a geotechnical drilling program designed to obtain data for the design of a mine access ramp. Geological information from this program was also analyzed to determine if the rock excavated during ramp construction would be suitable feedstock for the Ceramext® process. The analysis included surface geologic mapping, outcrop sampling, sampling of the diamond drill core, and testing of samples to assess their suitability for ceramics manufacture. The result of these analyses was the definition of a large volume of igneous rocks of similar composition that were considered satisfactory as an industrial mineral resource suitable for ceramics manufacture. The industrial rocks are adequately defined by core drilling, but further testing, marketing, and production of ceramic products using the Ceramext® process, and the beginning of underground development will be necessary to upgrade this industrial rock into reserves. Sales contracts or actual sales may be required in order to prove the project's commerciality and then development into reserve status. No further core drilling of the meta-volcanics is planned until access is developed underground.

The 2004 Preliminary Assessment presents industrial minerals (ceramics feedstock) resources and gold resources for the I-M Project. The industrial minerals resource was delineated by seven geotechnical core holes drilled at inclinations of 40° and 45°, one exploration core hole, seven surface sample sites, and certain geologic data from historical underground mine drifts. The average top boundary of the resource is 200 ft (60 m) below the ground surface (due to depth of mineral rights). Drill hole spacing ranged from 80 ft to 1,200 ft (24 m to 366 m). The lower boundary of the resource is based on the bottom of the drill holes. The west boundary is where the amount of gabbro and ultramafic rocks begins to increase. The east boundary is based on the limit of geotechnical drilling and surface sampling.

Mine Planning and Scheduling

The Company is currently reviewing underground exploration opportunities and developing several mining scenarios to optimize access to gold resources for drilling and potential conversion to proven and probable mining reserves.

Metallurgy

AMEC reviewed the mill operating statistics for 1934, 1936, 1937, 1938, 1941, and 1947. Results indicate stable overall gold recoveries and metallurgical response to gravity, flotation, and cyanidation, with overall gold recoveries

ranging from 93.8% to 97.2%.

Tungsten was processed using gravity and flotation methods in the 1950s.

Overall gold recovery using modern technology should result in gold recoveries consistent with those achieved in the early milling circuits at the Idaho-Maryland mill. However, it can be expected that gold recovery using current gravitational equipment may exceed the recoveries attained (i.e., average 65%) in the 1930s and 1940s. Test work to determine the maximum gold recovery potential using gravity separation and concentration has been recommended. The gold recovery from gravity separation using modern technology may be approximately 80% to 85%, with overall recovery including flotation consistent with historical recoveries of 93.8% to 97.2%. This information is provided in detail in the Company's November 2002 NI 43-101 Technical Report and is discussed again in the November 2004 NI 43-101 Preliminary Assessment Technical Report.

Capital Cost Estimation

Estimation of capital costs for the I-M Project is ongoing and will be available upon completion of initial underground exploration and the preparation of a feasibility study.

Operating Cost Estimation

Estimation of operating cost for the I-M Project is ongoing and will be available upon completion of initial underground exploration and the preparation of a feasibility study.

Project Schedule

The CMUP is expected to be completed in late 2008 or early 2009. Construction of the I-M Project will be conducted in three Phases as outlined in the Project Application. After completion of the CMUP, financing activities will occur for Phase 1 of the project, consisting of dewatering, mine rehabilitation and development, and exploration. In 2009, it is expected that final operating permits for the mine will be obtained and engineering work for Phase 1 will be completed, along with initial site work.

Golden Bear Ceramics Company and the Ceramext® Worldwide License Agreement

Ceramext® License

Emgold, through its wholly owned subsidiary, Golden Bear Ceramics Company (Golden Bear), obtained the worldwide rights to the Ceramext® technology, subject to a monthly royalty of 3% of the gross sales revenue derived from the sales of physical products produced. Emgold paid Ceramext, LLC \$100,000 in February 2004 to cover certain development costs. Emgold also tendered to Ceramext, LLC 200,000 shares of the Company in 2004. The worldwide rights will remain in force based upon Golden Bear maintaining minimum royalty payments calculated on a quarterly basis that consisted of: Year 1 - \$nil per quarter; Year 2 - \$5,000 per quarter; Year 3 - \$10,000 per quarter; Year 4 - \$20,000 per quarter; Year 5 and thereafter - \$40,000 per quarter. Year 1 commenced 90 days after the date of approval of the agreement by regulatory authorities, which was February 12, 2004. For the year ended December 31, 2007, the company expended \$629,148 (2006 - \$1,590,754) on the acquisition and research of the technology, including \$80,000 (2006 - \$40,000) in advance royalties paid to Ceramext, LLC, pursuant to the agreement. The Company has made all required payments on the development of the Ceramext technology, and has satisfied the minimum royalty payments required to be paid to Ceramext, LLC for the worldwide rights. Payments commenced on March 21, 2005, pursuant to the terms of the agreement, and all payments have been made to the date of this Annual Report.

Ceramext® Process

Emgold believes that the Ceramext® process is an energy-efficient technology capable of converting a wide variety of siliceous waste materials and raw materials, including mine tailings, fly ash and other waste materials that would be disposed of in landfills into high-strength, low-porosity, industrial stone and ceramic building products such as, floor

tile, roof tile, brick, construction materials and other industrial and commercial products.

Ceramext, LLC has a patent on certain equipment and with other patents pending on the process and other equipment. The Ceramext® process has been demonstrated on a laboratory and pilot scale basis on a wide variety of materials including coal, lignite, and biomass fly ash, bottom ash, slag, clays, volcanic ash, fines from aggregate quarries, and mine development rock and tailings. Specifically, Golden Bear has used the Ceramext® process to test development rock and tailings from the I-M Project and has successfully produced high-quality stone and ceramic blanks suitable for forming into a wide variety of products using standard finishing technology. Independent marketing surveys conducted in California indicate that floor tiles, as a worst case, are worth approximately \$1.00 to \$1.50 per square foot of ceramic tile on a wholesale basis, which translates to approximately \$350 to \$600 per ton of feedstock to the process. Potential exists for much higher sales prices if the products can be marketed in the stone flooring sector at minimum costs of \$2.50 to \$3.50 per square foot, which translates into \$750 to \$1,000 per ton of feedstock.

Golden Bear has designed and is operating a pilot plant in Grass Valley, California. The Company is planning to complete marketing studies, a feasibility study and basic engineering of a production plant using the Ceramext® Process for converting mine tailings and other materials into high quality stone and ceramics on a commercial basis. The Ceramext® process could allow a mining or other industrial operation to make a useful and profitable product from mine development rock and tailings that would otherwise require expensive impoundment, and which generally consume large areas of land. The Ceramext® Process could create additional income from mining and industrial operations and allow them to continue to operate profitably even in times of very low commodity prices.

The use of the Ceramext® technology may also prove to eliminate the need for long-term storage of development rock, mine tailings and other industrial wastes, thereby reducing the environmental footprint.

The timely research and subsequent development of the Ceramext® technology could provide significant growth potential for an independent ceramics and stone manufacturing company and provide a new pathway for meeting a significant worldwide demand for high quality stone and ceramic products. In addition, the products are made from recycled material that would normally be disposed of in landfills. As such, Golden Bear's products will qualify for Leadership in Environmental and Energy Design (LEED) Credits and can be registered with the U.S. Green Build Council and other organizations. The green building product market is growing dramatically, and is in fact being legislated into existence in many jurisdictions. Golden Bear believes it is positioned to take advantage of this green market, and its products will obtain a premium price.

The Company may receive payments from its development partners against the costs of manufacturing samples produced from the demonstration-scale facility in the research product development phase. Scale of production will be limited by the size of the current research and development facility.

In 2005, the Company completed an initial ceramics marketing study. This comprehensive report has given the Company a detailed analysis of the North American ceramic tile and engineered stone markets and general market information about European markets, which is being used to assist the Company in developing designs of high quality stone and ceramic products. The study is assisting the Company in planning aesthetics, distribution channels, market segmentation and other factors that will impact product development costs and the initial phases of the Company's marketing strategy. Additional marketing and distribution definition and studies were conducted in fiscal 2006 and will be on-going in the future as commercialization of the technology and products advance, subject to financing of the Ceramext® process as a separate entity.

In 2006, the Company provided prototype samples for installation in a large dual use office / private residence for testing and marketing purposes. The samples were produced from the pilot-scale facility in the research product development phase. The scale of production is limited by the size of the current research and development equipment and facilities. If adequate financing can be obtained, test production may continue by modifying and increasing the size of the existing pilot plant and may be constructed in the Grass Valley facility or a nearby location.

In 2007, the development of the Ceramext® process has been limited to patenting and financing activities while the Company focuses on the permitting process for the I-M Project, the likely location of the first commercial manufacturing facility. Should sufficient funding be obtained and the schedule for the I-M Project be delayed, the Company would consider construction of a first commercial plant at a location other than the Idaho-Maryland Project.

The Company has an ongoing requirement to protect the intellectual property that is developing as an extension to the existing patented technology and patents pending and maintains a rigorous program to protect its trade secrets while applying for additional global patents. The Company has been offered opportunities to sell its technology and its stone materials for commercial use, but is not offering its technology and/or the ceramics produced for sale at this time. It has deferred any such sales in deference to the requirements of its intellectual property protection program and plans only to enter into marketing and research and development agreements and other similar arrangements that will not preclude its ability to continue to file patents to protect its technology.

I-M Project and the Ceramext® Technology

Materials from the I-M Project geotechnical-drilling program and from surface exposures have been evaluated for their suitability for commercial exploitation using Ceramext® technology. These have included historic Idaho-Maryland mine tailings and a variety of metamorphosed volcanic and intrusive igneous rocks derived from core samples and other exploration work. The goal was to determine which of the materials that will be processed during mine development and during ultimate gold processing may be suitable for use in manufacturing ceramic products.

The raw materials from the I-M Project processed and evaluated by Golden Bear appear to be fully suitable for commercial use via the Ceramext® process. Testing has shown materials can be produced with high strength and low porosity, both of which properties are important for producing high quality stone products. It must be pointed out that the optimum processing conditions for each composition and material have not been fully optimized as yet.

Each material requires slightly different processing parameters due to slight differences in composition and mineralogy. The fact that superior stone materials have been produced even without this optimization is important.

Emgold will reserve the right to use the Ceramext® technology to convert a portion of the development rock and tailings produced at the I-M Project into high quality manufactured stone and ceramics. Exploration for resource definition, early mining activities and partial mining operations may commence before a Ceramext® plant is constructed and operational on site.

In November 2004, a Preliminary Assessment for the I-M Project was prepared by AMEC using Measured, Indicated and Inferred Mineral Resources from the Idaho-Maryland Mine to evaluate the production of high quality ceramic building materials using the Ceramext® technology. Although the report is preliminary in nature, it identifies the necessary activities for staged development of the I-M Project and includes estimated capital and operating costs that may allow the historic mine to return to production as a gold and ceramics producer. The Preliminary Assessment describes the staged development of the I-M Project to produce 1,200 to 2,400 tons per day (tons/d) of ore and development rock. The development rock and tailings could then be used to produce from 160 million to 320 million equivalent square feet of ceramic tile per year.

The current plan deviates from the Preliminary Assessment with respect to the maximum ceramics production rate. The ceramics production is now planned to occur in two stages with initial production set at 600 tons/d then increasing to 1,200 tons/d. This translates into a maximum ceramic tile production of 160 million equivalent square feet of ceramic tile produced from 1,200 tons/d of development rock and tailings. It is anticipated that a new Preliminary Assessment for the I-M Project will be completed to further describe the new plans once sufficient working capital is available.

Successful application of the Ceramext® technology is expected to consume half of the tailings from the I-M Project with the other half returning underground as backfill. Excess development rock will be sold off site as aggregate. This eliminates the requirement for long-term surface storage of these materials. The successful production and sales of ceramic materials would allow Idaho-Maryland to continue with exploration of additional gold targets, and pre-production development, with the objective of defining an economic gold reserve while generating positive cash flow. The ultimate combination of a gold mine and processing facility, stone and ceramics manufacturing facility, and aggregate mine and processing facility would greatly enhance the economic viability of the I-M Project and allow it to withstand fluctuations in metal prices that often impact a stand alone gold mine.

Exploration Projects, British Columbia Properties

The Company has three early-stage exploration projects in British Columbia, Canada. The locations are shown on the map below, with details of the projects following.

The exploration projects on the Rozan, Stewart and Jazz properties have been planned and carried out under the supervision of Linda Dandy, P. Geo, and Perry Grunenberg, P. Geo both Qualified Persons for the purpose of National Instrument 43-101, Standards of Disclosure for Mineral Projects .

Stewart Property, British Columbia

The Stewart Property in British Columbia is without known mineral resources and reserves and the proposed programs are exploratory in nature.

Property Location and Geology

On July 25, 2001, the Company entered into an option agreement to acquire nine (9) mineral claims (82 units) located at latitude 49°14' N and longitude 117°20' W in the Nelson Mining Division near Nelson, British Columbia.

Previous owners reported two large gold soil anomalies on the Stewart Property, which is the reason the Company acquired the property. One of the anomalies had never been drilled and the second had had only four holes drilled. The reported average of all sample assays taken in the four holes was 0.29 g/t gold. The highest intervals were 1.87g/t gold over 2 meters in altered diorite in Hole 2, and 24.8 grams/tonne gold over one metre in a massive sulphide veins associated with quartz and calcite in Hole 4. The second gold anomaly reportedly had high gold soil geochemical values coincident with a strong induced polarization geophysical anomaly.

The property is also noted for hosting significant values in molybdenite and tungsten.

Option Agreement

Under the July 25, 2001, option agreement, Emgold is required to make payments totaling Cdn\$104,000 and to issue 260,000 common shares to the optionors over a six year period as follows: Cdn\$5,000 (paid) and 50,000 common shares upon regulatory approval (issued), Cdn\$5,000 (paid) on or before six months; Cdn\$10,000 (paid) and 50,000 common shares (issued) within 12 months; Cdn\$15,000 (paid) and 50,000 common shares (issued) within 24 months; Cdn\$20,000 (paid) and 50,000 common shares (issued) within 36 months; Cdn\$25,000 (paid) within 48 months, 60,000 common shares (issued) within 60 months following regulatory approval; and Cdn\$24,000 within 84 months following regulatory approval. An NSR of 3% is payable to the optionor provided that two-thirds (thus reducing the royalty to 1%) may be purchased for the sum of Cdn\$1,000,000. Emgold has first right of refusal on the remaining 1% NSR should the optionors wish to sell. To maintain its option, Emgold agreed to incur total exploration expenditures of Cdn\$49,200 over two years, which were incurred.

Exploration Activity

In 2005, Emgold completed a five-hole, 404-meter diamond drill program on its Stewart Molybdenum Project. The intent of the drill program was to test a zone of molybdenum mineralization and confirm the results from past drill programs conducted by previous operators. This work will allow Emgold to assess the potential for further exploration and possible development of the molybdenum (moly) zone.

This drilling was designed to determine the reliability of the historical resource estimate by comparing historic Shell Minerals results with those obtained by Emgold. The drill results obtained by Emgold compare well to the historical results from Shell Minerals exploration program. Additional modeling of the historic and current drilling was performed by Emgold to validate the molybdenum resource within the mineralized breccia zone, as well as to determine the potential for a larger low grade enveloping deposit within the host quartz monzonite porphyry rocks. Results from this drill program were considered encouraging and led to an additional exploratory drilling program which occurred during fall of 2007 to expand knowledge of the promising molybdenum mineralization in both the Phase II and Phase I breccia zones and surrounding porphyry host.

Trenching and drilling work was completed on the property during fiscal 2007. An assessment report on the exploration work was completed in 2007 and has been filed. Results from drilling and trenching are being reviewed in relation to historic exploration activity. Emgold completed 3,338 metres of diamond drilling in 30 drill holes on the property. A total of 1,285 core samples were obtained and shipped to a laboratory for analysis. The objectives of the fall 2007 drilling program were to further test and verify the strong molybdenum breccias mineralization outlined by drilling in 2005 as well as to test the strong tungsten mineralization encountered in trenching of the Arrow Tungsten zone.

Rozan Gold Property, British Columbia

The Rozan Gold Property in British Columbia is without known mineral resources and reserves and the proposed programs are exploratory in nature.

Option Agreement and Location

In 2000 the Company acquired 100% of the rights to the Rozan Gold Property, a prospect located south of the community of Nelson in the Red Mountain area of southeastern British Columbia. The Company earned its interest in the property by making stepped payments totaling Cdn\$100,000 and issuing 200,000 common shares. In fiscal 2006 the claims were transferred to the Company. The property is subject to a 3% NSR. The Company has the right to purchase 66 2/3% of the NSR for the sum of Cdn\$1,000,000 and has the first right of refusal to purchase the remaining 33 1/3%.

Exploration Activity

An initial work program on the Rozan property was completed in fiscal 2000, and exploration programs required for assessment purposes and under the terms of the option agreement have been completed each year.

A flow-through private placement of 160,000 common shares at a price of Cdn\$0.95, for a total of Cdn\$152,000 was completed during the year ended December 31, 2003. Funds from this financing were primarily used for an airborne geophysical survey over the Stewart and Rozan properties to clarify understanding of the nature of the gold occurrences and the possible sources of gold in the surrounding areas at a cost of approximately \$50,000. The surveys, flown in December 2003, were reviewed by an independent geophysical contractor who has identified several moderate to strong, well-defined electromagnetic conductors that may be representative of sulphide

mineralization, some of which are associated with magnetic gradients that could reflect faults and/or shears. Geologists have submitted applications for four drill sites on the Stewart property.

A small exploration program was completed in 2004 over the historic Flying Dutchman Zone. Historic reports and maps show that this area lies within altered Elise volcanic rocks and is crossed by numerous large quartz veins. During a 2001 prospecting program, grab sampling by Emgold from the waste dump of one of these workings returned an assay value of 29.68 g/t gold. A grab sample from a second waste dump located 400 meters away returned an assay of 1.82 g/t gold. A surface program located several of the numerous quartz veins described in the historic reports. A small soil-sampling grid put in over the area of quartz veining traced the gold mineralization in the veins across areas of limited outcrop exposure. The results show three sub-parallel, linear, gold soil geochemical anomalies that trend across the grid area for strike lengths of 300, 650 and 800 meters respectively.

During 2007, a single drill hole of 107.29 meters in length was completed on the property. This drill hole was designed to test the northern strike extension to the gold-bearing Rozan Main Vein. The highest assay returned from sampling of core was 0.2 grams per tonne over 1.7 meters. Further testing along the Main Vein, and within the stockwork mineralized zone to the east was postponed due to weather limitations.

Jazz Property, British Columbia

The Jazz Property in British Columbia is without known reserves and the proposed programs are exploratory in nature.

Option Agreement and Location

In March 2004, Emgold entered into an option agreement to acquire a 100% interest in the Jazz Property consisting of twenty-four mineral claims (24 units) located at latitude 49°17' N and longitude 117°21' W in the Nelson Mining Division near Nelson, British Columbia. The Jazz Property is contiguous to Emgold's Stewart Property and covers approximately 600 hectares. Under the terms of the agreement Emgold has agreed to make total cash payments of \$215,000 (\$45,000 paid) to the optionor over a ten-year period.

Exploration Activity

In 2004, the Company completed a small diamond drill program in the Craigtown Creek area and a rock-sampling program in the Free Silver area of the property. In the Craigtown Creek area, six short holes were drilled within an area containing two large, strong gold soil geochemical anomalies (totaling over 4 kilometres in length), with coincident airborne and/or ground geophysical targets. The source of the gold geochemistry was not determined during the exploration program but, because of its large size and highly anomalous nature, the target remains an important exploration target. For the Free Silver area, assay results for grab samples and chips were received for silver, lead and zinc. Silver grades ranged from 3.9 to 641 g/t, lead grades ranged from 0.12% to 35.47% and zinc

grades ranged from 0.11% to 25.99%. In conjunction with continuing to pursue the source of the gold soil geochemistry in the Craigtown Creek area, two additional zones of interest will be tested during the next phase of exploration, the Stewart 2 Moly Zone and the Free Silver areas.

Cash Expenditures

Emgold's principal cash capital expenditures (there have been no material divestitures) over the three fiscal years ended December 31, 2007, are as follows:

Year	Mineral Property Interests	Equipment
(i) Amounts Deferred (capitalized or invested)		
2007	942,448	274,565
2006	910,672	421,949
2005	859,531	523,090
2004	797,956	351,825

ii) Amounts expensed

Exploration Expenses

Year	Idaho Maryland	Stewart	Rozan	Jazz	Total
	\$	\$	\$	\$	\$
2007	2,349,453	714,656	111,255	12,770	3,188,134
2006	1,792,149	3,650	181	219	1,796,199
2005	1,604,900	71,250	1,780	(9,706)	1,668,224

ITEM 5.

OPERATING AND FINANCIAL REVIEW AND PROSPECTS

The following discussion and analysis should be read in conjunction with the audited consolidated financial statements of Emgold Mining Corporation for the years ended December 31, 2007, 2006, and 2005 and the related notes thereto. Emgold's consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles. Except as described fully in Note 14 to the consolidated financial statements, there are no material differences, for the purposes of the consolidated financial statements, between accounting principles generally accepted in Canada and the United States.

Overview

Emgold is a mineral exploration company with no producing properties and consequently has no current operating income or cash flow. All of Emgold's short to medium-term operating and exploration cash flow must be derived from external financing. Emgold expects to raise additional financing to continue its planned exploration, permitting and development of its Idaho-Maryland Mine and to separately finance the commercialization of the Ceramext® process.

Critical accounting policies and changes in accounting policies

The preparation of financial statements requires management to establish accounting policies, estimates and assumptions that affect the timing and reported amounts of assets, liabilities, revenues and expenses. These estimates are based upon historical experience and on various other assumptions that management believes to be reasonable under the circumstances, and require judgment on matters which are inherently uncertain. A summary of

the Company's significant accounting policies is set out in Note 2 of the consolidated financial statements for the years ended December 31, 2007, 2006, and 2005.

Recent accounting pronouncements

Recent accounting pronouncements issued which may affect the Company in the future are as follows:

Capital disclosures

CICA handbook section 1535, *Capital Disclosures*, establishes standards for disclosing information about the Company's capital and how it is managed.

This standard is effective for interim and annual financial statements beginning on or after October 1, 2007. The Company is currently evaluating the impact of adoption of this new standard on the disclosures in the consolidated financial statements.

Financial instruments disclosures

In February 2007, the CICA issued handbook section 3862, *Financial Instruments Disclosure* and section 3863 *Financial Instruments Presentation* which are effective for fiscal years beginning on or after October 1, 2007. CICA handbook section 3862, *Financial Instruments Disclosures*, requires entities to provide disclosure of quantitative and qualitative information in their financial statements. This information enables users to evaluate the significance of financial instruments on the Company's operations and the nature and extent of risks arising from financial instruments to which the Company is exposed during the period and at the balance sheet date. The Company will be required to disclose the measurement bases used for its financial instruments as well as the criteria used to determine the classification for different types of instruments.

The purpose of CICA handbook section 3863 *Financial Instruments Presentation* is to enhance the financial statement users' understanding of the significance of financial instruments to the Company's financial position, performance and cash flows.

The Company is currently evaluating and determined the impact of the adoption of these changes on the disclosure in the consolidated financial statements.

General standards on financial statement presentation

CICA handbook section 1400, *General Standards on Financial Statement Presentation*, has been amended to include requirements to assess and disclose a Company's ability to continue as a going concern. The changes are effective for interim and annual financial statements beginning January 1, 2008. The Company is currently evaluating and determined the impact of the adoption of these changes on the disclosure in the consolidated financial statements.

Goodwill and intangible assets

CICA handbook section 3064, *Goodwill and intangible assets*, establishes revised standards for recognition, measurement, presentation and disclosure of goodwill and intangible assets by profit-oriented enterprises. The effective date of this new standard applies to fiscal years beginning January 1, 2009. The Company is currently evaluating and determined the impact of the adoption of these changes on the disclosure in the consolidated financial statements.

A.

Operating Results

Year Ended December 31, 2007, (fiscal 2007) Compared to Year Ended December 31, 2006 (fiscal 2006)

Emgold's loss in fiscal 2007 was \$5,836,129, or a loss per share of \$0.06, compared to a loss of \$5,124,327, or a loss per share of \$0.08 in fiscal 2006.

During fiscal 2007 the Company earned interest income of \$86,310 on excess cash balances compared to \$45,133 in fiscal 2006. The increase was due to interest earned on significantly higher average cash balances held in fiscal 2007 compared to fiscal 2006.

During fiscal 2007, the Company recognized a recovery of future income taxes of \$221,734. This future income tax recovery relates to the renouncement of flow-through expenditures in fiscal 2007 associated with 2,283,000 flow-through units issued in fiscal 2006 at a price of Cdn\$0.38 per unit for gross proceeds of Cdn\$850,440. No such recovery occurred in fiscal 2006.

General and administrative expenses:

Amortization expenses relating to general and administrative activities decreased from \$88,291 in fiscal 2006 to \$76,423 in fiscal 2007. The decrease relates to certain hardware and software being fully amortized in 2007.

A foreign exchange loss of \$15,771 in fiscal 2006 compares to an exchange loss of \$63,988 in fiscal 2007. The debt portion of preference shares is denominated in Canadian dollars and is therefore also subject to exchange rate fluctuations. Fluctuations in currency affected operations to a slightly greater degree in fiscal 2006, as late in the year a significant portion of the Company's funds were held in Canadian dollars, and most expenditures by the Company are incurred and paid in United States dollars, so were subject to more volatility in the Canada and United States exchange rates.

Finance expenses increased from \$48,614 in fiscal 2006 to \$54,692 in fiscal 2007. The finance expense relates to interest on convertible preference shares which are denominated in Canadian dollars and vary as the exchange rates fluctuate.

Legal, accounting and audit fees decreased slightly from \$115,352 in fiscal 2006 to \$107,383 in fiscal 2007. The decline is due to a reduction in legal expenses from \$51,128 in fiscal 2006 to \$30,287 in fiscal 2007 as a result of reduced activity. This was offset by an increase in audit and taxation fees.

Management and consulting fees increased from \$60,827 in fiscal 2006 to \$107,996 in fiscal 2007. Included in consulting fees is \$58,566 (2006 - \$33,353) paid to Kent Avenue Consulting Ltd., a private company controlled by an officer and director of the Company. In fiscal 2007, consulting fees of \$49,430 (2006 - \$Nil) were also paid to 759924 Ontario Ltd., a private company controlled by an officer and director of the Company. The fees paid to Kent Avenue Consulting Ltd. were paid through LMC Management Services Ltd. (LMC) in the first three quarters of fiscal 2007. Management and consulting fees of Cdn\$2,500 per month were previously paid to Lang Mining Corporation, a private company, until June 2006.

Office and administration expenses in fiscal 2006 of \$451,710 compare to \$372,647 in fiscal 2007. Administrative expenses include telephone, courier and other direct costs. The expense decreased compared with the previous year as a result of various fluctuations in other direct costs including a one-time recruitment fee in 2006 of \$38,000, a reduction in utilities expense of \$16,300 as a result of sharing of office space and a reduction in insurance expenses of \$13,000 due to a change in coverage from a Company specific policy to an umbrella policy for LMC.

Other consulting fees decreased from \$30,089 in fiscal 2006 to \$18,844 in fiscal 2007. The Company hired consultants at a cost of \$30,089 in fiscal 2006 to assist Golden Bear in a review of the ceramics industry and associated markets. In fiscal 2007 the project was finalized with the remaining \$18,844 incurred during 2007.

Salaries and benefits increased from \$573,250 in fiscal 2006 to \$798,509 in fiscal 2007. The primary reason for the increase was severance costs incurred during the fourth quarter of 2007. The Company accepted the resignation of William J. Witte, as President and Chief Executive Officer of Emgold during 2007. Mr. Witte continues to serve as a director of Emgold but is no longer an officer of the Company. Ian Chang, Vice-President, Project Development

and David Sinitsin, Vice-President, Engineering and Construction also resigned from Emgold during 2007; however, these individuals remain as officers and directors of the Company's subsidiary, Golden Bear Ceramics. Severance costs with respect to these individuals were \$329,000. In 2006, the Company incurred severance costs of \$85,000 to certain employees directly related to Golden Bear.

Shareholder communications costs increased from \$192,248 in fiscal 2006 to \$209,700 in fiscal 2007. These costs include dissemination of news releases, transfer agent, regulatory and filing fees as well as fees associated with the maintenance of the Company's website. The increase relates primarily to increased investor relations activity compared with the previous year.

Stock-based compensation increased from \$107,462 in fiscal 2006 to \$559,337 in fiscal 2007. The Company granted 7,890,000 options in the fourth quarter of 2007 all of which were vested immediately compared with 820,000 stock options granted in 2006. Stock-based compensation of \$65,526 in fiscal 2006 and \$399,830 in fiscal 2007 was recorded within general and administrative expenses as a separate line item on the statement of operations. In addition, \$11,139 in fiscal 2006 and \$53,169 in fiscal 2007 was also included in Ceramext® research costs and \$30,797 in fiscal 2006 and \$106,338 in fiscal 2007 was included in exploration costs.

Travel expense decreased from \$126,360 in fiscal 2006 to \$104,057 in fiscal 2007. Travel, air and hotel accommodation costs have increased in general; however, the Company has reduced the number of trips to destinations other than the United States.

Research and development expenses:

In fiscal 2007 the Company incurred \$629,148 in expenditures directly related to the development of the Ceramext® Process compared to \$1,590,754 in fiscal 2006. The Company's expenditures related to the development of the Ceramext® Process are currently limited to permitting of a manufacturing facility as part of the Idaho-Maryland Project, advance royalties, and intellectual property protection costs. Expenses include \$86,792 in site costs related primarily to the warehouse rental for the pilot plant and laboratory equipment, amortization expenses relating to equipment of \$80,248, Ceramext® technology royalties of \$80,000 and engineering costs of \$304,246 which include management time and planning related to the development of a business plan for the potential separation of the Golden Bear as a separate business entity.

Exploration expenses - Idaho-Maryland Project:

Direct exploration expenditures on the I-M Project increased from \$1,792,149 in fiscal 2006 to \$2,349,453 in fiscal 2007. Site activities and geological and geochemical costs include the ongoing digitization and evaluation of historical data, mine modeling and scheduling, cost modeling, geologic modeling, engineering and environmental studies, and permitting.

Planned expenses in fiscal 2008 for the I-M Project include the activities associated with the continuing application process for a CMUP, on-going geologic investigations and exploration, financing and public outreach activities.

Exploration expenses - British Columbia Properties

Exploration expenditures on the Rozan, Stewart and Jazz properties were \$838,681 in fiscal 2007 compared to \$4,050 in fiscal 2006. All share and cash payments due in fiscal 2007 on the Company's mineral property interests in British Columbia were made, or renegotiated to make payments in the form of shares to conserve cash. The Company incurred \$111,255 in fiscal 2007 compared with \$181 in fiscal 2006 on the Rozan Gold Property, \$714,656 in fiscal 2007 compared with \$3,650 in fiscal 2006 on the Stewart Property and \$12,770 in fiscal 2007 compared with \$219 on the Jazz Property.

Year Ended December 31, 2006, (fiscal 2006) Compared to Year Ended December 31, 2005 (fiscal 2005)

Emgold's loss in fiscal 2006 was \$5,124,327, or a loss per share of \$0.08, compared to a loss of \$5,245,165, or a loss per share of \$0.09 in fiscal 2005.

During fiscal 2006 the Company earned interest income of \$45,133 on excess cash balances compared to \$109,458 in fiscal 2005. The decrease was due to interest earned on significantly lower cash balances held in fiscal 2006 compared to fiscal 2005.

General and administrative expenses:

Legal, accounting and audit fees increased slightly from \$114,557 in fiscal 2005 to \$115,352 in fiscal 2006. Fiscal 2006 accounting and audit costs increased due to increasing regulatory and reporting requirements. The Company files an Annual Report on a Form 20-F, which results in significant legal and accounting costs relating to the preparation of the document, but these costs were lower in fiscal 2006, as the initial filing, which attracted significantly higher legal costs, was in fiscal 2005.

Office and administration expenses in fiscal 2005 of \$448,357 compare to \$451,710 in fiscal 2006. These included telephone, courier and other direct costs. A portion of rent, telephone and other related direct expenses was included in exploration expenses and in the Ceramext® research costs.

Management and consulting fees of \$60,827 in fiscal 2006 compare to \$31,582 in fiscal 2005. In fiscal 2006, Cdn\$15,000 (2005 - Cdn\$30,000) were paid to Lang Mining Corporation, a private company, for the services of the former chairman of the Company. Included in consulting fees in fiscal 2006 is Cdn\$38,000 (2005 - Cdn\$7,500) paid to a private company controlled by a director of the Company.

The Company hired consultants at a cost of \$68,600 in fiscal 2005 compared to \$30,089 in fiscal 2006 to assist the Company in a review of the ceramics industry and associated markets.

A foreign exchange loss of \$8,148 in fiscal 2005 compares to an exchange loss of \$15,771 in fiscal 2006. The debt portion of preference shares is denominated in Canadian dollars and is therefore also subject to exchange rate fluctuations. Fluctuations in currency affected operations to a slightly greater degree in fiscal 2006, as late in the year a significant portion of the Company's funds were held in Canadian dollars, and most expenditures by the Company were incurred and paid in United States dollars, so were subject to more volatility in the Canada and United States exchange rates.

Salaries and benefits of \$558,717 in fiscal 2005 compares to \$573,250 in fiscal 2006. The increase in salaries and benefits in fiscal 2006 reflected the increased activity at the I-M Project and the related management, administrative and accounting time related to the processing of transactions, regulatory requirements, and other administration activities. In November 2006 several employees that were directly related to the ceramics process were laid off due to the focus on the permitting and the future reorganization of the Company with respect to the ceramics technology. Severance costs were approximately \$85,000.

Two senior level vice presidents, engineers with many years of experience in mining development and operations, were hired in the spring of 2006 to assist the Company in the development and construction of the I-M Project.

Shareholder communications costs of \$288,216 in fiscal 2005 compare to \$192,248 in fiscal 2006. Shareholder communication costs were a significant expense due to the increased shareholder and investor interest in the Company and the related costs of informing shareholders, the financial community and potential new investors about the Company's activities. These costs included dissemination of news releases, transfer agent, regulatory and filing fees as well as fees associated with the maintenance of the Company's website.

Effective July 1, 2004, Emgold retained the Los Angeles area firm of Michael Baybak and Company, Inc. (MBC) to conduct investor relations programs oriented towards institutional investors on behalf of the Company. The Company had been paying MBC a monthly fee of \$5,000. During fiscal 2005, a total of \$77,500 was paid to MBC, compared to \$80,032 in fiscal 2006. This included fees and reimbursement of expenses, including fax and email distributions.

The Company also retained investor relations services through its current management service provider, LMC Management Services Ltd. (LMC). Until June 2005, LMC provided the services of Mr. Mark Feeney, an investor relations and public relations professional, on a month-to-month basis, not to exceed \$5,500 per month. During fiscal 2005, \$15,445 was paid to LMC for Mr. Feeney's services with no comparative expense in fiscal 2006. The Company also paid \$49,638 to High Visibility Public Relations for public relations services in fiscal 2005 with no comparative expense in fiscal 2006, as the contract with High Visibility was terminated effective December 31, 2005.

In November 2005, Emgold appointed Michael E. O'Connor as Manager, Investor Relations. Mr. O'Connor was a full-time employee of LMC and provided services on an on-going basis to the Company through an existing LMC/Emgold services agreement. The Company paid LMC for Mr. O'Connor's services and his salary was included in salaries and benefits. Mr. O'Connor left the Company in March 2008.

Included in operating expenses in fiscal 2006 was a total of \$107,462 in stock-based compensation compared with \$190,326 in stock-based compensation in fiscal 2005. Stock-based compensation of \$41,936 in fiscal 2006 and \$46,347 in fiscal 2005 was also included in Ceramext® research costs and in exploration costs.

Travel expense decreased nominally from \$131,770 in fiscal 2005 to \$126,360 in fiscal 2006, although travel, air and hotel accommodation costs have increased in general. Management had been giving several presentations in Europe and North America to the investment community to increase awareness of Emgold, although international travel to destinations other than the United States decreased in fiscal 2006.

Research and development expenses:

In fiscal 2006 the Company incurred \$1,590,754 in expenditures directly related to the development of the Ceramext® Process compared to \$1,769,659 in fiscal 2005. Cumulative research and development expenses on related to the Ceramext® Process to December 31, 2006, were \$4,383,098. The existing pilot plant was used to test many different materials to determine various processing parameters. Various materials produced were evaluated with physical testing (i.e., modulus of rupture and porosity) as well as microscopy and polishing/gloss measurement, which provided new insights into the process.

Marketing and aesthetic studies were undertaken in fiscal 2005, at a cost of \$351,000. These studies examined the market for a wide range of products that could be manufactured using the waste materials from the IM Project or other operations that produce waste that could be utilized in the process. Planned activities with additional financing included further testing, preparation of patent applications, analysis and determination of products and product aesthetics based on marketing studies, and testing and development of additional methods for creating ceramic materials.

Exploration expenses Idaho-Maryland Project:

Direct exploration expenditures on the I-M Project increased from \$1,604,900 in fiscal 2005 to \$1,792,149 in fiscal 2006. Site activities and geological and geochemical costs included the ongoing digitization and evaluation of historical data.

Geologic mapping of the I-M Project and digitizing of the historic workings into MineSight™ was completed in 2005. This is the first update of a geologic map of the I-M Project in over 60 years, and the Company utilized the data in computer assisted drafting for mine planning and in MineSight™ modeling.

Exploration expenses - British Columbia Properties

Exploration expenditures on the Rozan, Stewart and Jazz properties totaled \$4,050 in fiscal 2006 compared to \$79,165, before government assistance and recoveries of \$15,841 received in fiscal 2005. All share and cash payments due in fiscal 2006 on the Company's mineral property interests in British Columbia were made, or renegotiated to make payments in the form of shares to conserve cash. The Company completed a brokered private placement of 2,238,000 flow-through units at a price of Cdn\$0.38 per FT unit for gross proceeds of Cdn\$850,440 during 2006 and these funds were used to complete a fall 2007 drilling program on the Stewart Property as well as some limited drilling on the Rozan property.

B.

Liquidity and Capital Resources

Year ended December 31, 2007

Historically, the Company's sole source of funding was the issuance of equity securities for cash, primarily through private placements to sophisticated investors and institutions. The Company has issued common shares in each of the past few years, pursuant to private placement financings and the exercise of warrants and options.

Investing Activities

Idaho Maryland Project

As at December 31, 2007, Emgold capitalized \$942,448 (2006 - \$910,672) representing acquisition costs associated with the acquisition of its mineral property interests in California and British Columbia. The Company also has equipment with a book value of \$274,565 (2006 - \$421,949). Total equipment purchases in the year ended December 31, 2007, totaled \$15,594. Amortization of \$156,274 on equipment was recorded in fiscal 2007.

Stewart Property, British Columbia

In 2001 the Company entered into an option agreement to acquire the rights to the Stewart mineral claims, a prospect located close to Nelson in south-eastern British Columbia. The Company may earn a 100% interest in the property by making payments totalling Cdn\$104,000 (Cdn\$80,000 paid) and issuing 260,000 common shares (260,000 issued) by 2009. The property is subject to a 3.0% net smelter returns royalty (NSR), of which the Company has the right to purchase 66 2/3% of the royalty for the sum of Cdn\$1,000,000 and has the first right of refusal to purchase the remaining 33 1/3%.

During 2006 the Company completed a brokered private placement of 2,238,000 flow-through units (the FT Units) at a price of Cdn\$0.38 per FT Unit for gross proceeds of Cdn\$850,440 (USD \$729,741). Funds from this financing were primarily used for a fall 2007 diamond drilling program in relation to the Stewart Property.

In fiscal 2007, \$714,656 (2006, \$3,650) in exploration costs, net of assistance and recoveries, was incurred on the property. Trenching and drilling work was completed on the property during fiscal 2007 as referred to in Part 4.

Jazz Property, British Columbia

In March 2004, Emgold entered into an option agreement to acquire a 100% interest in the 600-hectare Jazz Property consisting of twenty-four mineral claims contiguous to the Stewart Property. Under the terms of the agreement Emgold has agreed to make total cash payments of \$215,000 (\$45,000 paid) to the optionor over a ten-year period.

In fiscal 2007, \$12,770 (2006 - \$219) in exploration costs, net of assistance and recoveries, was incurred on the property primarily on geological studies as referred to in Part 4.

Rozan Gold Property, British Columbia

In 2000 the Company entered into an option agreement to acquire the rights to the Rozan Gold Property, a prospect located south of the community of Nelson in the Red Mountain area of south-eastern British Columbia. The Company earned a 100% interest in the property by making stepped payments totalling Cdn\$100,000 and issuing 200,000 common shares by April 1, 2006. The property is subject to a 3.0% NSR. The Company has the right to purchase 66 2/3% of the royalty for the sum of Cdn\$1,000,000 and has the first right of refusal to purchase the remaining 33 1/3%. The final payment of Cdn\$30,000 was made in fiscal 2006, and the Company acquired a 100% interest in the property, subject to a 3.0% NSR from production.

In fiscal 2007, \$111,255 (2006 - \$181) in exploration costs was incurred on the property. Trenching and drilling work was completed during 2007 as referred to in Part 4

Capital Resources

At December 31, 2007, Emgold's working capital, defined as current assets less current liabilities, was \$4,563,485, compared to \$2,474,301 at December 31, 2006. The Company's continued operations are dependent upon the Company's ability to obtain sufficient financing to carry on planned operations.

At December 31, 2007, the Company had 156,489,642 common shares issued and outstanding and 3,948,428 Class A preference shares, which are convertible to 987,107 common shares. Dividends deemed to have been paid could also result in dilution of approximately 359,455 shares at December 31, 2007. During the year ended December 31, 2007, the Company completed a private placement of 72,730,236 units at a price of Cdn \$0.11 per unit, for gross proceeds of Cdn \$8 million (USD \$8 million). Each unit was comprised of one fully paid and non-assessable common share of the Company and one transferable common share purchase warrant. Each warrant entitles the holder to subscribe for one additional previously unissued common share (a warrant share) in the capital of the Company for a period of 24 months following the date of issue at an exercise price of Cdn\$0.15 per warrant share.

The share purchase warrants were issued in three tranches of 54,454,069 on September 27, 2007, 7,266,000 on October 5, 2007 and 11,010,167 on October 12, 2007. The value attributable to the transferable common share purchase warrants was Cdn\$0.03 per warrant. Fees and costs of \$685,000 associated with the private placement including finders' fees were netted against gross proceeds with approximately \$518,000 allocated to the non-assessable common shares and \$167,000 allocated to the transferable common share purchase warrants based on their relative values at the issuance dates.

Of these units, 6,236,166 were sold in the United States to accredited investors, as that term is defined by Securities and Exchange Commission (SEC) Rule 501, pursuant to an exemption from registration under the Securities Act of 1933, as amended (the Securities Act) provided by SEC Rule 506 of Regulation D. In the United States, the Company's agent, Canaccord Capital Corporation USA, Inc., which is a registered broker-dealer in the United States, Arizona and California, placed the units. Section 18(a)(1) of the Securities Act provides that the issuance of covered securities pre-empts state laws relating to the registration or qualification of securities. The units were sold in Arizona and California for the account of the Company pursuant to SEC Rule 506, and are therefore covered securities, as defined by Section 18(b)(4)(D) of the Securities Act.

Finders' fees to eligible finders (the Finders) were paid in amounts equal to 8% of proceeds raised by such Finders, and non-transferable warrants (the Finder's Warrants), equal to 8% of the number of units sold by such finders were also issued. Each of the Finder's Warrants is exercisable to acquire a unit of the Company (the Finders Units) at a price of Cdn\$0.11 per Finders Unit for a period of 18 months from the date of issuance. Each Finder's Unit is comprised of one common share of the Company and one non-transferable common share purchase warrant of the Company exercisable to acquire one additional common share of the Company for a period of 24 months from the date of issuance of the Finder's Warrant at a price of Cdn\$0.15. At December 31, 2007, 4,981,803 Finder's Warrants and Finder's Units were issued. The Finder's Warrants and Finder's Units were issued in three tranches of 3,831,323 on September 27, 2007, 508,080 on October 5, 2007 and 642,400 on October 12, 2007. The value attributable to these Finder's Units and Finder's Warrants was Cdn \$0.03 per Finder's Unit and Finder's Warrant.

Proceeds from the private placements have been used to fund further exploration and development of the Company's I-M Project in Grass Valley, California.

Additional financing will likely be required in fiscal 2008 in order for the I-M Project and the Company to move forward as scheduled. The Company currently does not have sufficient working capital for the next full year of operations and will therefore need to raise additional capital to continue operations, as it currently has no source of revenue. Such financing may be achieved through the exercise of share purchase warrants and through the issuance of common shares.

The securities offered have not been registered under the United States Securities Act of 1933, as amended, and may not be offered or sold in the United States absent registration or an available exemption from the registration requirements.

Warrants

As at December 31, 2007, the following share purchase warrants were outstanding:

Number of Warrants	Exercise Price	Expiry Date
713,100	Cdn\$1.00	September 15, 2008
14,344,105	Cdn\$0.40	December 6, 2008
1,119,000	Cdn\$0.50	December 6, 2008
179,040	Cdn\$0.26	December 6, 2008
1,147,529	Cdn\$0.26	December 6, 2008
89,520*	Cdn\$0.50	December 6, 2008
1,147,529*	Cdn\$0.40	December 6, 2008
54,454,069	Cdn\$0.15	September 27, 2009
3,831,323	Cdn\$0.11	March 27, 2009
3,831,323*	Cdn\$0.15	March 27, 2009
7,266,000	Cdn\$0.15	October 5, 2009
508,080	Cdn\$0.11	April 5, 2009
508,080*	Cdn\$0.15	April 5, 2009
11,010,167	Cdn\$0.15	October 12, 2009
642,400	Cdn\$0.11	April 12, 2009
642,400*	Cdn\$0.15	April 12, 2009
	Weighted Average Exercise Price: Cdn\$0.20	
101,433,665		

*Reserved for underlying warrants upon the exercise of broker and finder's warrants.

All outstanding warrants in the table above, other than the warrants with an exercise price of Cdn\$0.11 and \$0.15 are exercisable at a higher price than the current trading price of the Company's shares.

Preference Shares

Mr. Frank A. Lang and Lang Mining Corporation (collectively "Lang") were major creditors of the Company as a result of advances made over a prolonged period in providing financial support to the Company. In 2002, the Company entered into an agreement with Lang to issue 3,948,428 Series A First Preference shares in full satisfaction of an aggregate \$501,678 of indebtedness owing to Lang. Terms of the preferred share issuance are described below.

The Series A First Preference Shares rank in priority to the Company's common shares and are entitled to fixed cumulative preferential dividends at a rate of 7% per annum. At December 31, 2007, \$284,146 (2006, \$194,148) has been accrued in accounts payable in relation to the 7% fixed cumulative preferential dividends.

The shares are redeemable by the Company at any time on 30 days of written notice at a redemption price of Cdn\$0.80 per common share, but are redeemable by the holder only out of funds available that are not in the Company's opinion otherwise required for the development of the Company's mineral property interests or to maintain a minimum of Cdn\$2 million in working capital.

As is required by accounting standards, the value of the convertible preference shares was split into a debt component and an equity component. This resulted in \$90,902 being included in equity. At December 31, 2007 the value included in debt as preference shares, after adjusting for accretion and foreign exchange losses on debt was \$750,624 (2006 - \$626,724).

The Series A First Preference Shares are non-voting unless and until the Company fails for any period aggregating two years or more to pay dividends, in which case they will carry one (1) vote per share at all annual and special meetings of shareholders thereafter.

The Company has no long-term debt other than the Class A preference shares described above.

Option Payments in 2007

See Item 5(f) for a table of contractual obligations at December 31, 2007.

Mineral Property Option Payments and Exploration Programs for Fiscal 2007

Year ended December 31, 2006

Investing Activities

As at December 31, 2006, Emgold capitalized \$910,672 (2005 - \$859,531) representing acquisition costs associated with the acquisition of its mineral property interests in California and British Columbia. The Company also had equipment with a book value of \$421,949, compared to \$523,090 at December 31, 2005. Total equipment purchases in the year ended December 31, 2006, totaled \$88,440, including a vehicle under capital lease. Amortization of \$158,181 on equipment was recorded in fiscal 2006.

Capital Resources

At December 31, 2006, Emgold's working capital, defined as current assets less current liabilities, was \$2,474,301, compared to \$3,136,560 at December 31, 2005. The Company's continued operations are dependent upon the Company's ability to obtain sufficient financing to carry on planned operations.

At December 31, 2006, the Company had 83,759,406 common shares issued and outstanding and 3,948,428 Class A preference shares, which are convertible to 987,107 common shares. Dividends deemed to have been paid could also result in dilution of approximately 283,000 shares at December 31, 2006. During the year ended December 31, 2006, the Company:

(1)

Completed a private placement of 1,426,202 units at a price of Cdn\$0.60 per unit, for gross proceeds of Cdn\$855,721. Each unit was comprised of one common share and one-half of one non-transferable share purchase warrant. Each whole share purchase warrant will entitle the holder to purchase one additional common share for a period of 24 months from issue, at an exercise price of Cdn\$1.00 per share. The share purchase warrants were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate of 4.1%; volatility factor of 74%; and an average expected life of two years. The value attributed to these non-transferable share purchase warrants was Cdn\$0.11 per warrant.

Of these units, 641,000 were sold in the United States to accredited investors, as that term is defined by Securities and Exchange Commission (SEC) Rule 501, pursuant to an exemption from registration under the Securities Act of 1933, as amended (the Securities Act) provided by SEC Rule 506 of Regulation D. In the United States, the Company's agent, Canaccord Capital Corporation USA, Inc., which is a registered broker-dealer in the United States, Arizona and California, placed the units. Section 18(a)(1) of the Securities Act provides that the issuance of covered securities pre-empts state laws relating to the registration or qualification of securities. The units were sold in Arizona and California for the account of the Company pursuant to SEC Rule 506, and are therefore covered securities, as defined by Section 18(b)(4)(D) of the Securities Act.

(2)

Completed a brokered private placement of 14,344,105 units at a price of Cdn\$0.26 per unit. Each unit was comprised of one common share and one share purchase warrant. Each share purchase warrant will entitle the holder to purchase one additional common share at an exercise price of Cdn\$0.40 per common share until December 6, 2008.

The value attributed to these non-transferable share purchase warrants was Cdn\$0.07 per warrant. The Company issued an aggregate of 1,147,529 compensation warrants exercisable until December 6, 2008, at a price of Cdn\$0.26 per warrant, for which the warrant holder will receive one common share and a warrant exercisable at Cdn\$0.40 until December 6, 2008. In addition, the Company paid an aggregate of approximately Cdn\$345,000 in fees to the agent and certain finders in connection with this transaction and the issuance of flow-through shares described below. The total value attributed to each of the compensation share purchase warrants on the non flow-through shares was Cdn\$0.25. The share purchase warrants and compensation warrants were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate of 3.8%; volatility factor of 73%; and an average expected life of the warrants of two years.

(3)

Completed a brokered private placement of 2,238,000 flow-through units at a price of Cdn\$0.38 per FT unit for gross proceeds of Cdn\$850,440. Each FT Unit is comprised of one (1) flow-through

common share (FTS) and one-half of one non-flow-through share purchase warrant. Each whole share purchase warrant entitles the holder to purchase one additional common share at an exercise price of Cdn\$0.50 per share until December 6, 2008. The share purchase warrants were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate of 3.8%; volatility factor of 73%; and an average expected life of the warrants of two years. Commissions of 8% were paid with respect to the financing. The gross proceeds value attributed to the non-transferable share purchase warrants on the FTS was Cdn\$0.05 per warrant. No FTS expenditures were renounced at December 31, 2006. The Company renounced flow-through expenditures in March 2007 relating to the year ended December 31, 2006. The Company issued an aggregate of 179,040 compensation warrants exercisable until December 6, 2008, at a price of Cdn\$0.26 per warrant, for which the warrant holder will receive one common share and one half-warrant exercisable at Cdn\$0.50 until December 6, 2008. The total value attributed to each of the compensation share purchase warrants was Cdn\$0.23. On issuance of FTS, the entire proceeds of the issuance are recorded as share capital. The Company subsequently records a future income tax liability, and a reduction in share capital, on the date that the Company files the renouncement documents with the tax authorities. In 2006, the Company issued by way of private placement 2,238,000 FTS at Cdn\$0.38 per share. The gross proceeds of this placement are considered to be restricted cash for US GAAP purposes, as these funds are to be expended on exploration in Canada in order to satisfy the requirements of the renouncement to the investors. At December 31, 2006 this amount totaled \$729,741. The Company received a net premium to market on this issuance of \$136,499, which was recorded in share capital as part of the transaction. For U.S. GAAP purposes, SFAS 109 *Accounting for Income Taxes* (SFAS 109) indicates that the proceeds of FTS offerings should be allocated between the offering of the shares and the sale of tax benefits when the shares are offered. The allocation was made based on the difference between the quoted price of the shares and the amount the investor pays for the flow-through shares.

Proceeds from the first two private placements were used to fund further exploration and development of the Company's I-M Project in Grass Valley, California, on-going development and commercialization of the Ceramex® process and for general administrative purposes.

The funds from the private placement in (3) were used for exploration on the Company's mineral property interest in British Columbia, Canada. FTS are used to finance Canadian minerals and petroleum exploration and were originally introduced to address the exploration financing inequity which arose between major and junior exploration companies.

United States residents who pay no income tax in Canada would not obtain any benefits from the purchase of flow-through shares. The flow through facility of the common shares cannot be used by taxpayers in the United States. The cost base of the shares, if purchased by United States investors, would be the issue price of the common share.

The major mining companies can deduct exploration expenditures for tax purposes, but the junior mining companies normally cannot because they lack taxable income. Flow-through investors can deduct their investments from otherwise taxable income because the tax deductions have been flowed through from the juniors to the investors.

There are no restrictions or differences in the transferability of the shares after the initial four-month hold period. The funds raised by the issuance of the common shares must be used for exploration expenditures on mineral properties in Canada.

The funds cannot be used for administration purposes or for development expenditures or on exploration outside of Canada. The Company renounces the expenditures, whereby the expenditures are flowed through to the investor. The shares are usually issued at a small premium to market, and often, no warrant is attached. If a warrant is attached, it is the Company's policy to issue a non-flow through warrant enabling the Company to use any funds derived from exercise of the warrants for administrative and other purposes.

Under FTS tax legislation, eligible exploration expenditures are 100% deductible from income from any source. These deductions shelter before-tax income. Tax credits apply directly to reduce taxes payable to the investor. A non-refundable tax credit reduces taxes to the extent of taxes payable. British Columbia and federal flow-through share based tax credits are non-refundable (the investor has to pay taxes in order to use the claim). However, unused credits can be carried back and applied against taxes paid in the previous three years or carried forward for up to ten years. Tax credits are considered assistance for income tax purposes and accordingly they reduce the Canadian Exploration Expense (CEE) pool. Both provincial and federal tax credits reduce the pool in the year after the one in which they were claimed. It decreases the adjusted cost base of the share to approximately 35% of the initial

issue price if the exploration is carried out in British Columbia. The rates vary from province to province, depending upon provincial tax credits available in the individual province of residence of the taxpayer.

The Company does not utilize FTS financing on a regular basis, and the financing described above is the second flow-through financing undertaken by the Company. The first was a financing of Cdn\$152,000 raised by the issuance of 160,000 common shares in fiscal 2003. Each province has a different flow-through share program, to encourage exploration in their respective provinces. In Canada, the Company is exploring only in British Columbia. British Columbia has three tax-based programs to encourage mineral exploration: Flow-Through Share, B.C. Mining Flow-Through Share Tax Credit and the B.C. Mining Exploration Tax Credit. In July 2001, the British Columbia government introduced a 20% non-refundable tax credit for qualifying grassroots exploration expenditures (funded by FTS to investors) made in British Columbia. This was in addition to, and is harmonized with the 15% Federal Mineral Exploration Tax Credit program relating to FTS and the existing 100% deduction of CEE. The province of British Columbia also has a Mining Exploration Tax Credit (METC). The METC is a 20% refundable tax credit applied to qualifying grassroots exploration, not funded by flow-through shares, on base and precious metals, coal and some industrial minerals. The credit is available to British Columbia tax residing individuals and companies who incurred these expenditures. The program applies to expenditures made between August 1, 1998, and July 1, 2006. The Company has applied for the tax credits, net of FTS expenditures, and will continue to do so until the program is cancelled, for all of its CEE in British Columbia.

Warrants

As at December 31, 2006, the following share purchase warrants were outstanding:

Number of Warrants	Exercise Price	Expiry Date
3,480,000	Cdn\$0.70	May 3, 2007
14,880,000	Cdn\$0.70	June 10, 2007
713,100	Cdn\$1.00	September 15, 2008
14,344,105	Cdn\$0.40	December 6, 2008
1,119,000	Cdn\$0.50	December 6, 2008
179,040	Cdn\$0.26	December 6, 2008
1,147,529	Cdn\$0.26	December 6, 2008
89,520*	Cdn\$0.50	December 6, 2008
1,147,529*	Cdn\$0.40	December 6, 2008
	Weighted Average Exercise Price: Cdn\$0.56	
37,099,823		

*Reserved for underlying warrants upon the exercise of broker and finder s warrants.

C.

Research and Development, Patents, Licenses, etc.

Prior to the licensing of the Ceramext® technology, Emgold was exclusively a resource-based corporation and accordingly did not have a program of intellectual property development or patenting or licensing issues.

Since the Company acquired the rights to the technology from Ceramext, LLC, which has a patent on the equipment and other patents pending on the process, Emgold has been developing a structure for tracking research and development expenditures. In 2003, \$24,054 was expended on due diligence prior to the approval of the transaction by regulatory authorities in early fiscal 2004. The recording of research and development costs in developing technologies is very similar to the recording of costs for mining and exploration activities. Research and development expenditures for the years ended December 31, 2007, 2006, 2005 and 2004, total \$629,148, \$1,590,754, \$1,769,659 and \$998,631, respectively.

The U.S. patent is in the name of Ross Guenther, (Ceramext, LLC), No. US 6,547,550 B1, dated April 15, 2003. The abstract states that the specification discloses a method and apparatus for forming and extruding ceramic materials. The apparatus utilizes a vacuum chamber mounted within a heating chamber or element; and the ceramic forming chamber is mounted within the vacuum chamber. A press is mounted within vacuum and forming chambers in order to apply pressure to the ceramic material during the heating step and subsequently during the ceramics extrusion step. The heating chamber applies heat to the vacuum chamber and forming chamber during the sintering and extrusion step. The forming chamber preferably remains in position within the vacuum chamber during the entire ceramic article manufacturing process.

The Company, on behalf of Ceramext, LLC, has three patent applications pending with the U.S. Patent Office (USPTO), the first being a process application, the second being a materials composition application, and the third being a new process and apparatus application. The Ceramext® process patent was filed with the USPTO in March 2003. The Ceramext® materials composition patent application was filed in September 2005. The new process and apparatus application was filed in October 2006. Two responses to the USPTO regarding claims in the Ceramext® process patent application have been completed. Certain international patents have also been filed or are in the process of being filed. The protection of the Company's intellectual property is a very high priority and additional patent applications are being prepared to protect the technology during development and commercialization.

D.

Trend information

Gold Prices

As a natural resource exploration company, Emgold's activities are cyclical as metals prices have traditionally been cyclical in nature. The recent trend for metals prices has been somewhat volatile for gold and silver. From a historical perspective Emgold has strategically focused its exploration activities on potential gold-based prospects. The mineral exploration industry had been through a very difficult period with low prices for both precious and base metals over the period from 1999 to 2004. During this period, the gold price increased to an average of \$409.72 and has increased annually since. The lack of interest in minerals over the earlier period led to low market capitalizations for many exploration companies and large corporations found it was easier to expand by purchasing companies or mines rather than exploring for them. This led to downsizing of large company exploration departments and many mining industry professionals left the industry. As a result of these trends, there are fewer good gold and silver projects in the exploration and development stages and a significant shortage of experienced engineers and geoscientists in the mining industry. With improving metal prices and increasing demand, especially from Asia, supply difficulties may occur in the future and there is a discernible need for good exploration projects based on sound geological work.

Gold prices, according to the London P.M. Fix, averaged \$409.72/oz in 2004, \$444.74/oz in 2005, \$603.46 in 2006, \$695.39 in 2007 and to April 30, 2008, averaged \$922.51/oz.

Market for Stone and Ceramics

The markets for stone and ceramic tile are very large and well established. According to a recent report in the American Ceramic Society Bulletin, more than 53 billion square feet of ceramic tile was produced worldwide on an annual basis. North America is a net importer of tile, with a large fraction of tile being consumed in the U.S. North America (Mexico, U.S. and Canada) consumes about 4.3 billion square feet, or 8% of world production, but produces only 4% (half of that consumed). The United States imports approximately 80% of the tile sold in its markets. This is the largest regional disparity in the world. Two-thirds of tile production in North America is in Mexico, whereas

production in the U.S. is only slightly over 1% of world production. Most of the tile imported into the U.S. comes from Mexico, Europe (Italy) and Asia. A recent article in Ceramic Industry magazine indicates U.S. tile sales for 2007 are estimated to be 3.14 billion square feet. Tile use is particularly strong in California, Florida, Texas, and Arizona.

The use of stone and ceramic building products in the USA has increased significantly over the last decade. For example, ceramic tile consumption has more than doubled in the past decade, as illustrated in Figure 1 below.

Figure 1: Consumption of Ceramic Tile in the U.S.A, 1980 to 2003

(1 sq. meter = 10.76 sq. feet)

[USA: Steady Growth in Tile Sales , *Tile International*, Jan/March, 2004, p. 78-79]

This trend was spurred by the construction boom and by the increased use of tile at the expense of floor coverings like carpet. Tile consumption in the United States continues to increase at approximately 6% to 8% per annum and future growth is expected to continue.

E.

Off-balance sheet arrangements

The Company does not have any off-balance sheet arrangements that have or are reasonably likely to have a current or future effect on the Company's financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources that is material to investors.

F.

Tabular disclosure of contractual obligations

The following table summarizes the Company's contractual obligations as at December 31, 2007:

Edgar Filing: EMGOLD MINING CORP - Form 20-F

	January 1, 2008, to December 31, 2008	1-2 years	2-3 years	3-4 years	4-5 years	5 th and subsequent years (2)	Total (to 5 years)
	\$	\$	\$	\$	\$	\$	\$
Capital lease	8,358	8,358	8,358	8,358	4,877	--	38,309
Operating lease obligations	263,136	263,136	65,784	--	--	--	592,056
Idaho-Maryland property lease (1)	300,000	--	--	--	--	--	300,000
Mineral property option payments (1)	20,000	25,000	25,000	25,000	25,000	25,000	145,000
Ceramext® royalties and payments	160,000	160,000	160,000	160,000	160,000	160,000	960,000
Purchase obligations (3)	5,194,127	---	--	--	--	--	5,194,127
Asset retirement obligations	--	--	--	--	--	--	--
	\$	\$	\$	\$	\$	\$	\$
	5,945,621	456,494	259,142	193,358	189,877	185,000	7,229,492

(1) Mineral property option payments are made at the option of the Company; however non-payment of mineral property leases may result in forfeiture of Emgold's rights to a particular property.

(2) The amount shown in th and subsequent years is a per-year figure.

(3) The Company holds an option to purchase the Idaho-Maryland mine. The option exercise price for 2002 was \$4,350,000, and increases by 3% each lease-year. The lease agreement and option to purchase, as amended, expires December 31, 2008.

Safe Harbor

Refer to Page 4 Cautionary Statement Regarding Forward-Looking Information.

ITEM 6.

DIRECTORS, SENIOR MANAGEMENT AND EMPLOYEES

A.

Directors and Senior Management

The following table lists the directors and senior management of the Company. The directors have served in their respective capacities since their election and/or appointment and will serve until the next annual general meeting or until a successor is duly elected, unless the office is vacated in accordance with the Articles/By-Laws of the Company. Messrs. Witte, Chang and Sinitsin resigned as officers of the Company effective July 25, 2007, but remain as officers of one of the Company's wholly-owned U.S. subsidiaries, Golden Bear Ceramics. Messrs. Berner and Yurichuk were appointed as Co-Chairmen and Co-Chief Executive Officers on July 25, 2007. Mr. Watkinson was the Company's VP, Operations from June 22, 2006 to July 25, 2007, and was subsequently appointed COO of the Company on July 25, 2007, and President of the Company on October 16, 2007. Shannon Ross, Chief Financial Officer and Corporate Secretary resigned from both roles subsequent to year-end and was replaced by Jonathan Fogg as Chief Financial Officer and Rodrigo Romo as Corporate Secretary.

Sargent Berner, Director, is a graduate of the University of British Columbia where he received his B.A. in 1963 and his LL.B. in 1966, and the London School of Economics, London, England where he received the degree of Master of Laws in 1967. From 1968 to 1976 he served as a full-time Assistant and Associate Professor of the Faculty of Law at the University of British Columbia and practised corporate, securities and natural resources law as an associate and/or partner in the Vancouver law firm of DuMoulin Black from 1976 to 2006. He provides consulting services to the Company through his company, Kent Avenue Consulting Ltd.

Kenneth R. Yurichuk is a Chartered Accountant and senior partner in the public accounting firm Bobot & Yurichuk

LLP, Chartered Accountants, Toronto. Mr. Yurichuk has been in public practice for over 30 years and has served as both director and officer of private and publicly-traded corporations involved in a wide range of businesses including mining, real estate development, investment and manufacturing. In addition, Mr. Yurichuk is a director of Mavrix Fund Management Inc. and served as a director and officer of the General Partners for several Contrarian Resource Fund Limited Partnerships and Mavrix Fund Limited Partnerships. Mr. Yurichuk holds a Bachelor of Commerce degree as well as the CA designation. He provides consulting services through his company 759924 Ontario Ltd., a private company.

Stephen J. Wilkinson is President and Chief Executive Officer of ValGold Resources Ltd. and Chairman of NovaDX Ventures Corp., a publicly traded junior merchant banking company specializing in raising capital and providing advisory services to early-stage junior resource companies. Mr. Wilkinson was President, Chief Executive Officer and Director of Northern Orion Explorations Ltd. during its successful restructuring over the period from 1999 to 2002 and from 1996 to 1999, he was the Vancouver based mining analyst for RBC Dominion Securities Inc., responsible for small capitalization and gold and base metal companies. Mr. Wilkinson holds an MBA from Clarkson University, Potsdam New York, a M.Sc. (Geology) from Carleton University and B.Sc. (Geology) from the University of Western Ontario.

William (Bill) J. Witte, P.Eng, Director, has been an officer and director of the Company since June 1999. From 1995 to joining the Company in 1999, Mr. Witte was self-employed. From 1992 to 1995 he was an engineering manager and project manager, with Fluor Daniel Wright Inc. Mr. Witte has more than 30 years of mining, engineering, business, and entrepreneurial experience. He holds degrees in both Civil (University of Nevada, Reno 1976) and Mechanical Engineering (University of Arizona 1978), and is a registered Professional Engineer in the Province of British Columbia. His mining and engineering experience covers not only all aspects of mine exploration, process research and development, and operations, but also engineering, construction and corporate management. Mr. Witte has been responsible for various aspects of the financing, construction, design and operation of over 200 mining and technology projects around the world. Mr. Witte spends 100% of his time devoted to Golden Bear Ceramics Company.

Robin A. W. Elliott is a Senior Partner at Manning Elliott LLP, Chartered Accountants and has been with the firm since 1975. Mr. Elliott has more than thirty years of accounting experience, primarily with small to medium-sized, owner-managed businesses and family holding and investment companies. Over the years, he has been on several committees related to the Institute of Chartered Accountants of British Columbia, including the Discipline Tribunal, Professional Liability Task Force, FCA Nominating, Regulatory Policy, Professional Development, and is a past President (2003) of the Institute. He is currently a member of a National Committee for professional liability insurance and was elected a Fellow in 1991. He is also a member of the Trust and Estate Practitioners Society, the Canadian Tax Foundation and the Institute of Corporate Directors (and is on the executive of the BC chapter). Mr. Elliott received his Chartered Accountant designation in 1969, and holds a Bachelor of Commerce degree from the University of British Columbia (1965).

David Watkinson, P. Eng. brings over 20 years of professional engineering experience in underground and open pit mine development, including mine permitting, engineering, feasibility, construction, and operations to Emgold. In addition, he has extensive experience in project management, having taken projects from grass roots start-up to successful operating status. Mr. Watkinson has been responsible for management of large capital projects and operations in Canada, the United States and the Philippines. He has held progressively senior positions with Placer Dome Inc., Kinross Gold Corporation, Thyssen Mining Construction and Vulcan Materials Company. Mr. Watkinson holds a B.Sc. in Applied Science, Mining Engineering, from Queen's University in Kingston, Ontario (1985) and is a Registered Professional Engineer in the Province of Ontario.

Ian I Chang, P. Eng. has been an officer the Company since November 2003. From 1999 to 2003, Mr Chang was Director, Sulfuric Acid Business Area, for NORAM Engineering and Constructors and had technical and fiscal responsibility for the business area. He is a registered professional engineer in the Province of B.C. and has over 20 years of technology management, project and engineering management, commissioning, and mechanical and piping design experience for mining/metallurgical projects and specialty chemical projects. From 1993 to 1999, he held senior project and engineering management positions with Fluor Daniel and Agra Simons (now AMEC PLC) in Canada and the United States, in the engineering and construction of large-scale mines such as Placer Dome's Zaldivar copper and Musselwhite gold mines, as well as Battle Mountain Gold's Korri Kollo gold project. He has significant experience with both hydrometallurgical (gold, copper, zinc, nickel, silver) and pyrometallurgical (gold, copper, zinc) processes. Mr. Chang holds B.A.Sc. and M.A.Sc. degrees from the University of British Columbia.

David Sinitsin P. Eng. brings more than 23 years of international engineering design, construction, commissioning and project management experience to Emgold. As a registered professional engineer, he has led teams to successful completion of large, international, multidisciplinary projects in the mining, chemical, electrochemical, petrochemical and pulp and paper industries. His experience includes the initiation and completion of large capital projects in Canada, Brazil, Peru, China, and the United States. Mr. Sinitsin has held progressively senior positions with international companies such as Shell Canada Inc., Aker-Kvaerner-Chemetics, Fluor Daniel Inc., AMEC PLC and NORAM Engineering and Constructors Ltd. He holds Bachelor and Master degrees in Mechanical Engineering from the University of British Columbia, with a specialization in the field of heat transfer and fluid flow.

Shannon M. Ross, CA, was the Chief Financial Officer and Corporate Secretary of the Company from 2000 to March, 2008. From June 2001 to March 2004 she was the Chief Financial Officer for Northern Orion Resources Inc. From 1991 to 1999, Ms Ross was with the Hunter Dickinson Group of companies, and held the position of Controller and other positions during that period. Shannon holds a Bachelor of Commerce degree from the University of Alberta, and is a registered Chartered Accountant (CA) in British Columbia. Ms Ross spent approximately 40% of her time on the affairs of the Company during 2007.

Jonathan L. Fogg, CA, has been the Chief Financial Officer of the Company since April 2008. From September 1999 to March 2008, Jonathan worked in the Audit and Assurance Group of PricewaterhouseCoopers LLP in both the Vancouver and Toronto offices. Jonathan holds a Bachelor of Administration degree from the University of Regina and is a Chartered Accountant (CA) in Saskatchewan.

Rodrigo Romo became the Corporate Secretary of Emgold in April 2008 and has been the in-house Securities and Corporate Paralegal since 2001 for LMC Management Services Ltd. ("LMC"), a private company, which provides management, administrative, legal, geological and other services to Emgold and a number of other publicly traded mineral exploration companies. Prior to joining LMC, Mr. Romo was a Securities and Corporate Paralegal with the law firm of Lang Michener LLP. Mr. Romo holds a two-year Diploma of Technology in Financial Management (Professional Accounting Option) from BCIT (1993) and a two-year Diploma of Paralegal Studies from Capilano College's Institute of Paralegal Studies (2000).

Technical Consultants and Employees

William S. Watters, P.E. Chief Mining Engineer, has 26 years of engineering and supervisory experience in underground mines and tunnels. His background includes supervision of underground miners working in industrial minerals, coal and gold mines as well as in tunnel construction management. His engineering involvement has been in the design and commissioning of continuous haulage systems used in underground mining, and he also has experience in the design of ventilation networks, dewatering systems, and electrical distribution for underground mines as well as mine planning and surveying. He has an extensive background in underground mining and tunnelling safety and is a certified safety representative in the state of California. His educational degrees and licenses include: B.S. Mining Engineering, University of Nevada Reno; State of Wyoming Registered Professional Engineer-Mining; State of California Registered Professional Engineer-Civil.

Robert R. Pease, R.G. Chief Geologist, has over 30 years of diversified experience in mineral development and engineering geology in the mining and construction industries. Mr. Pease has an extensive background in mother lode, Sierra Nevada, and basin-range geology applied to industrial minerals and gold, naturally occurring asbestos, surface and underground geologic mapping, drilling and sampling in difficult conditions, fracture-controlled ground water, and engineering geology. Mr. Pease has also conducted market research analyses of industrial minerals. He has developed reclamation plans for mining projects, and has conducted annual inspections of mines in Nevada county as the consultant for that lead agency under smara. He has written documents requiring approval by government agencies, such as application documents for mining projects and hazardous materials plans. Mr. Pease is a Registered Geologist in California and holds B.S. and M.S. degrees in Geology from University of Nevada.

Carl Frahme, PhD, Director of Product Development and Marketing, has nearly four decades of varied experience in ceramic technology and the ceramic industry. He has conducted and managed ceramic research and development projects. He spent two decades in the refractory ceramic fiber insulation industry, supplying materials to the ceramic, metals processing, petroleum refining and processing industries, the OEM market, and other heat processing applications. His responsibilities in this area have included product development, manufacturing, marketing and sales, business management, and construction project management. Since 1987 he has had his own ceramic and materials consulting business, Frahme Consulting Services, Inc. He is currently consulting with the Company to commercialize the Ceramext process for converting mine development rock into high value ceramic products. Dr. Frahme holds a BS in Metallurgical Engineering from Case Institute of Technology (now Case Western Reserve University) and a Ph.D. in Ceramic Science and Engineering from Rutgers - State University.

Patricia Nelson, Director of Environmental Permitting manages the permitting and environmental compliance programs for the company. She has over 30 years of experience managing and directing multidisciplinary environmental projects for government, industry, and utility organizations that involved regulatory compliance, natural resource development and hazardous waste management. In addition, she has experience directing field work and construction projects; developing and implementing public participation programs; and conducting project

specific environmental negotiations among government and industry stakeholders. She has a Bachelor of Science from the University of California at Berkeley, a Masters Degree in Business Administration from the University of San Francisco, and is a Certified Mediator from John F. Kennedy University. Ms. Nelson is also a Registered Environmental Assessor (REA) in California and has extensive hazmat training.

Jim Wood, MSc, P.G., Manager, Material Sciences is responsible for all test work and SPC on feed materials and final products. He has 24 years of experience in the field of geological materials research. He has performed

microscopic studies of rock and mineral materials using various analytical techniques including X-ray Diffraction mineral analysis, Polarized Light Microscopy and use of the Scanning Electron Microscope/Microprobe. Jim has worked for Unocal at their Science and Technology Research Center as a mineralogist. He has also been a forensics consultant on construction materials failure for a number of leading geotechnical consulting firms. He holds a B.S. degree in Earth Science from California State University, Long Beach and a M.S degree in Geology from California State University at Los Angeles. He is a registered Professional Geologist in California.

Bob Vilwock, PhD, Senior Process Engineer is responsible for GBC's intellectual property and performs process R&D. He has 17 years of engineering and R&D experience primarily in materials science of recycling processes. He has worked in thermoplastic molding and extrusion, plastic recycling, wood products, electrochemical engineering, chlorine, polyurethane foam, and high-temperature ceramic manufacture. Bob has held senior technical positions at Dow Chemical and Mobius Technologies. He holds four U.S. patents, and he is very experienced in intellectual property matters. Bob holds a B.S.E. in Polymer Science and Engineering from Case Western Reserve University, and a Ph.D. in Chemical Engineering from the University of California at Berkeley.

B.

Compensation

Stock option plan

In order to provide incentive to directors, officers, employees, management and others who provide services to Emgold to act in the best interests of the Company, Emgold initially adopted a Stock Option Plan (the "Old Plan"), effective June 19, 1997. The purpose of the Old Plan and a New Stock Option Plan (the "New Plan") approved at the Company's Annual General Meeting of shareholders held on June 8, 2005, is to allow Emgold to grant options to directors, officers, employees and service providers, as additional compensation, and as an opportunity to participate in the profitability of Emgold. The granting of such options is intended to align the interests of such persons with that of Emgold. Options under the Old Plan are exercisable over periods of up to ten years as determined by the board of directors of Emgold and are required to have an exercise price no less than the market price as defined in the Plan prevailing on the day that the option is granted. Pursuant to the Plan, the board of directors may from time to time authorize the issue of options to directors, officers and employees of and consultants to Emgold and its subsidiaries or employees of companies providing management services to the Emgold or its subsidiaries. Pursuant to the New Plan, the directors may from time to time authorize the issuance of options to directors, officers, employees and consultants of the Company and its subsidiaries to a maximum of 10% of the issued and outstanding common shares at the time of the grant, with a maximum of 5% of the Company's issued and outstanding shares being reserved to any one person on a yearly basis.

At December 31, 2007, and at April 30, 2008, a total of 15,648,964 and 15,710,970 shares respectively of Emgold were reserved for share incentive options to be granted at the discretion of Emgold's board of directors to eligible optionees (the "Optionees"), of which 13,698,000 were outstanding under the plan at December 31, 2007 and 13,623,000 were outstanding under the plan at April 30, 2008.

The Plan provides that if a change of control, as defined therein, occurs, all shares subject to options shall immediately become vested and may thereupon be exercised in whole or in part by the option holder.

For the purposes of the Plan, an "insider" is a director or senior officer of Emgold, a director or senior officer of a company that is itself an insider or subsidiary of Emgold, or a person whose control, or direct or indirect beneficial

ownership, or a combination thereof, over securities of Emgold extends to securities carrying more than 10% of the voting rights attached to all Emgold's outstanding voting securities. The number of shares under option from time to time and the exercise prices of such options, and any amendments thereto, will be and have been determined by the Directors in accordance with the policies of the TSX Venture Exchange.

Ian Chang	500,000/0	10,000/0
Shannon M. Ross	700,000/0	10,000/0

Directors

Emgold has no arrangements, standard or otherwise, except for stock options granted, pursuant to which Directors are compensated by Emgold or its subsidiaries for their services in their capacity as Directors, or for committee participation, involvement in special assignments or for services as consultant or expert during the most recently

completed financial year. This is currently under review by the Compensation and Corporate Governance committee.

Directors are entitled to reimbursement for reasonable travel and other out-of-pocket expenses incurred in connection with attendance at meetings of the Board of Directors. The Board of Directors may award special remuneration to any director undertaking any special services on behalf of the Company other than services ordinarily required of a director. This is subject to recommendation by the Compensation and Corporate Governance committee. As indicated below, the Co-Chief Executive Officers who also serve as directors of the Company received compensation for their services through employment contracts. In addition, the independent directors, Robin A.W. Elliott and Stephen J. Wilkinson each received Cdn \$10,000 as quarterly compensation commencing on October 1, 2007.

Employee compensation

Total compensation paid by the Company directly and/or indirectly to all directors and executive officers during the fiscal year ended December 31, 2007, was Cdn\$930,308 and \$185,000. Consulting fees of Cdn\$57,500 were paid to Kent Avenue Consulting Ltd., for the services of Sargent H. Berner and consulting fees of Cdn\$49,000 were paid to 759924 Ontario Ltd., a private company controlled by Kenneth Yurichuk. William J. Witte, a director of Emgold, David Watkinson, President and Chief Operating Officer, Shannon Ross, Emgold's Secretary and Chief Financial Officer until March 31, 2008, and Ian Chang, Vice President, Project Development, David Sinitsin, Vice President, Engineering & Procurement are each a Named Executive Officer of Emgold for the purposes of the following disclosure. The compensation paid to each of the Named Executive Officers during Emgold's three most recently completed financial years is as set out below, in Canadian dollars:

Name and Principal Position (Note 2)	Year	Salary (Note 1)	Annual Compensation		Long Term Compensation			All other Compensation (\$)
			Bonus Other Annual	Other Annual Compensation (\$)	Awards Securities Under Option/ SAR's granted (#) (Notes 3 and 4)	Restricted Shares or Restricted Share Units (\$)	Payouts LTIP Payouts (\$)

Note 1: During the years ended December 31, 2007, 2006 and 2005, management, administrative, geological and other services were provided on a full cost recovery basis by LMC Management Services Ltd. (LMC). The Company reimburses LMC for the salaries paid to the Canadian employees and officers on a full cost recovery basis.

Note 2: Messrs. Witte, Chang and Sinitsin resigned as officers of the Company effective July 25, 2007, but remain as officers of one of the Company's wholly-owned U.S. subsidiaries. Messrs. Berner and Yurichuk were appointed as Co-Chairmen and Co-CEOs on July 25, 2007. Mr. Watkinson was the Company's VP, Operations from June 22, 2006 to July 25, 2007, and was subsequently appointed COO of the Company on July 25, 2007, and President of the Company on October 16, 2007. Shannon Ross, Chief Financial Officer and Corporate Secretary resigned from both roles subsequent to year-end and was replaced by Jonathan Fogg as Chief Financial Officer and Rodrigo Romo as Corporate Secretary.

Note 3: The 2007 incentive stock options were granted December 11, 2007, and are exercisable at \$0.15 per Share until December 11, 2012.

Note 4: The 2006 incentive stock options were granted November 22, 2006, and are exercisable at \$0.29 per Share until November 22, 2011.

Employment Contracts:

Emgold and its subsidiaries have employment contracts with the Co-Chief Executive Officers, Sargent H. Berner and Kenneth Yurichuk. Mr Berner and Yurichuk are also Co-Chairs of the Company. Compensation of Cdn \$7,000 was paid monthly to Kent Avenue Consulting Ltd., a private company controlled by Sargent H. Berner effective October 1, 2007 and to 759924 Ontario Ltd., a private company controlled by Kenneth Yurichuk effective August 1, 2007. Prior to the commencement of the employment contracts, the Company paid Kent Avenue Consulting Ltd. Cdn \$36,500 in consulting fees for the period from January 1, 2007 to September 30, 2007. In the event of termination (including termination upon a change in control), other than for cause, each of the Named Executive Officers may be entitled to receive a payment.

Emgold and its subsidiaries have no other compensatory plan or arrangement in respect of compensation received or that may be received by the Named Executive Officers in Emgold's most recently completed or current financial year to compensate such executive officers in the event of the termination of employment (resignation, retirement, change of control) or in the event of a change in responsibilities following a change in control.

C.

Board practices

All directors were elected at the June 20, 2007, annual general meeting and have a term of office expiring at the next annual general meeting of Emgold held on June 20, 2008. All officers have a term of office lasting until their removal or replacement by the Board of Directors. Each of the Directors was reappointed at the June 20, 2008 Annual General Meeting.

An unrelated director under the TSX governance guidelines is a director who is independent from management and is free from any interest and any business or other relationship which could materially interfere with his or her ability to act in the best interest of the Company other than interests arising from shareholding. Where a company has a significant shareholder, in addition to a majority of unrelated directors, the Board should include a number of directors who do not have interest or relationships with either the Company or the significant shareholder. Mr. Stephen Wilkinson and Mr. Robin A.W. Elliott were appointed to the Board as independent directors. Mr. John K. Burns, formerly an independent director, resigned for personal reasons during 2007. As such, the number of directors is five. Mr. William Witte is related due to holding an executive position with the Company until August 2008 and due to holding an executive position in the Company's subsidiary, Golden Bear Ceramics.

No director and/or executive officer has been the subject of any order, judgment, or decree of any governmental agency or administrator or of any court or competent jurisdiction, revoking or suspending for cause any license, permit or other authority of such person or of any corporation of which he is a director and/or executive officer, to engage in the securities business or in the sale of a particular security or temporarily or permanently restraining or enjoining any such person or any corporation of which he is an officer or director from engaging in or continuing any conduct, practice or employment in connection with the purchase or sale of securities, or convicting such person of any felony or misdemeanour involving a security or any aspect of the securities business or of theft or of any felony.

There are no director's services contracts with the Company providing for benefits upon termination of employment. Emgold and its subsidiaries have no compensatory plan or arrangement in respect of compensation received or that may be received by the directors of the Company in its most recently completed or current financial year to compensate such directors in the event of termination as director (resignation, retirement, change of control) or in

Edgar Filing: EMGOLD MINING CORP - Form 20-F

the event of a change in control. There are no arrangements or understandings with any two or more directors or executive officers pursuant to which he was selected as a director or executive officer. Other than as disclosed in related party transactions, and salaries for executive officers, there is no compensation paid to outside directors other than stock-based compensation.

The following information is provided with respect to the Company's directors, and members of its administrative, supervisory or management body and includes the date of expiration of the current term of office and the period during which the person has served in that office.

Name	Position(s) with Company	Term of Office/Period of Service
William J. Witte	Director	June 16, 1999 (Executive Vice President and Director). July 19, 2002 to July 25, 2007 (President and Chief Executive Officer), July 25, 2007 to present, Director
Sargent H. Berner	Co-Chairman and Co-Chief Executive Officer	May 13, 1991 – August 1, 2007 (Director), July 25, 2007 – Present, Co-Chairman and Co-Chief Executive Officer
John King Burns	Non-executive Chairman until July 27, 2007.	June 8, 2005, as Chairman, June 18, 2003 as Director and June 16, 2004 as Lead Director until July 27, 2007
Robin A.W. Elliott	Director	Director since June 22, 2006
Kenneth Yurichuk	Co-Chairman and Co-Chief Executive Officer	Director since June 22, 2006, Co-Chairman and Co-Chief Executive Officer from July 25, 2007 – Present
David Watkinson	Director and President and Chief Executive Officer effective August 2007.	June 5, 2006 to July 25, 2007 (Vice-President Operations), July 25, 2007 to present, Chief Operating Officer and October 14, 2007 to present, President and Chief Operating Officer
David Sinitsin	Vice President, Engineering and Procurement, Golden Bear	May 1, 2006 to July 25, 2007, Vice-President, Engineering and Procurement Emgold and Golden Bear, July 25, 2007 to present Vice-President, Engineering and Procurement, Golden Bear Ceramics
Ian Chang	Vice President Project Development, Golden Bear	November 5, 2003 to July 25, 2007 Vice President Project Development, Emgold and Golden Bear. July 25, 2007 to present, Vice President Project

Development, Golden Bear Ceramics.

Shannon M. Ross

Chief Financial Officer and Corporate
Secretary

June 20, 2000, and January 31, 2000,
respectively to March 31, 2008.

Audit Committee

Robin A. W. Elliott, Kenneth Yurichuk and Stephen J. Wilkinson are currently the members of Emgold's audit committee. The audit committee is appointed annually by the directors of Emgold at the first meeting of the board held after Emgold's annual general meeting. The primary function of the audit committee is to review the financial statements of Emgold before they are submitted to the board for approval. The Committee is also available to assist the board if required with matters relating to the appointment of Emgold's auditor and the overall scope and results of the audit, internal financial controls, and financial information for publication for various purposes.

Corporate Governance and Executive Compensation Committee

Members of the Corporate Governance Committee are Messrs. Wilkinson, Yurichuk and Elliott. The committee was formed for making recommendations to the board with respect to developments in the area of corporate governance, the practices of the board, and appropriate candidates for nomination to the board and for evaluating the performance of the board.

D.**Employees**

At December 31, 2007, Emgold had six employees. Emgold Mining Corporation, the parent company, employs none of these employees. The employees are employed by Emgold's subsidiary, Idaho-Maryland Mining Corporation in California. Emgold and its subsidiaries also contract staff on an as-needed basis, but usually not more than one or two individuals on a periodic basis. Emgold Mining Corporation administrative functions are primarily provided through LMC Management Services Ltd. (LMC) (see Item 7).

** All of Mr. Elliott's common shares and share purchase warrants are held indirectly in the name of Gower Point Investments Ltd., a private holding company controlled by Robin A. W. Elliott and his spouse

ITEM 7.

MAJOR SHAREHOLDERS AND RELATED PARTY TRANSACTIONS

A.

Major Shareholders

The Company is a publicly owned corporation, incorporated in the province of British Columbia, the shares of which are owned by residents of the United States, residents of Canada and other foreign residents. To the extent known by the directors and executive officers of the Company, the Company is not directly or indirectly owned or controlled by another corporation. As of December 31, 2007, and April 30, 2008, there are two holders of 5% or more of the common shares of Emgold.

The first holder with greater than 5% of the Company's common shares at December 31, 2007, is RAB Special Situations, holding 31,120,540 common shares or 19.89% of the issued and outstanding common shares. At December 31, 2006 they held 6,000,000 common shares or 7.16% of the issued and outstanding common shares. They did not hold a significant number of common shares in prior years.

The second holder with greater than 5% of the Company's common shares at December 31, 2007, is Galaxy Fund, Inc., holding 12,400,000 common shares or 7.92% of the issued and outstanding common shares. At December 31, 2006 and 2005, they held 12,400,000 common shares or 14.80% and 18.92%, respectively of the issued and outstanding common shares. They did not hold any common shares of the Company in prior years.

All shareholders, including major and/or controlling shareholders have the same voting rights with respect to the issued common shares.

Emgold's securities are recorded on the books of its transfer agent in registered form, however, the majority of such shares are registered in the name of intermediaries such as brokerage houses and clearing houses on behalf of their respective brokerage clients, and Emgold does not have knowledge of or access to information about the beneficial owners thereof. To the best of its knowledge, Emgold is not directly or indirectly owned or controlled by a corporation or foreign government. As of December 31, 2007, Emgold had authorized an unlimited number of common shares without par value of which 156,489,642 were issued and outstanding, and an unlimited number of preference shares of which 3,948,428 Series A First Preference Shares were issued and outstanding.

As of April 30, 2008, there were 598 registered shareholders of record holding a total of 157,109,642 common shares of Emgold. To the best of Emgold's knowledge there were 261 registered shareholders of record with registered addresses in Canada, 327 shareholders of record with registered addresses in the United States and 10 shareholders of record with registered addresses in other countries holding approximately 123,370,741 (78.5%), 18,725,746 (11.9%) and 15,013,155 (9.6%) of the outstanding common shares, respectively. Shares registered in intermediaries are assumed to be held by residents of the same country in which the clearing-house was located.

B.

Related Party Transactions

No director or senior officer, and no associate or affiliate of the foregoing persons, and no insider has or has had any material interest, direct or indirect, in any transactions, or in any other proposed transaction between January 1, 2007, and the date hereof, except as noted below.

Related party balances are non-interest bearing and are due on demand, with no fixed terms of repayment, except for the Class A First Preference Shares held by Lang Mining Corporation and Frank A. Lang.

Frank A. Lang and Lang Mining Corporation

Class A Convertible Preference Shares

During fiscal 2002, the Company entered into several private placements, completed a debt settlement, and was able to pay off the majority of the creditors of the Company. At December 31, 2002, Mr. Frank A. Lang and Lang Mining Corporation (collectively Lang) remained as the major creditors of the Company, the debt arising from financial support provided to the Company over a prolonged period. The Company entered into an agreement with Lang to issue 3,948,428 Series A First Preference shares in full satisfaction of an aggregate Cdn\$789,686 of indebtedness

owing to Lang.

The Series A First Preference Shares rank in priority to the Company's common shares and are entitled to fixed cumulative preferential dividends at a rate of 7% per annum. The shares are redeemable by the Company at any time on 30 days written notice at a redemption price of Cdn\$0.20 per share, but are redeemable by the holder only out of funds available that are not, in the Company's opinion, otherwise required for the development of the Company's mineral property interests or to maintain a minimum of Cdn\$2 million in working capital.

The Series A First Preference Shares are convertible into common shares at any time at a ratio of one common share for every four Series A First Preference Shares. This ratio represents an effective conversion price of Cdn\$0.80 per common share. The Preference Shares also have attached a gold redemption feature by which holders may elect at the time of any proposed redemption to receive gold in specie valued at \$300 per ounce in lieu of cash, provided the Company has on hand at the time gold in specie having an aggregate value of not less than the redemption amount.

The value of the convertible preference shares was split into a debt component and an equity component. This resulted in \$90,902 being included in equity. The balance of \$750,624 is the value included in debt as preference shares. At December 31, 2007, \$284,146 (December 31, 2006, \$194,148) has been accrued in accounts payable in relation to the 7% fixed cumulative preferential dividends.

LMC Management Services Ltd. Administration and Services Agreement

Management, administrative, geological and other services are provided by LMC Management Services Ltd. (LMC), a private company held jointly by the Company and other public companies, providing services on a full cost recovery basis to the various public entities currently sharing office space with the Company. Currently the Company has a 25% interest in LMC. Three months of estimated working capital is required to be on deposit with LMC under the terms of the services agreement. There is no difference between the cost of \$1 and equity value, as LMC does not retain any profits in connection with the services provided by it. All transactions are conducted in an arms-length manner.

Other Related Party Transactions in the Three Years Ended December 31, 2007, 2006 and 2005

During the year ended December 31, 2004, the Company signed an exclusive worldwide license agreement with Ceramext, LLC to develop and use the Ceramext® technology. The technology was licensed from Ceramext, LLC, a private company controlled by Ross Guenther, a former director of the Company. Under the terms of the agreement, the Company has paid \$100,000 and issued 200,000 common shares to Ceramext, LLC. The worldwide rights will remain in force based upon maintaining the following advance minimum royalty payments: \$5,000 per quarter in 2005; \$10,000 per quarter in 2006; \$20,000 per quarter in 2007; and \$40,000 per quarter thereafter. All payments have been made to date. Negotiations for the rights to the Ceramext® technology with Mr. Guenther were conducted in an arms-length manner. Mr. Guenther abstained from voting on the transaction as he was a director of the Company at the time.

During 2007, consulting fees of \$58,566 (2006 - \$33,353), (2005 - \$6,393) were paid indirectly to Kent Avenue Consulting Ltd., a private company controlled by a director, Sargent H. Berner.

During 2007, consulting fees of \$49,430 (2006 - \$Nil) (2005 - \$Nil) were paid directly to 759924 Ontario Ltd., a private company controlled by a director, Kenneth Yurichuk.

ITEM 8.

FINANCIAL INFORMATION

A.

Consolidated Statements and Other Financial Information

See Item 17 Financial Statements . The consolidated financial statements as required are attached as an exhibit and are found immediately following the text of this Annual Report. The audit report of PricewaterhouseCoopers LLP, independent Chartered Accountants, is included immediately preceding the consolidated financial statements.

Legal Proceedings

Emgold is not involved in any litigation or legal proceedings and to Emgold's knowledge no material legal proceedings involving Emgold or any of its subsidiaries are presently anticipated to be initiated.

Dividend Policy

Emgold has not paid any dividends on its outstanding common shares since its incorporation and does not anticipate that it will do so in the foreseeable future. All funds of Emgold are being retained for exploration and development of its Projects.

B.

Significant Changes

There are no significant changes of financial conditions since the most recent audited financial statements included within this Annual Report. Interim financial statements are incorporated into the financial statements included herein.

ITEM 9.**THE OFFER AND LISTING****A.****Offer and listing details**Trading Markets

The table below lists the high and low prices for common shares of the Company for the past five years and for the current fiscal year to April 30, 2008.

B.

Memorandum and Articles of Association

Emgold's corporate constituting documents comprising Articles of Association and Memorandum are registered with the British Columbia Registrar of Companies under Corporation No. 361869. The Company was continued under the Business Corporations Act in British Columbia in June 2005. A copy of the Notice of Article and Articles are filed as an exhibit to this Annual Report on Form 20-F.

1.

Objects and Purposes

Emgold's Articles do not specify objects or purposes. Under British Columbia law, a British Columbia corporation has all the legal powers of a natural person. British Columbia corporations may not undertake certain limited business activities such as operating as a trust company or railroad without alterations to its form of articles and specific government consent.

2.

Directors Powers and Limitations

Emgold's articles do not specify a maximum number of directors (the minimum under British Columbia law for a public company is three). Shareholders at the annual shareholders meeting determine the number of directors annually and all directors are elected at that time. There are no staggered directorships. Under the British Columbia Business Corporations Act (BCA) directors are obligated to abstain from voting on matters in which they may be financially interested after fully disclosing such interest. Directors' compensation is not a matter on which they must abstain. Directors must be of the age of majority (18), and meet eligibility criteria including not being mentally

infirm, not having any undischarged bankruptcies and having no fraud related convictions in the previous five years. There is no mandatory retirement age either under Emgold's Articles or under the BCA.

Directors' borrowing powers are not generally restricted where the borrowing is in Emgold's best interests, but the directors may not authorize Emgold to provide financial assistance for any reason where Emgold is insolvent or the

providing of the guarantee would render it insolvent. Directors need not own any shares of Emgold in order to qualify as directors.

The Articles specify the number of directors shall be the number of directors fixed by shareholders annually, or the number that are actually elected at a general shareholders meeting. Shareholders at the annual shareholders meeting determine the number of directors annually and all directors are elected at that time. Under the Articles the directors are entitled between successive annual general meetings to appoint one or more additional directors but not more than one-third of the number of directors fixed at a shareholders meeting or actually elected at the preceding annual shareholders meeting. Directors automatically retire at the commencement of each annual meeting but may be re-elected thereat.

Under the Articles, a director who is in any way directly or indirectly interested in a proposed contract or transaction, or who holds any office or possesses any property whereby directly or indirectly a duty might be created which would conflict with his duty or interest as a director, shall declare the nature and extent of such interest in such contract or transaction. A director shall not vote in respect of any such contract or transaction and if he should vote, his vote shall not be counted, but he may be counted in the quorum present at the meeting. Similarly, under the BCA directors are obligated to abstain from voting on matters in which they may be financially interested after fully disclosing such interest.

3.

Descriptions of rights, preferences and restrictions attaching to each class of shares

Common Shares

Emgold has authorized an unlimited number of common shares without par value. All common shares rank pari passu for the payment of dividends and distributions in the event of wind-up.

Some of the significant provisions under British Columbia law and Emgold's Articles relating to the common shares may be summarized as follows:

Capital Increases and Other Changes

Authorized capital increases as well as other changes to the constituting documents require the approval of the majority of votes of shareholders at a duly convened meeting.

Certain changes such as amalgamations, re-domiciling, and creation of new classes of shares may also give rise to dissent rights (the right to be paid the fair value for their shares in cash if the matter is proceeded with).

Shares Fully Paid

All Emgold shares must, by applicable law, be issued as fully paid for cash, property or services. They are, therefore, non-assessable and not subject to further calls for payment.

Pre-emptive Rights

There are no pre-emptive rights applicable to Emgold which provide a right to any person to participate in offerings of Emgold's securities

Liquidation

All common shares of Emgold participate rateably in any available assets in the event of a winding up or other liquidation.

No Limitation on Foreign Ownership

There are no limitations under Emgold's Articles or in the BCA on the right of persons who are not residents of Canada or foreign shareholders to hold or vote common shares. (See also Exchange Controls)

Dividends

Dividends may be declared by the Board out of available assets and are paid rateably to holders of common shares. No dividend may be paid if Emgold is, or would thereby become, insolvent.

Voting Rights

Each Emgold common share is entitled to one vote on matters to which common shares ordinarily vote including the election of directors, appointment of auditors and approval of corporate changes. There are no cumulative voting rights applicable to Emgold. At an annual meeting of shareholders, subject to the BCA, general meeting resolutions are decided by a show of hands, or upon request, by a poll. A simple majority is required to pass an ordinary resolution.

Shareholder Meetings

Shareholders' meetings are governed by the Articles of Emgold but many important shareholder protections are also contained in the Securities Act (British Columbia) and the BCA. The Articles provide that Emgold will hold an annual shareholders' meeting, will provide at least 21 days' notice and will provide for certain procedural matters and rules of order with respect to the conduct of the meeting. The Securities Act (British Columbia) and the BCA superimpose requirements that generally provide that shareholders' meetings require not less than a 60 day notice period from initial public notice and that Emgold makes a thorough advanced search of intermediary and brokerage registered shareholdings to facilitate communication with beneficial shareholders so that meeting proxy and information materials can be sent via the brokerages to unregistered but beneficial shareholders. The form and content of information circulars and proxies and like matters are governed by the Securities Act (British Columbia) and the BCA. This legislation specifies the disclosure requirements for the proxy materials and various corporate actions, background information on the nominees for election for director, executive compensation paid in the previous year and full details of any unusual matters or related party transactions. Emgold must hold an annual shareholders' meeting open to all shareholders for personal attendance or by proxy at each shareholder's determination. The meeting must be held within 15 months of the previous annual shareholders' meeting. A quorum for a shareholders' meeting is two members or proxy holders present.

Change in Control

Emgold has not implemented any shareholders' rights or other poison pill protection against possible take-overs. Emgold does not have any agreements, which are triggered by a take-over or other change of control. There are no provisions in its articles triggered by or affected by a change in outstanding shares which gives rise to a change in control. There are no provisions in Emgold's material agreements giving special rights to any person on a change of control.

Insider Share Ownership Reporting

The articles of Emgold do not require disclosure of share ownership. Share ownership of director nominees must be reported annually in proxy materials sent to Emgold's shareholders. There are no requirements under British Columbia corporate law to report ownership of shares of Emgold but the Securities Act (British Columbia) requires disclosure of trading by insiders (generally officers, directors and holders of 10% of voting shares) within 10 days of the trade. Controlling shareholders (generally those in excess of 20% of outstanding shares) must provide seven days advance notice of share sales.

Securities Act (British Columbia)

This statute applies to Emgold and governs matters typically pertaining to public securities such as continuous quarterly financial reporting, immediate disclosure of material changes, insider trade reporting, take-over protections to ensure fair and equal treatment of all shareholders, exemption and resale rules pertaining to non-prospectus securities issuances as well as civil liability for certain misrepresentations, disciplinary, appeal and discretionary ruling matters. All Emgold shareholders regardless of residence have equal rights under this legislation.

Future Capital Calls

The directors of the Company do not have any liability for future capital calls.

Preference Shares

Emgold has authorized an unlimited number of preference shares without par value of which 3,948,428 Series A First Preference shares are outstanding as of December 31, 2006. (See Item 7 Series A First Preference Shares).

C.

Material contracts

The following is a summary of each material contract, other than contracts entered into in the ordinary course of business, to which Emgold or any member of the Emgold group is a party, for the two years preceding the date of this document.

1.

The Company has a lease and option to purchase agreement for a 44,750 square foot building located in Grass Valley, California. Minimum lease payments are currently \$21,928 per month and increase by the Cost of Living Adjustment for all urban consumers in the San Francisco-Oakland area, annually up to April 1, 2010. The company has an option to purchase, and the purchase price, if exercised in fiscal 2008, would be \$3.06 million, increasing by \$50,000 annually to the end of fiscal 2009, with an additional increase in 2010.

2.

A five-year lease (as amended) initially, had a term commencing on June 1, 2002, and ending on May 31, 2007, with the owners of the Idaho-Maryland Mine. The owners granted to the Company the exclusive right and option to purchase all of the leased property. The property is subject to a 3% net smelter royalty from production if the property is still being leased. Any royalty payments made prior to exercising the purchase option may be deducted from the purchase price. Lease payments of \$25,500 were payable quarterly on February, May, August and November 1st, commencing May 1, 2004, and continuing until February 1, 2007, as amended. In February 2007, for a one-time payment of \$75,000, the Company negotiated an extension to the initial amended lease, whereby the term of the exercise date was extended from May 31, 2007 to December 31, 2008. The Company agreed to a quarterly lease payment of \$75,000 beginning on May 1, 2007, and continuing for the term of the revised lease. All other conditions of the original agreement, including the option purchase price and net smelter royalty remain unchanged.

3.

The Company signed an agreement with Ceramext, LLC, a private company controlled by Ross Guenther, to develop and use the Ceramext® process. Under the terms of the agreement, the Company has obtained the worldwide rights, subject to a monthly royalty of 3% of the gross sales revenue derived from the sales of physical products produced.

Pursuant to the terms of the agreement, Emgold paid \$100,000 and issued 200,000 common shares to Ceramext, LLC. The worldwide rights will remain in force based upon maintaining the following minimum royalty payments: \$5,000 per quarter in 2005; \$10,000 per quarter in 2006; \$20,000 per quarter in 2007; and \$40,000 per quarter thereafter. All payments required under the agreement have been made to date.

4.

The Company entered into a joint venture with a private, non-related company to acquire approximately 45.4 acres adjacent to other properties under option by the Company in Grass Valley, California. The Company's share of the purchase price was \$542,500 plus 30% of the closing costs. The joint venture was terminated and the Company's title to its share of the property was transferred in to the Company's name during the year ended December 31, 2005.

D.

Exchange controls

Emgold is a corporation incorporated pursuant to the laws of the Province of British Columbia, Canada. The Company is not aware of any Canadian federal or provincial laws, decrees or regulations that restrict the export or import of capital, including foreign exchange controls, or that affect the remittance of dividends, interest or other payments to a non-resident holder of Common Shares, other than withholding tax requirements. Any such remittances to United States residents are generally subject to withholding tax, however no such remittances are likely in the foreseeable future. See **Taxation**, below.

There is no limitation imposed by the laws of Canada or by the charter or other constituent documents of Emgold on the right of a non-resident to hold or vote the Common Shares, other than as provided in the Investment Canada Act (the **Investment Act**). The following discussion summarizes the material features of the Investment Act for a non-resident who proposes to acquire the Common Shares. It is general only, it is not a substitute for independent advice from an investor's own advisor, and it does not anticipate statutory or regulatory amendments. Emgold does not believe the Investment Act will have any effect on it or on its non-Canadian shareholders due to a number of factors including the nature of its operations and Emgold's relatively small capitalization.

The Investment Act generally prohibits implementation of a reviewable investment by an individual, government or agency thereof, corporation, partnership, trust or joint venture (each an entity) that is not a Canadian as defined in the Investment Act (a non-Canadian), unless after review the Director of Investments appointed by the minister responsible for the Investment Act is satisfied that the investment is likely to be of net benefit to Canada. The size and nature of a proposed transaction may give rise to an obligation to notify the Director to seek an advance ruling. An investment in Emgold's Common Shares by a non-Canadian other than a WTO Investor (as that term is defined in the Investment Act and which term includes entities which are nationals of or are controlled by nationals of member states of the World Trade Organization) when Emgold was not controlled by a WTO Investor, would be reviewable under the Investment Act if it was an investment to acquire control of Emgold and the value of the assets of Emgold, as determined in accordance with the regulations promulgated under the Investment Act, was over a certain figure, or if an order for review was made by the federal cabinet on the grounds that the investment related to Canada's cultural heritage or national identity, regardless of the value of the assets of Emgold. An investment in the Common Shares by a WTO Investor, or by a non-Canadian when Emgold was controlled by a WTO Investor, would be reviewable under the Investment Act if it was an investment to acquire control of Emgold and the value of the assets of Emgold, as determined in accordance with the regulations promulgated under the Investment Act, was not less than a specified amount, which for 2008 is Cdn\$295 million. A non-Canadian would acquire control of Emgold for the purposes of the Investment Act if the non-Canadian acquired a majority of the Common Shares. The acquisition of less than a majority but one-third or more of the Common Shares would be presumed to be an acquisition of control of Emgold unless it could be established that, on the acquisition, Emgold was not controlled in fact by the acquirer through the ownership of the Common Shares.

The foregoing assumes Emgold will not engage in the production of uranium or own an interest in a producing uranium property in Canada, or provide any financial service or transportation service, as the rules governing these businesses are different.

Certain transactions relating to the Common Shares would be exempt from the Investment Act, including:

a)

an acquisition of the Common Shares by a person in the ordinary course of that person's business as a trader or dealer in securities,

b)

an acquisition of control of Emgold in connection with the realization of security granted for a loan or other financial assistance and not for a purpose related to the provisions of the Investment Act, and

c)

an acquisition of control of Emgold by reason of an amalgamation, merger, consolidation or corporate reorganization following which the ultimate direct or indirect control in fact of Emgold, through the ownership of the Common Shares, remained unchanged.

E.

Taxation

ALL PROSPECTIVE INVESTORS ARE ADVISED TO CONSULT THEIR OWN TAX ADVISORS WITH RESPECT TO THE SPECIFIC TAX CONSEQUENCES OF PURCHASING THE COMMON SHARES.

Material Canadian Federal Income Tax Consequences for United States Residents

The following summarizes the material Canadian federal income tax consequences generally applicable to the holding and disposition of Common Shares by a holder (in this summary, a U.S. Holder) who, (a) for the purposes of the Income Tax Act (Canada) (the Tax Act), is not resident in Canada, deals at arm's length with Emgold, holds the Common Shares as capital property and does not use or hold the Common Shares in the course of carrying on, or otherwise in connection with, a business in Canada, and (b) for the purposes of the Canada-United States Income Tax Convention, 1980 (the Treaty), is a resident solely of the United States, has never been a resident of Canada, and has not held or used (and does not hold or use) Common Shares in connection with a permanent establishment or fixed base in Canada. This summary does not apply to traders or dealers in securities, limited liability companies, tax-exempt entities, insurers, financial institutions (including those to which the mark-to-market provisions of the Tax Act apply), or any other U.S. Holder to which special considerations apply.

This summary is based on the current provisions of the Tax Act including all regulations there under, the Treaty, all proposed amendments to the Tax Act, the regulations and the Treaty publicly announced by the Government of Canada to the date hereof, and the current administrative practices of the Canada Customs and Revenue Agency. It has been assumed that all currently proposed amendments will be enacted as proposed and that there will be no other relevant change in any governing law or administrative practice, although no assurances can be given in these

respects. This summary does not take into account provincial, U.S., state or other foreign income tax law or practice. The tax consequences to any particular U.S. Holder will vary according to the status of that holder as an individual, trust, corporation, partnership or other entity, the jurisdictions in which that holder is subject to taxation, and generally according to that holder's particular circumstances. Accordingly, this summary is not, and is not to be construed as, Canadian tax advice to any particular U.S. Holder.

Dividends

Dividends paid or deemed to be paid to a U.S. Holder by Emgold will be subject to Canadian withholding tax. Under the Treaty, the rate of withholding tax on dividends paid to a U.S. Holder is generally limited to 15% of the gross amount of the dividend (or 5% if the U.S. Holder is a corporation and beneficially owns at least 10% of Emgold's voting shares). Emgold will be required to withhold the applicable withholding tax from any such dividend and remit it to the Canadian government for the U.S. Holder's account.

Disposition

A U.S. Holder is not subject to tax under the Tax Act in respect of a capital gain realized on the disposition of a Common Share in the open market unless the share is taxable Canadian property to the holder thereof and the U.S. Holder is not entitled to relief under the Treaty. A Common Share will be taxable Canadian property to a U.S. Holder if, at any time during the 60 months preceding the disposition, the U.S. Holder or persons with whom the U.S. Holder did not deal at arm's length alone or together owned, or had rights to acquire, 25% or more of Emgold's issued shares of any class or series. If the shares of Emgold constitute taxable Canadian property to the holder, the holder may be subject to Canadian income tax on the gain. The taxpayer's taxable capital gain or loss from a disposition of the share is the amount, if any, by which the proceeds of disposition exceed (or are exceeded by) the aggregate of the adjusted cost base and reasonable expenses of disposition. One-half of the capital gain is included in income and one-half of the capital loss is deductible from capital gains realized in the same year. Unused capital losses may be carried back three taxation years or forward indefinitely and applied to reduce capital gains realized in those years. It should be noted that Canada requires a withholding tax on the gross proceeds of a sale of taxable Canadian property by a non-resident. The withholding tax may be reduced on completion of a Clearance Certificate Request. If the disposition of the share is subject to tax in Canada, the non-resident must also file a Canadian income tax return reporting the disposition.

A U.S. Holder whose Common Shares do constitute taxable Canadian property, and who might therefore be liable for Canadian income tax under the Tax Act, will generally be relieved from such liability under the Treaty unless the value of such shares at the time of disposition is derived principally from real property situated in Canada. The value of Emgold's common shares is not currently derived principally from real property situated in Canada.

United States Tax Consequences

United States Federal Income Tax Consequences

NOTHING CONTAINED IN THIS SUMMARY CONTAINING ANY U.S. FEDERAL TAX ISSUE IS INTENDED OR WRITTEN TO BE USED, AND IT CANNOT BE USED FOR THE PURPOSE OF AVOIDING U.S. TAX PENALTIES UNDER THE CODE.

The following is a discussion of material United States federal income tax consequences, under current law, generally applicable to a U.S. Holder (as hereinafter defined) of common shares of Emgold. This discussion does not address all potentially relevant federal income tax matters and it does not address consequences peculiar to persons subject to special provisions of federal income tax law, such as those described below as excluded from the definition of a U.S. Holder. In addition, this discussion does not cover any state, local or foreign tax consequences. (see Taxation Material Canadian Federal Income Tax Consequences for United States Residents above) for Canadian tax consequences. **Accordingly, we strongly recommend that holders and prospective holders of common shares of Emgold consult their own tax advisors about the specific federal, state, local, and foreign tax consequences to them of purchasing, owning and disposing of common shares of Emgold, based upon their individual circumstances.**

The following discussion is based upon the sections of the Internal Revenue Code of 1986, as amended (the Code), Treasury Regulations, published Internal Revenue Service (IRS) rulings, published administrative positions of the IRS and court decisions that are currently applicable, any or all of which could be materially and adversely changed, possibly on a retroactive basis, at any time and which are subject to differing interpretations.

This discussion does not consider the potential effects, both adverse and beneficial, of any proposed legislation, which, if enacted, could be applied, possibly on a retroactive basis, at any time.

U.S. Holders

As used herein, a U.S. Holder means a holder of common shares of Emgold who is a citizen or individual resident of the United States, a corporation created or organized in or under the laws of the United States or of any political subdivision thereof, an estate whose income is taxable in the United States irrespective of source or a trust subject to the primary supervision of a court within the United States and control of a United States fiduciary as described Section 7701(a)(30) of the Code. This summary does not address the tax consequences to, and U.S. Holder does not include, persons subject to specific provisions of federal income tax law, such as tax-exempt organizations, qualified retirement plans, individual retirement accounts and other tax-deferred accounts, financial institutions, insurance companies, real estate investment trusts, regulated investment companies, broker-dealers, non-resident alien individuals, persons or entities that have a functional currency other than the U.S. dollar, shareholders subject to the alternative minimum tax, shareholders who hold common shares as part of a straddle, hedging or conversion transaction, and shareholders who acquired their common shares through the exercise of employee stock options or otherwise as compensation for services. This summary is limited to U.S. Holders who own common shares as capital assets, within the meaning of Section 1221 of the Code, and who own (directly and indirectly, pursuant to applicable rules of constructive ownership) no more than 5% of the value of the total outstanding stock of Emgold. This summary does not address the consequences to a person or entity holding an interest in a shareholder or the consequences to a person of the ownership, exercise or disposition of any options, warrants or other rights to acquire common shares. In addition, this summary does not address special rules applicable to persons holding common shares through a partnership.

Distribution on Common Shares of Emgold

Subject to the rules discussed under Passive Foreign Investment Company below, in general, U.S. Holders receiving dividend distributions (including constructive dividends) with respect to common shares of Emgold are required to include in gross income for United States federal income tax purposes the gross amount of such distributions, equal to the U.S. dollar value of such distributions on the date of receipt (based on the exchange rate on such date), to the extent that Emgold has current or accumulated earnings and profits (as determined under United States federal income tax principles), without reduction for any Canadian income tax withheld from such distributions. Such Canadian tax withheld may be credited, subject to certain limitations, against the U.S. Holder's federal income tax liability or, alternatively, may be deducted in computing the U.S. Holder's federal taxable income by those who itemize deductions. (See more detailed discussion at Foreign Tax Credit below). To the extent that distributions exceed current and accumulated earnings and profits of Emgold, they will be treated first as a return of capital up to the U.S. Holder's adjusted basis in the common shares and thereafter as gain from the sale or exchange of property. Preferential tax rates for long-term capital gains are applicable to a U.S. Holder, which is an individual, estate or trust. There are currently no preferential tax rates for long-term capital gains for a U.S. Holder, which is a corporation.

In the case of foreign currency received as a dividend that is not converted by the recipient into U.S. dollars on the date of receipt, a U.S. Holder will have a tax basis in the foreign currency equal to its U.S. dollar value on the date of receipt. Generally any gain or loss recognized upon a subsequent sale or other disposition of the foreign currency, including the exchange for U.S. dollars, will be ordinary income or loss. However, an individual whose realized gain does not exceed \$200 will not recognize that gain, provided that there are no expenses associated with the transaction

that meet the requirements for deductibility as a trade or business expense (other than travel expenses in connection with a business trip) or as an expense for the production of income.

Under current Treasury Regulations, dividends paid on Emgold's common shares, if any, generally will not be subject to information reporting and generally will not be subject to U.S. backup withholding tax. However, dividends and the proceeds from a sale of Emgold's common shares paid in the U.S. through a U.S. or U.S. related paying agent (including a broker) will be subject to U.S. information reporting requirements and may also be subject to the 28% U.S. backup withholding tax, unless the paying agent is furnished with a duly completed and signed Form W-9. Any amounts withheld under the U.S. backup withholding tax rules will be allowed as a refund or a credit against the U.S. Holder's U.S. federal income tax liability, provided the required information is furnished to the IRS.

Foreign Tax Credit

A U.S. Holder who pays (or has withheld from distributions) Canadian income tax with respect to the ownership of common shares of Emgold may be entitled, at the option of the U.S. Holder, to either receive a deduction or a tax

credit for such foreign tax paid or withheld. Generally, it will be more advantageous to claim a credit because a credit reduces United States federal income taxes on a dollar-for-dollar basis, while a deduction merely reduces the taxpayer's income subject to tax. This election is made on a year-by-year basis and generally applies to all foreign taxes paid by (or withheld from) the U.S. Holder during that year. There are significant and complex limitations which apply to the credit; among which is the general limitation that the credit cannot exceed the proportionate share of the U.S. Holder's United States income tax liability that the U.S. Holder's foreign source income bears to his or its worldwide taxable income. In the determination of the application of this limitation, the various items of income and deduction must be classified into foreign and domestic sources. Complex rules govern this classification process. In addition, this limitation is calculated separately with respect to specific classes of income such as passive category income, and general category income. Dividends distributed by Emgold will generally constitute passive category income or, in the case of certain U.S. Holders, general category income for these purposes. The availability of the foreign tax credit and the application of the limitations on the credit are fact specific, and U.S. Holders of common shares of Emgold should consult their own tax advisors regarding their individual circumstances.

Disposition of Common Shares of Emgold

Subject to the rules discussed under Passive Foreign Investment Company below, in general, U.S. Holders will recognize gain or loss upon the sale of common shares of Emgold equal to the difference, if any, between (i) the amount of cash plus the fair market value of any property received, and (ii) the shareholder's tax basis in the common shares of Emgold. Preferential tax rates apply to long-term capital gains of U.S. Holders, which are individuals, estates or trusts. In general, gain or loss on the sale of common shares of Emgold will be long-term capital gain or loss if the common shares are a capital asset in the hands of the U.S. Holder and are held for more than one year. Deductions for net capital losses are subject to significant limitations. For U.S. Holders, which are not corporations, any unused portion of such net capital loss may be carried over to be used in later tax years until such net capital loss is thereby exhausted.

For U.S. Holders that are corporations (other than corporations subject to Subchapter S of the Code), an unused net capital loss may be carried back three years and carried forward five years from the loss year to be offset against capital gains until such net capital loss is thereby exhausted.

Passive Foreign Investment Company

United States income tax law contains rules governing passive foreign investment companies (PFIC) which can have significant tax effects on U.S. Holders of foreign corporations. These rules do not apply to non-U.S. Holders. Section 1297 of the Code defines a PFIC as a corporation that is not formed in the United States if, for any taxable year, either (i) 75% or more of its gross income is passive income, which includes interest, dividends and certain rents and royalties or (ii) the average percentage, by fair market value (or, if the corporation is not publicly traded and either is a controlled foreign corporation or makes an election, by adjusted tax basis), of its assets that produce or are held for the production of passive income is 50% or more. Emgold appears to have been a PFIC for the fiscal year ended December 31, 2007, and at least certain prior fiscal years. In addition, Emgold may qualify as a PFIC in future fiscal years. **We strongly recommend that each U.S. Holder consult a tax advisor with respect to how the PFIC rules affect such U.S. Holder's tax situation.**

Each U.S. Holder who holds stock in a foreign corporation during any year in which such corporation qualifies as a PFIC is subject to United States federal income taxation under one of three alternative tax regimes at the election of such U.S. Holder. The following is a discussion of such alternative tax regimes applied to such U.S. Holders of Emgold.

A U.S. Holder who elects to treat Emgold as a qualified electing fund (QEF) will be subject, under Section 1293 of the Code, to current federal income tax for any taxable year to which the election applies in which Emgold qualifies as a PFIC on his pro rata share of Emgold's (i) net capital gain (the excess of net long-term capital gain over net short-term capital loss), which will be taxed as long-term capital gain, and (ii) ordinary earnings (the excess of earnings and profits over net capital gain), which will be taxed as ordinary income, in each case, for the shareholder's taxable year in which (or with which) Emgold's taxable year ends, regardless of whether such amounts are actually distributed. A U.S. Holder's tax basis in the common shares will be increased by any such amount that is included in income but not distributed.

The procedure a U.S. Holder must comply with in making an effective QEF election, and the consequences of such election, will depend on whether the year of the election is the first year in the U.S. Holder's holding period in

which Emgold is a PFIC. If the U.S. Holder makes a QEF election in such first year, i.e., a timely QEF election, then the U.S. Holder may make the QEF election by simply filing the appropriate documents at the time the U.S. Holder files his tax return for such first year. If, however, Emgold qualified as a PFIC in a prior year during the U.S. Holder's holding period, then, in order to avoid the Section 1291 rules discussed below, in addition to filing documents, the U.S. Holder must elect to recognize under the rules of Section 1291 of the Code (discussed herein), any gain that he would otherwise recognize if the U.S. Holder sold his stock on the qualification date. The qualification date is the first day of Emgold's first tax year in which Emgold qualified as a QEF with respect to such U.S. Holder. For purposes of this discussion, a U.S. Holder who makes (i) a timely QEF election, or (ii) an untimely QEF election and the above-described gain-recognition election under Section 1291 is referred to herein as an Electing U.S. Holder. A U.S. Holder who holds common shares at any time during a year of Emgold in which Emgold is a PFIC and who is not an Electing U.S. Holder (including a U.S. Holder who makes an untimely QEF election and does not make the above-described gain-recognition election) is referred to herein as a Non-Electing U.S. Holder. An Electing U.S. Holder (i) generally treats any gain realized on the disposition of his Emgold common shares as capital gain; and (ii) may either avoid interest charges resulting from PFIC status altogether, or make an annual election, subject to certain limitations, to defer payment of current taxes on his share of Emgold's annual realized net capital gain and ordinary earnings subject, however, to an interest charge. If the U.S. Holder is not a corporation, any interest charge imposed under the PFIC regime would be treated as personal interest that is not deductible.

In order for a U.S. Holder to make (or maintain) a valid QEF election, Emgold must provide certain information regarding its net capital gains and ordinary earnings and permit its books and records to be examined to verify such information. Emgold intends to make the necessary information available to U.S. Holders to permit them to make (and maintain) QEF elections with respect to Emgold. **We strongly recommend that each prospective U.S. Holder consult a tax advisor regarding the availability of, and procedure for making, the QEF election.**

A QEF election, once made with respect to Emgold, applies to the tax year for which it was made and to all subsequent tax years, unless the election is invalidated or terminated, or the IRS consents to revocation of the election. If a U.S. Holder makes a QEF election and Emgold ceases to qualify as a PFIC in a subsequent tax year, the QEF election will remain in effect, although not applicable, during those tax years in which Emgold does not qualify as a PFIC. Therefore, if Emgold again qualifies as a PFIC in a subsequent tax year, the QEF election will be effective and the U.S. Holder will be subject to the rules described above for Electing U.S. Holders in such tax year and any subsequent tax years in which Emgold qualifies as a PFIC. In addition, the QEF election remains in effect, although not applicable, with respect to an Electing U.S. Holder even after such U.S. Holder disposes of all of his or its direct and indirect interest in the shares of Emgold. Therefore, if such U.S. Holder reacquires an interest in Emgold, that U.S. Holder will be subject to the rules described above for Electing U.S. Holders for each tax year in which Emgold qualifies as a PFIC.

In the case of a Non-Electing U.S. Holder, special taxation rules under Section 1291 of the Code will apply to (i) gains realized on the disposition (or deemed to be realized by reasons of a pledge) of his Emgold common shares and (ii) certain excess distributions, as defined in Section 1291(b), by Emgold.

A Non-Electing U.S. Holder generally would be required to pro rate all gains realized on the disposition of his Emgold common shares and all excess distributions on his Emgold common shares over the entire holding period for the common shares. All gains or excess distributions allocated to prior years of the U.S. Holder (excluding any

portion of the holder's period prior to the first day of the first year of Emgold (i) which began after December 31, 1986, and (ii) for which Emgold was a PFIC) would be taxed at the highest tax rate for each such prior year applicable to ordinary income. The Non-Electing U.S. Holder also would be liable for interest on the foregoing tax liability for each such prior year calculated as if such liability had been due with respect to each such prior year. A Non-Electing U.S. Holder that is not a corporation must treat this interest charge as personal interest which, as discussed above, is wholly non-deductible. The balance, if any, of the gain or the excess distribution will be treated as ordinary income in the year of the disposition or distribution, and no interest charge will be incurred with respect to such balance. In certain circumstances, the sum of the tax and the PFIC interest charge may exceed the amount of the excess distribution received, or the amount of proceeds of disposition realized, by the U.S. Holder.

If Emgold is a PFIC for any taxable year during which a Non-Electing U.S. Holder holds Emgold common shares, then Emgold will continue to be treated as a PFIC with respect to such Registrant common shares, even if it is no longer definitionally a PFIC. A Non-Electing U.S. Holder may terminate this deemed PFIC status by electing to recognize gain (which will be taxed under the rules discussed above for Non-Electing U.S. Holders) as if such Emgold common shares had been sold on the last day of the last taxable year for which it was a PFIC.

Effective for tax years of U.S. Holders beginning after December 31, 1997, U.S. Holders who hold (actually or constructively) marketable stock of a foreign corporation that qualifies as a PFIC may elect to mark such stock to the market annually (a "mark-to-market election"). If such an election is made, such U.S. Holder will generally not be subject to the special taxation rules of Section 1291 discussed above. However, if a Non-Electing U.S. Holder makes the mark-to-market election after the beginning of the holding period for the PFIC stock, then the Section 1291 rules will apply to certain dispositions of, distributions on and other amounts taxable with respect to Emgold common shares. A U.S. Holder who makes the mark-to-market election will include in income for each taxable year for which the election is in effect an amount equal to the excess, if any, of the fair market value of the common shares of Emgold as of the close of such tax year over such U.S. Holder's adjusted basis in such common shares. In addition, the U.S. Holder is allowed a deduction for the lesser of (i) the excess, if any, of such U.S. Holder's adjusted tax basis in the common shares over the fair market value of such shares as of the close of the tax year, or (ii) the excess, if any, of (A) the mark-to-market gains for the common shares in Emgold included by such U.S. Holder for prior tax years, including any amount which would have been treated as a mark-to-market gain for any prior tax year but for the Section 1291 rules discussed above with respect to Non-Electing U.S. Holders, over (B) the mark-to-market losses for shares that were allowed as deductions for prior tax years. A U.S. Holder's adjusted tax basis in the common shares of Emgold will be adjusted to reflect the amount included in or deducted from income as a result of a mark-to-market election. A mark-to-market election applies to the taxable year in which the election is made and to each subsequent taxable year, unless Emgold common shares cease to be marketable, as specifically defined, or the IRS consents to revocation of the election. A U.S. Holder makes a mark-to-market election by filing IRS Form 8621. No view is expressed regarding whether common shares of Emgold are marketable for these purposes or whether the election will be available.

Under Section 1291(f) of the Code, the IRS has issued Proposed Treasury Regulations that, subject to certain exceptions, would treat as taxable certain transfers of PFIC stock by Non-Electing U.S. Holders that are generally not otherwise taxed, such as gifts, exchanges pursuant to corporate reorganizations, and transfers at death. Generally, in such cases the basis of Emgold common shares in the hands of the transferee and the basis of any property received in the exchange for those common shares would be increased by the amount of gain recognized. Under the Proposed Treasury Regulations, an Electing U.S. Holder would not be taxed on certain transfers of PFIC stock, such as gifts, exchanges pursuant to corporate reorganizations, and transfers at death. The transferee's basis in this case will depend on the manner of the transfer. In the case of a transfer by an Electing U.S. Holder upon death, for example, the transferee's basis is generally equal to the fair market value of the Electing U.S. Holder's common shares as of the date of death under Section 1014 of the Code. The specific tax effect to the U.S. Holder and the transferee may vary based on the manner in which the common shares are transferred. **We strongly recommend that each prospective U.S. Holder of Emgold consult a tax advisor with respect to how the PFIC rules affect his or its tax situation.**

Certain special, generally adverse, rules will apply with respect to Emgold common shares while Emgold is a PFIC unless the U.S. Holder makes a timely QEF election. For example under Section 1298(b)(6) of the Code, a U.S. Holder who uses PFIC stock as security for a loan (including a margin loan) will, except as may be provided in regulations, be treated as having made a taxable disposition of such shares.

ITEM 11.

QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Transaction Risk and Currency Risk Management

Emgold's current operations do not employ financial instruments or derivatives. Currently the Company has no long-term debt other than the Class A preference shares, or source of revenue as the Company is in the resource exploration and early development stage on its mineral property interests and in the research and development stage on its ceramics technology.

Exchange Rate Sensitivity

The majority of Emgold's operations are in the United States, but its administrative operations are in Canada. The Company is affected by exchange rate risk, as the equity financings by the Company to date have been denominated in Canadian dollars. Excess cash is invested primarily in United States dollar denominated investments and may be affected by exchange rate risk for Canadian dollar expenditures. In future, it will be necessary to do further equity or other forms of financing. The funds may be received in either Canadian or U.S. dollars. Funds received in U.S. dollars will likely remain in U.S. dollars and be used for expenditures in U.S. dollars, to reduce exchange risk. The risk that the Company is subject to, will be if expenses are incurred in Canadian dollars, with large fluctuations in the Canadian-U.S. dollar exchange rate at that time of the transaction. Other than the foreign exchange loss or gain related to the dividends payable on the convertible preference shares described below, the Company's potential near-term exchange risk associated with fluctuation of exchange rates is not believed to be material. Exchange gain losses incurred in fiscal 2007 were \$63,988 on \$6.1 million in expenditures, a nominal amount relating primarily to the preference shares described below as well as Canadian dollar denominated cash and working capital items.

Emgold has preference shares with an interest rate of 7% per annum, denominated in Canadian dollars. Dividends payable on the preference shares are recorded when they are declared by the Board of Directors, but will remain

unpaid until the Company has the resources to do so. The debt portion of the convertible preference shares is being accreted over a period of ten years, based on management's best estimate of the life of the convertible preference shares at the time of their issuance. Foreign exchange loss on the debt conversion to United States dollars was \$111,078 in fiscal 2007 compared to a gain of \$1,616 in fiscal 2006 which are not significant to the operations of the Company.

Interest Rate Risk and Equity Price Risk

Emgold has been equity financed and does not have any debt that is subject to interest rate change risks.

Commodity Price Risk

While the value of Emgold's resource properties can always be said to relate to the price of precious metals and the outlook for same, Emgold currently does not have any operating mines and hence does not have any hedging or other commodity based risk respecting its operations.

ITEM 15.

CONTROLS AND PROCEDURES

a) Evaluation of disclosure controls and procedures.

The Company maintains disclosure controls and procedures designed to ensure that information required to be disclosed in our reports filed or submitted under the Securities Exchange Act of 1934 is (1) recorded, processed, summarized and reported, within the time periods specified in the Securities and Exchange Commission's rules and forms and (2) accumulated and communicated to management, including our Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclosure.

Management has carried out an evaluation of the effectiveness of the design and operation of the Company's disclosure controls and procedures as of the end of the period covered by this annual report, being December 31, 2007. This evaluation was carried out under the supervision and with the participation of our company's management, including our Chief Executive and Chief Financial Officers. Based upon that evaluation, our Chief Executive and Chief Financial Officers concluded that our company's disclosure controls and procedures are sufficiently designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the Company's generally accepted accounting principles effective as at the end of the period covered by this report.

b) Management's annual report on internal control over financial reporting

Management is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of our Co-Chief Executive Officers and of the Chief Financial Officer to provide reasonable assurance regarding the reliability of financial reporting and preparation of financial statements for external purposes in accordance with generally accepted

accounting principles.

Management has assessed the design and operating effectiveness of our internal control over financial reporting as of December 31, 2007, based on the framework in Internal Control Integrated Framework issued by the Committee of Sponsoring Organizations (COSO) of the Treadway Commission. Based on our evaluation under the framework in Internal Control-Integrated Framework, management concluded that the Company's internal control over financial reporting was effective as of December 31, 2007. However, certain weaknesses do arise, primarily from the limited number of personnel employed in the accounting and financial reporting area, a situation that is common in smaller companies. As a consequence of this situation: (i) it is not feasible to achieve the complete segregation of duties; and (ii) the Company is unable to design internal controls in house providing independent review at a sufficient level of expertise in complex areas of financial accounting, such as taxation and the Canadian to U.S. GAAP reconciliation.

The Company believes that the weaknesses identified in its systems of internal control are mitigated by the thorough review of the Company's financial statements by senior management, the Audit Committee of the Board and by consulting with external experts. In addition, senior management is active in the Company's day-to-day operations and in monitoring the Company's financial reporting. Regardless, these mitigating factors cannot completely eliminate the possibility that a material misstatement will occur as a result of the weaknesses identified in the Company's internal controls over financial reporting. A cost effective system of internal controls over financial reporting, no matter how well conceived or operated, can provide only reasonable, not absolute, assurance that the objectives of the internal controls over financial reporting are achieved.

(c) Attestation Report of registered public accounting firm

This Annual Report does not include an attestation report of our registered public accounting firm regarding internal control over financial reporting. Management's report was not subject to attestation by our independent registered

public accounting firm pursuant to temporary rules of the Securities and Exchange Commission that permit us to provide only management's report in this Annual Report.

d) Changes in internal controls over financial reporting .

There were no significant changes in our internal controls over financial reporting identified in connection with the evaluation required by paragraph (d) of 17 CFR 240.13a-15 or 240.15d-15 that occurred during the period covered by this annual report that has affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

ITEM 16A

AUDIT COMMITTEE FINANCIAL EXPERTS

Composition of the Audit Committee

The members of the audit committee are Messrs Robin A.W. Elliott, Kenneth Yurichuk and Stephen J. Wilkinson.

A member of the audit committee is independent if the member has no direct or indirect material relationship with the Company. A material relationship means a relationship, which could, in the view of the Company's board of directors, reasonably interfere with the exercise of a member's independent judgement. None of the current members of the board have a material relationship with the Company, although Mr. Yurichuk provides consulting services through a private company which he controls, 759924 Ontario Ltd. which earned \$49,430 in the year ended December 31, 2007, and as such, is not considered to be independent. No fees are paid to Mr. Stephen J. Wilkinson or Mr. Robin A. W. Elliott.

At the date of this Annual Report on Form 20-F, the Company is in compliance with the audit committee composition rule set out in Multilateral Instrument 52-110 *Audit Committees* (MI 52-110), the Canadian regulatory policy respecting audit committees, as a majority of the members of the audit committee are considered independent.

A member of the audit committee is considered financially literate if he or she has the ability to read and understand a set of financial statements that present a breadth and level of complexity of accounting issues that are generally comparable to the breadth and complexity of the issues that can reasonably be expected to be raised by the Company. All of the audit committee members are financially literate. The board of directors has determined that Mr. Elliott

qualifies as a financial expert as defined in Item 401(e) of Regulation S-B, by virtue of his work experience and his education. Mr. Elliott is independent as independence is defined in the listing standards of the New York Stock Exchange.

Relevant Education and Experience

Disclosure respecting the education and experience of the audit committee is provided in their biographies above. As a result of their education and experience, each member of the audit committee has familiarity with, an understanding of, or experience in:

.

The accounting principles used by the Company to prepare its financial statements, and the ability to assess the general application of those principles in connection with estimates, accruals and reserves;

.

Reviewing or evaluating financial statements that present a breadth and level of complexity of accounting issues that are generally comparable to the breadth and complexity of issues that can reasonably be expected to be raised by the Company's financial statements, and

.

An understanding of internal controls and procedures for financial reporting.

ITEM 16B.

CODE OF ETHICS

The Company has adopted a code of ethics that applies to the Company's chief executive officer, the chief financial officer and other members of senior management. The Company's Code of Ethics is attached as an exhibit to this Form 20-F. There have been no amendments to the code of ethics and no waivers during the year ended December 31, 2007, and to the date of this Form 20-F.

ITEM 16C.**PRINCIPAL ACCOUNTANT FEES AND SERVICES**

The following table discloses the aggregate fees billed for each of the last two fiscal years for professional services rendered by the Company's audit firm for various services.

Services:	Years ended December 31,	
	2007 (Cdn\$)	2006 (Cdn\$)
Audit fees	\$ 58,948	\$ 40,000
Audit-related fee	7,949	3,332
Tax fees	12,250	6,500
All other fees	400	165
Total fees	\$ 79,547	\$ 49,997
Note:		

Audit-Related Fee includes services that are traditionally performed by the auditor. These audit-related services include employee benefit audits, due diligence assistance, accounting consultations on proposed transactions, internal control reviews and audit or attest services not required by legislation or regulation.

From time to time, management of the Company recommends to and requests approval from the audit committee for non-audit services to be provided by the Company's auditors. The audit committee routinely considers such requests at committee meetings, and if acceptable to a majority of the audit committee members, pre-approves such non-audit services by a resolution authorizing management to engage the Company's auditors for such non-audit services, with set maximum dollar amounts for each itemized service. During such deliberations, the audit committee assesses, among other factors, whether the services requested would be considered prohibited services as contemplated by the United States Securities and Exchange Commission and whether the services requested and the fees related to such services could impair the independence of the auditors. All of the non-audit related services provided by the Company's audit firm were pre-approved by the audit committee.

During the year ended December 31, 2007, none of the services described above under Principal Accountant Fees and Services under the captions Audit-Related Fees, Tax Fees, and All Other Fees were approved by the Audit Committee pursuant to paragraph (c)(7)(i)(C) of Rule 2-01 of Regulation S-X.

ITEM 16D.**EXEMPTIONS FROM THE LISTING STANDARDS FOR AUDIT COMMITTEES**

PART III

ITEM 17.

FINANCIAL STATEMENTS

The Company's consolidated financial statements are stated in United States dollars and are prepared in accordance with Canadian GAAP, the application of which, in the case of the Company, conforms in all material respects for the periods presented with United States GAAP, except as disclosed in Note 14 to the consolidated financial statements.

The following statements and notes thereto as required under Item 17 are attached hereto and found immediately following the text of this Annual Report. The audit report of PricewaterhouseCoopers LLP, independent Chartered Accountants, is included herein immediately preceding the consolidated financial statements.

ITEM 18.

FINANCIAL STATEMENTS

ITEM 19.

EXHIBITS

Financial Statements:

(i)

Auditors' Reports on the consolidated balance sheets as at December 31, 2007 and 2006, and the consolidated statements of operations, comprehensive loss and deficit and cash flows for each of the three years ended December 31, 2007, 2006 and 2005;

(ii)

Consolidated balance sheets as at December 31, 2007 and 2006;

(iii)

Consolidated statements of operations, comprehensive loss and deficit, shareholder's equity, and cash flows for each of the three years ended December 31, 2007, 2006 and 2005;

(iv)

Consolidated statements of changes in cash flows for the periods referred to in (iii) above;

(v)

Notes to the consolidated financial statements.

Index to Exhibits

The following exhibits are filed with this Annual Report on Form 20-F in respect of the current year.

<u>Exhibit Number</u>	<u>Description</u>
1.1*	Articles and Memorandum of Emgold Mining Corporation; originally incorporated as 361869 B.C. Ltd. on March 17, 1989
2.1*	2005 Stock Option Plan (10% Rolling) June 8, 2005.
4.1*	World Wide License Agreement with Ceramext, LLC dated September 17, 2003
4.2*	Standard Industrial Lease - Gross and Lease Addendum and Option Agreement with Mediation/Arbitration of Disputes attachment - dated April 7, 2004, with H & D Shluker Family Trust
4.3*	Option Agreement on the Jazz Property (formerly Dog Claim Group) dated March 15, 2004, with Mr. M.A. Kaufman
4.4*	Amended lease agreement between Mary Bouma, Erica Erickson, and William Toms and the Idaho-Maryland Mining Corporation, dated January 26, 2007
5.1*	United States Patent No.: US 6,547,550 B1, dated April 15, 2003 (Guenther)
6.1	Calculation of earnings per share N/A
7.1	Explanation of calculation of ratios N/A
8.1*	List of subsidiaries
11.1*	Code of Ethics
12.1	<u>Certification pursuant to Rule 13a-14(A)/15d-14(a) of Chief Executive Officer.</u>
12.2	<u>Certification pursuant to Rule 13a-14(A)/15d-14(a) of Chief Financial Officer.</u>
13.1	<u>Certification pursuant to 18 U.S.C. Section 1350 of Chief Executive Officer.</u>
13.2	<u>Certification pursuant to 18 U.S.C. Section 1350 of Chief Financial Officer.</u>
99.1*	Preliminary Assessment Technical Report dated November 22, 2004, prepared by AMEC Americas Limited
99.2*	Letter dated June 22, 2007, from the City of Grass Valley referencing the acceptance of the applications for the Idaho-Maryland Mine Annexation Application (05PLN-10), Prezone Application (05PLN-11, General Plan Amendment Application (05PLN-12), Use Permit Application (05PLN-13), Development Review Application (05DRC-05)

*These exhibits have been filed with the Company's registration statement on Form 20-F and are incorporated by reference.

Glossary of Geologic and Mining Terms

Anomaly

Any deviation from normal. Examples would include geologic features or concentrations of metal noticeably different than surrounding features or metals.

Arsenopyrite

A sulphide of arsenic and iron.

Assay

An analysis to determine the presence, absence or quantity of one or more components.

Axis

An imaginary hinge line about which the fold limbs are bent. The axis of a fold can be at the top or bottom of the fold, can be tilted or horizontal.

Batholith

An intrusion, usually granitic, which has a large exposed surface area and no observable bottom. Usually associated with orogenic belts. Of a large, deep-seated rock intrusion, usually granite, often forming the base of a mountain range, and uncovered only by uplifted erosion.

Bed

The smallest division of a stratified rock series, marked by a well-defined divisional plane from its neighbours above and below; an ore deposit, parallel to the stratification, constituting a regular member of the series of formations.

Bedding

Condition where planes divide sedimentary rocks of the same or different lithology.

Bedrock

Solid rock exposed at the surface of the earth, or overlain by surficial deposits.

Breccia

Rock made up of angular fragments in a matrix of finer-grained material or cementing material.

Brecciated

Rock broken up by geological forces.

Bulk sample

A very large sample, the kind of sample to take from broken rock, or from gravels and sands when testing placer deposits.

Calcite

Calcium carbonate, a mineral found in limestone, chalk and marble and metamorphic rocks.

Chalcopyrite

Copper iron sulphide mineral and an important ore of copper.

Chip sample

A sample composed of discontinuous chips taken along a rock surface across a given line.

Claim

That portion of public mineral lands, which a party has staked or marked out in accordance with provincial or state mining laws, to acquire the right to explore for the minerals under the surface.

Contact

The place or surface where two different kinds of rocks come together.

Crystalline

Means the specimen is made up of one or more groups of crystals.

Cut-off grade

The minimum grade of mineralization used to establish quantitative and qualitative estimates of total mineralization.

Deposit

A natural occurrence of a useful mineral or ore in sufficient extent and degree of concentration to invite exploitation.

Diabase

Igneous hypabyssal rocks that are transitional from volcanic to plutonic. The name is applied differently in different parts of the world leading to considerable confusion.

Diamond drill

A type of rotary drill in which the cutting is done by abrasion using diamonds embedded in a matrix rather than by percussion. The drill cuts a core of rock which is recovered in long cylindrical sections.

Diamond drill hole

A method of obtaining a cylindrical core of rock by drilling with a diamond impregnated bit.

Dilution

Results from the mixing in of unwanted waste rock with the ore during mining.

Dip

The angle at which a stratum or drill hole is inclined from the horizontal. Alternatively, a geological measurement of the angle of maximum slope of planar elements in rocks.

Displacement

Relative movement of rock on opposite side of a fault; also known as dislocation.

Fault

A fracture or fracture zone along which there has been displacement of the sides relative to one another parallel to the fracture. Alternatively, a break in the continuity of a body of rock.

Feasibility study

Engineering study to determine if a mineral property can be developed at a profit, and which methods should be used to develop it.

Feldspar

A group of aluminum silicate minerals closely related in chemical composition and physical properties. There are two major chemical varieties of feldspar: the potassium aluminum, or potash feldspars and the sodium-calcium-aluminum, or plagioclase feldspars.

Felsic

Light-coloured silicate minerals, mainly quartz and feldspar, or an igneous rock comprised largely of felsic minerals (granite, rhyolite).

Folds

Flexures in bedded or layered rocks. They are formed when forces are applied gradually to rocks over a long period of time.

Footwall

The mass of rock that lies beneath a fault, an ore body, or a mine working; the top of the rock stratum underlying a vein or bed of ore.

Fracture

Breaks in a rock, usually due to intensive folding or faulting.

Gangue

Term used to describe worthless minerals or rock waste mixed in with the valuable minerals.

Geochemical anomaly

An area of elevated values of a particular element in soil or rock samples collected during the preliminary reconnaissance search for locating favourable metal concentrations that could indicate the presence of surface or drill targets.

Geochemical survey

A systematic measure of the abundance of different elements in rock, soil, water, etc.

Geochemistry

Study of chemical elements in rocks or soil.

Geological mapping

Surveys defining the surface distribution of rock varieties, age relationships and structural features.

Geophysics

The study of the physical properties of rocks, minerals, and mineral deposits.

Gouge

Soft, pulverized mixture of rock and mineral material found along shear (fault) zones and produced by the differential movement across the plane of slippage.

Grab sampling

A random sample of mineralized rock with no statistical validity, taken simply to check the type of mineralization.

Grade

The concentration of each ore metal in a rock sample, usually given as weight percent. Where extremely low concentrations are involved, the concentration may be given in grams per tonne (g/t) or ounces per ton (oz/t). The grade of an ore deposit is calculated, often using sophisticated statistical procedures, as an average of the grades of a very large number of samples collected from throughout the deposit.

Granite

An intrusive igneous rock consisting essentially of alkali feldspar and quartz, plus micas and accessory minerals.

Graphite

A soft black form of native carbon.

Grid

A network composed of two sets of uniformly spaced parallel lines, usually intersecting at right angles and forming squares, superimposed on a map, chart, or aerial photograph, to permit identification of ground locations by means of a system of coordinates and to facilitate computation of direction and distance and size of geologic, geochemical or geophysical features.

Hanging wall

and footwall

Terms used in reference to faults when mining along a fault, your feet would be in the footwall side of the fault and the other side would be hanging over your head. The rock mass above a fault plane, vein, lode, ore body, or other structure, the underside of the country rock overlying a vein or bed of ore.

Heavy mineral

concentrate sample

A sample of heavy minerals collected from stream gravels and concentrated by panning.

Hectare

A square of 100 metres on each side; 10,000 square metres or 2.471 acres.

Host rock

The rock within which the ore deposit occurs.

Igneous

Rock formed by the cooling of molten silicate mineral.

Induced polarization

(I.P.) method

A geophysical method used to measure various electrical responses to the passage of alternating currents of different frequencies through near-surface rocks or to the passage of pulses of electricity.

Intermediate

An igneous rock made up of both felsic and mafic minerals (diorite).

Intrusion

General term for a body of igneous rock formed below the earth's surface.

Intrusive rock

Any igneous rock solidified from magma beneath the earth's surface.

Joint venture

agreement

An agreement where the parties agree to the terms on which a property will be explored, developed, and mined.

Lode

See vein.

Mafic

A term used to describe ferromagnesian minerals. Rocks composed mainly of ferromagnesian minerals are correctly termed melanocratic.

Magma

Naturally occurring molten rock material, generated within the earth and capable of intrusion and extrusion, from which igneous rocks have been derived through solidification and related processes. It may or may not contain suspended solids (such as crystals and rock fragments) and/or gas phases.

Massive

Implies large mass. Applied in the context of hand specimens of, for example, sulphide ores; it usually means the specimen is composed essentially of sulphides with few, if any, other constituents.

Melange

A body of rock characterized by a lack of internal continuity of contacts or strata and by the inclusion of fragments and blocks of all sized and sometimes various types, embedded in a fine-grained matrix.

Metamorphosed or

metamorphic

A rock that has been altered within the earth's crust by physical and chemical processes including heat, pressure and fluids.

Meta-sediment

A sediment or sedimentary rock that shows evidence of metamorphosis.

Metavolcanic

An informal term for volcanic rock that shows evidence of metamorphosis.

Mesozoic

An era of geologic time, from the end of the Paleozoic era to the start of the Cenozoic, or from about 225 to about 50 million years ago.

Mineral

A naturally occurring, inorganic, solid element or compound that possesses an orderly internal arrangement of atoms and a unique set of physical and chemical properties.

Mineral claim

A legal entitlement to minerals in a certain defined area of ground.

Mineral deposit or

mineralized material

A mineralized underground body which has been intersected by sufficient closely spaced drill holes and / or underground sampling to support sufficient tonnage and average grade of metal(s) to warrant further exploration-development work. This deposit does not qualify as a commercially mineable ore body (reserves), as prescribed under Commission standards, until a final and comprehensive economic, technical, and legal feasibility study based upon the test results is concluded.

Mineralization

The concentration of metals and their chemical compounds within a body of rock.

Mining lease

A claim or number of claims to which the right to mine is assigned.

Net smelter returns

royalty

Means the amount actually paid to the mine or mill owner from the sale of ore, minerals and other materials or concentrates mined and removed from mineral properties. A royalty based on net smelter returns provides cash flow that is free of any operating or capital costs and environmental liabilities.

Option agreement

An agreement where the optionee can exercise certain options to increase contracted interest in a property by making periodic payments to the optionor or by exploring, developing or producing from the optionor's property.

Ore

A natural aggregate of one or more minerals which may be mined and sold at a profit, or from which some part may be profitably separated.

Ore body

A solid and fairly continuous mass of ore.

Ore reserve

The measured quantity and grade of all or part of a mineralized body in a mine or undeveloped mineral deposit for which the mineralization is sufficiently defined and measured on three sides to form the basis of at least a preliminary mine production plan for economically viable mining.

Outcrop

An in-situ exposure of bedrock.

Paleozoic

An era of geologic time, from the end of the Precambrian to the beginning of the Mesozoic,

or from about 570 to about 225 million years ago.

Pluton

Term for an igneous intrusion, usually formed from magma.

Pyrite

Iron sulphide (FeS_2)

Qualified person

In accordance with NI 43-101, a qualified person means an individual with at least five years of experience in mineral exploration, mine development or operation or mineral project assessment, or any combination of these. This person must also have experience relevant to the subject matter of the mineral project, and must be member in good standing of a professional association.

Quartz

A mineral composed of silicon dioxide.

Reclamation bond

Usually required when mechanized work is contemplated. Used to reclaim any workings or put right any damage, if your reclamation does not satisfy the requirements of the regulations.

Reconnaissance

A general examination or survey of a region with reference to its main features, usually as a preliminary step to a more detailed survey.

Replacement

mineralization

Mineral deposit formed by replacement of previous rock.

Reverse circulation

drill

A rotary percussion drill in which the drilling mud and cuttings return to the surface through the drill pipe.

Rock chip sample

A rock sample consisting of chips collected continuously over a specified width.

Rotary drilling

A drilling method where a hard-toothed bit rotates at the bottom of a drill pipe, grinding a hole into the rock. Lubrication is provided by continuously circulating drilling fluid, which brings the rock cuttings to the surface.

Royalty interest

A royalty interest is tied to a unit of production, such as tonne of concentrate or ounce of gold or silver produced. A common form of royalty interest is the net smelter return.

Sample

Small amount of material that is supposed to be absolutely typical or representative of the object being sampled.

Schist

A strongly foliated crystalline rock, formed by dynamic metamorphism, that has well-developed parallelism of more than 50% of the minerals present, particularly those of lamellar or elongate prismatic habit, e.g. mica and hornblende.

Sedimentary

A rock formed from cemented or compacted sediments.

Sediments

Are composed of the debris resulting from the weathering and break-up of other rocks that have been deposited by or carried to the oceans by rivers, or left over from glacial erosion or sometimes from wind action.

Sericite

A fine-grained variety of mica occurring in small scales, especially in schists.

Shaft

Vertical opening downwards.

Showing

A rock outcrop revealing the presence of a certain mineral.

Silicate

Most rocks are made up of a small number of silicate minerals ranging from quartz (SiO_2) to more complex minerals such as orthoclase feldspar (KAlSi_3O_8) or hornblende ($\text{Ca}_2\text{Na}(\text{Mg},\text{Fe})_4(\text{Al},\text{Fe},\text{Ti})\text{Si}_8\text{O}_{22}(\text{OH})_2$).

Soil sampling

Systematic collection of soil samples at a series of different locations in order to study the distribution of soil geochemical values.

Sphalerite

A zinc sulphide, ZnS , which may contain some iron and cadmium; the principal ore of zinc and cadmium.

Stock

An igneous intrusive body of unknown depth with a surface exposure of less than 104 square kilometres. The sides, or contacts, of a stock, like those of a batholith, are usually steep and broaden with depth.

Stockwork

A mineral deposit consisting of a three-dimensional network of closely spaced planar or irregular veinlets.

Stope

An excavation in a mine from which ore is, or has been, extracted.

Strike

The bearing, or magnetic compass direction, of an imaginary line formed by the intersection of a horizontal plane with any planar surface, most commonly with bedding

planes or foliation planes in rocks.

Tailings

Material rejected from a mill after recoverable valuable minerals have been extracted.

Tailings pond

A pond where tailings are disposed.

Trenching

The act of blasting or digging through overburden or outcrop to attend fresh bedrock for mapping and sampling.

Veins

The mineral deposits that are found filling openings in rocks created by faults or replacing rocks on either side of faults.

Waste

Rock which is not ore. Usually referred to that rock which has to be removed during the normal course of mining in order to get at the ore.

Workings

A part of a mine, quarry, etc., where work is or has been done.

.

SIGNATURES

Emgold Mining Corporation certifies that it meets all of the requirements for filing on Form 20-F and that it has duly caused and authorized the undersigned to sign this Annual Report on its behalf.

CONSOLIDATED FINANCIAL STATEMENTS

Years Ended December 31, 2007, 2006 and 2005

Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements of Emgold Mining Corporation (the Company) have been prepared by and are the responsibility of the management of the Company. The consolidated financial statements are prepared in accordance with Canadian generally accepted accounting principles and reflect management's best estimates and judgement based on currently available information.

The Audit Committee of the Board of Directors, consisting of three independent directors, meets periodically with management and the independent auditors to review the scope and results of the annual audit, and to review the consolidated financial statements and related financial reporting matters prior to submitting the consolidated financial statements to the Board for approval.

The Company's independent auditors, PricewaterhouseCoopers LLP, who are appointed by the shareholders, conducted an audit in accordance with Canadian generally accepted auditing standards. Their report outlines the scope of their audit and gives their opinion on the consolidated financial statements.

Management has developed and maintains a system of internal controls to provide reasonable assurance that the Company's assets are safeguarded, transactions are authorized and financial information is accurate and reliable.

Auditors Report

To the Shareholders of

Emgold Mining Corporation

We have audited the consolidated balance sheets of Emgold Mining Corporation (the Company) as at December 31, 2007 and 2006 and the consolidated statements of operations, comprehensive loss and deficit, shareholders equity and cash flows for each of the years in the three year period ended December 31, 2007. These consolidated financial statements are the responsibility of the Company s management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform an audit to obtain reasonable assurance whether the consolidated financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at December 31, 2007 and 2006 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2007 in accordance with Canadian generally accepted accounting principles.

Comments by Auditors for U.S. Readers on Canada-U.S. Reporting Difference

In the United States, reporting standards for auditors require the addition of an explanatory paragraph (following the opinion paragraph) when there are events that cast substantial doubt on the Company's ability to continue as a going concern, such as those described in note 1 to the consolidated financial statements. Our report to the shareholders dated April 24, 2008 is expressed in accordance with Canadian reporting standards which do not permit a reference to such events and conditions in the auditors' report when they are properly accounted for and adequately disclosed in the consolidated financial statements.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005
(Expressed in United States dollars)

1.

Nature of operations and going concern

The accompanying consolidated financial statements have been prepared using Canadian generally accepted accounting principles (Canadian GAAP) applicable to a going concern.

The Company is in the process of exploring its mineral property interests and has not yet determined whether its mineral property interests contain mineral reserves that are economically recoverable. The Company's continuing operations and the underlying value and recoverability of the amounts shown for mineral property interests are entirely dependent upon the existence of economically recoverable mineral reserves, the ability of the Company to obtain the necessary financing to complete the exploration and development of its mineral property interests and on future profitable production or proceeds from the disposition of the mineral property interests or other interests.

Emgold Mining Corporation (the Company) incurred a loss of \$5,836,129 for the year ended December 31, 2007, and had net current assets of \$4,563,485 and an accumulated deficit of \$38,755,183 at December 31, 2007. Operations for the year ended December 31, 2007, have been funded primarily from proceeds from the issuance of capital stock.

The Company's current financial position and forecast cash flow requirements for the next year to meet its mineral property requirements and corporate requirements indicate that there is substantial doubt about the ability of the Company to continue as a going concern.

The Company's ability to continue operations is contingent on its ability to obtain additional financing. Management is confident that it will be able to secure the necessary financing; however, there is no assurance that management will be successful in achieving this objective.

These consolidated financial statements do not reflect adjustments to the carrying value of assets and liabilities, the reported revenues and expenses and balance sheet classifications used that would be necessary if the going concern assumption were not appropriate. Such adjustments could be material.

2.

Significant accounting policies

(a)

Basis of presentation

These consolidated financial statements have been prepared using Canadian GAAP and include the accounts of the Company and its wholly owned subsidiaries, Idaho-Maryland Mining Corporation, Emgold (US) Corp. and Golden Bear Ceramics Company. All inter-company transactions are eliminated on consolidation. As described in note 14, accounting principles generally accepted in Canada differ in certain material respects from accounting principles generally accepted in the United States.

(b)

Use of estimates

The preparation of financial statements in conformity with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenditures during the reporting period. Actual results could differ materially from those estimated.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

(c)

Cash and cash equivalents

Cash and cash equivalents consist of cash on deposit with banks and highly liquid short-term interest-bearing investments with maturities of 90 days or less from the original date of acquisition. Cash and cash equivalents are recorded at fair value and changes in fair value are reflected in the consolidated statements of operations.

(d)

Short-term investments

Short-term investments comprise investments in guaranteed investment certificates due to mature within one year from the date of purchase and are recorded at fair value. Changes in fair value are reflected in the consolidated statements of operations.

(e)

Equipment

Equipment is recorded at cost and amortization begins when the asset is put into service. Amortization is recorded on a straight-line basis over five years for plant and field equipment, office furniture and equipment, research equipment and vehicles and over three years for computer hardware and software, and over the term of the lease for leasehold improvements.

(f)

Mineral property interests

Mineral property acquisition costs are capitalized and deferred until the mineral property to which they relate is placed into production, sold, allowed to lapse, or is determined to be impaired. These costs are amortized over the estimated life of the property following commencement of commercial production or will be written off or down if the property is sold, allowed to lapse, or is determined to be impaired.

Mineral property acquisition costs include cash costs and the fair value of common shares, based on the trading price of the shares, issued for mineral property interests pursuant to the terms of the related property agreement. Payments relating to a property acquired under an option or joint venture agreement, where payments are made at the sole discretion of the Company, are recorded as mineral property costs upon payment.

Management reviews the carrying value of mineral properties whenever events or circumstances indicate they may be impaired by comparing the carrying value to the estimated undiscounted future cash flows resulting from the use of the mineral properties and their eventual disposition. If impairment is indicated, an impairment loss is recorded, calculated as the amount by which the carrying amount of the mineral property exceeds the estimated discounted future cash flows from the asset.

Although the Company has taken steps to verify title to mineral properties in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee a clear title. Property title may be subject to unregistered prior agreements and regulatory requirements. The Company is not aware of any disputed claims of title.

Administrative, property investigation, and exploration expenditures are expensed in the period incurred.

(g)

Exploration and development costs

Exploration and development expenditures are expensed until the Company has determined that the property is economically viable and a production decision is made.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005
(Expressed in United States dollars)

(h)

Ceramics technology research and development costs

Research costs are expensed as incurred. Development costs are deferred to the extent they meet Canadian generally accepted accounting principles criteria for deferral and subsequent amortization. The Company reassesses whether it has met the relevant criteria for continued deferral and amortization at each reporting date.

(i)

Option and royalty agreements

Option payments and certain royalties are made at the discretion of the optionee and, accordingly, are accounted for on a cash basis. Option payments received are treated as a reduction of the carrying value of the related mineral property until the Company's option and royalty payments received are in excess of costs incurred and then are credited to operations.

(j)

Translation of foreign currencies

Balances denominated in currencies other than the U.S. dollar and the financial statements of integrated foreign operations are translated into U.S. dollars using the temporal method. Under this method, monetary items are translated at the rate of exchange in effect at the period-end. Non-monetary items are translated at historical exchange rates. Revenue and expense items are translated at the average exchange rates prevailing during the period, except for depreciation and amortization, which are translated at the same exchange rates as the assets to which they relate. Exchange gains and losses are included in net income in the current period.

(k)

Flow-through common shares

Under the Canadian Income Tax Act, an enterprise may issue securities referred to as flow-through shares. These instruments permit the enterprise to renounce, or transfer to the investor the tax deductions associated with an equal amount of qualifying resource expenditures. In accordance with Canadian Institute of Chartered Accountants (CICA) Handbook Section 3465 *Income Taxes*, and Emerging Issues Committee Abstract 146 *Flow-through shares*, the Company records a future income tax liability on the date that the Company files the renouncement documents with the tax authorities, provided that there is reasonable assurance that the expenditures will be made. At the time of recognition of the future income tax liability, an offsetting reduction to share capital is made.

(l)

Income taxes

Future income taxes are calculated using the asset and liability method. Temporary differences arising from the difference between the tax basis of an asset or liability and its carrying amount on the balance sheet are used to calculate future income tax liabilities or assets. Future income tax liabilities or assets are calculated using the substantively enacted tax rates anticipated to apply in the periods that the temporary differences are expected to reverse. If realization of future income tax assets is not considered more likely than not, a valuation allowance is provided.

(m)

Asset retirement obligations

Asset retirement obligations are recognized when a legal obligation arises. This liability is recognized at the fair value of the asset retirement obligation. When the liability is initially recorded the Company capitalizes the cost by increasing the carrying amount of the related long-lived assets. Over time the liability is accreted to its present value each period, and the capitalized cost is amortized over the useful life of the related asset. Upon settlement of the liability, the Company either settles the obligation for its recorded amount or incurs a gain or loss upon settlement.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005
(Expressed in United States dollars)

(n)

Loss per common share

The Company follows the treasury stock method in the calculation of diluted earnings per share. The treasury stock method is a method of recognizing the use of proceeds that could be obtained upon exercise of options and warrants in computing diluted earnings per share. It assumes that any proceeds would be used to purchase common shares at the average market price during the period. Since the Company has losses, the exercise of outstanding options, warrants and potential conversion of preference shares has not been included in the calculation as increasing the number of shares outstanding would be anti-dilutive.

(o)

Stock-based compensation

The Company recognizes stock compensation expense based on the estimated fair value of the options on the date of grant, determined using the Black-Scholes option-pricing model. The fair value of the options is recognized over the vesting period of the options granted as both stock compensation expense and contributed surplus. Proceeds arising from the exercise of options are credited to share capital.

(p)

Recent accounting pronouncements

Recent accounting pronouncements issued which may affect the Company in the future are as follows:

Capital disclosures

CICA handbook section 1535, *Capital Disclosures*, establishes standards for disclosing information about the Company's capital and how it is managed.

This standard is effective for interim and annual financial statements beginning on or after October 1, 2007. The Company is currently evaluating the impact of adoption of this new standard on the disclosures in the consolidated financial statements.

Financial instruments disclosures

In February 2007, the CICA issued handbook section 3862, *Financial Instruments Disclosure* and section 3863 *Financial Instruments Presentation* which are effective for fiscal years beginning on or after October 1, 2007. CICA handbook section 3862, *Financial Instruments Disclosures*, requires entities to provide disclosure of quantitative and qualitative information in their financial statements. This information enables users to evaluate the significance of financial instruments on the Company's operations and the nature and extent of risks arising from financial instruments to which the Company is exposed during the period and at the balance sheet date. The Company will be required to disclose the measurement bases used for its financial instruments as well as the criteria used to determine the classification for different types of instruments.

The purpose of CICA handbook section 3863 *Financial Instruments Presentation* is to enhance the financial statement users' understanding of the significance of financial instruments to the Company's financial position, performance and cash flows.

The Company is currently evaluating and determined the impact of the adoption of these changes on the disclosure in the consolidated financial statements.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

General standards on financial statement presentation

CICA handbook section 1400, *General Standards on Financial Statement Presentation*, has been amended to include requirements to assess and disclose a Company's ability to continue as a going concern. The changes are effective for interim and annual financial statements beginning January 1, 2008. The Company is currently evaluating and determined the impact of the adoption of these changes on the disclosure in the consolidated financial statements.

Goodwill and intangible assets

CICA handbook section 3064, *Goodwill and intangible assets*, establishes revised standards for recognition, measurement, presentation and disclosure of goodwill and intangible assets by profit-oriented enterprises. The effective date of this new standard applies to fiscal years beginning January 1, 2009. The Company is currently evaluating and determined the impact of the adoption of these changes on the disclosure in the consolidated financial statements.

3.

Change in accounting policies

(a) Financial instruments

Effective January 1, 2007, the Company has adopted new CICA handbook sections 3855 *Financial Instruments Recognition and Measurement* and 3861 *Financial Instruments Disclosure and Presentation*.

Under the new standards, policies followed for periods prior to the effective date generally are not reversed and therefore, the comparative figures have not been restated except as indicated in part (c) below. The adoption of these handbook sections had no impact on opening retained earnings.

Under Section 3855, financial instruments must be classified into one of five categories: held-for-trading, held-to-maturity, loans and receivables, available-for-sale financial assets or other financial liabilities. All financial instruments, including derivatives, are measured in the balance sheet at fair value except for loans and receivables, held-to-maturity investments and other financial liabilities which are measured at amortized cost. Subsequent measurement and changes in fair value will depend on their initial classification, as follows: held-for-trading financial assets are measured at fair value and changes in fair value are recognized in net income; available-for-sale financial instruments are measured at fair value with changes in fair value recorded in other comprehensive income until the investment is derecognized or impaired at which time the amounts would be recorded in net income.

Upon adoption of these new standards, the Company designated its cash and cash equivalents and short-term investments as held-for-trading, which are measured at fair value.

Accounts receivable, amounts due from related parties and deposits are classified as loans and receivables, which are measured at amortized cost. Accounts payable, accrued liabilities, amounts due to related parties and convertible preference shares, are classified as other financial liabilities and are measured at amortized cost.

(b)

Hedges

Effective January 1, 2007, the Company has adopted the new CICA handbook section 3865 Hedges . The Company has not previously undertaken hedging activities and thus the adoption of this section has no impact on the consolidated financial statements.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

(c)

Comprehensive income / (loss)

Effective January 1, 2007, the Company adopted the new CICA handbook section 1530 Comprehensive Income. Comprehensive income represents the change in net assets resulting from transactions, events and circumstances from sources other than shareholders and includes items that would normally be included in net income such as unrealized gains and losses on available-for-sale investments.

The Company's comparative statements were adjusted to reflect application of this section on the cumulative translation adjustment (CTA) balance. Effective January 1, 2007, losses previously recorded from the translation of the consolidated financial statements into United States dollars for reporting purposes are now presented as accumulated other comprehensive loss as a separate component of shareholders' equity in the consolidated balance sheets. Upon adoption of the new standards these losses were included in CTA as part of shareholders' equity. This resulted in an adjustment of \$577,456 to reclassify the CTA of \$577,456 at January 1, 2007 to accumulated other comprehensive income.

(b)

Ceramext™ Process

The Company signed an exclusive worldwide license agreement with Ceramext, LLC to develop and use the Ceramext™ process to convert mine tailings and other waste materials into ceramics.

Under the terms of the agreement, the Company has obtained the worldwide rights, subject to a monthly royalty of 3.0% of the gross sales revenue derived from the sales of physical products produced. The worldwide rights will remain in force based upon maintaining the following minimum royalty payments: \$5,000 per quarter in 2005 (paid); \$10,000 per quarter in 2006 (paid); \$20,000 per quarter in 2007 (paid); and \$40,000 per quarter thereafter.

(c)

Mineral property interests

The acquisition costs of the Company's interest in mineral properties owned or under option, consist of the following:

Mineral property acquisition costs	December 31, 2007	December 31, 2006
Idaho-Maryland Property, California	\$	\$
	589,276	589,276
Porph Claims, British Columbia	6,910	6,910
Rozan Gold Property, British Columbia	120,821	120,726
Jazz Property, British Columbia	55,169	31,828
Stewart Property, British Columbia	170,272	161,932
	\$	\$
	942,448	910,672

Idaho-Maryland Property, California

In fiscal 2002, the Company renegotiated a lease with the owners of the Idaho-Maryland Property and surrounding areas in the Grass Valley Mining District, California. All acquisition and exploration costs relating to the Idaho-Maryland Property were written off in fiscal 1999 and exploration costs on the property have been expensed since that date.

The term of the initial amended lease was for a period of five years, commencing on June 1, 2002, and ending on May 31, 2007. The owners granted to the Company the exclusive right and option to purchase all of the leased property. The property is subject to a 3% Net Smelter Royalty (NSR) from production if the property is still being leased. Any royalty payments made prior to exercising the purchase option may be deducted from the purchase price. Lease payments of \$25,500 were payable quarterly commencing May 1, 2004 and continuing until February 1, 2007, as amended. In February 2007, for a one-time payment of \$75,000 the Company negotiated an extension to the initial amended lease, whereby the term of the exercise date was extended from May 31, 2007 to December 31, 2008. The Company agreed to a quarterly lease payment of \$75,000 beginning on May 1, 2007, and continuing for the term of the revised lease. All other conditions of the original agreement, including the option purchase price and NSR remain unchanged.

Provided that payments are kept current, the Company may purchase the property at any time. The purchase price for 2007 was \$5,042,880, and is increased by 3% each lease-year.

Porph Claims, British Columbia

The Company has staked six claims contiguous to the Stewart Property located near Nelson in south-eastern British Columbia.

Rozan Gold Property, British Columbia

In 2000, the Company entered into an option agreement to acquire the rights to the Rozan Gold Property, a prospect located south of the community of Nelson in the Red Mountain area of south-eastern British Columbia. The Company earned a 100% interest in the property by making stepped payments totalling Cdn\$100,000 and issuing 200,000 common shares. The property is subject to a 3.0% NSR. The Company has the right to purchase 66 % of the royalty for the sum of Cdn\$1,000,000 and has the first right of refusal to purchase the remaining 33 %.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005
(Expressed in United States dollars)

Jazz Property, British Columbia

In April 2004, the Company entered into an option agreement to acquire a 100% interest in the Jazz Property consisting of 24 mineral claims located in the Nelson Mining Division near Nelson, British Columbia. Under the terms of the agreement, the Company has agreed to make stepped cash payments totalling \$215,000 (\$45,000 paid to date) to the optionor over a ten-year period. Upon completion of the above cash payments, the Company will earn the exclusive right and option to earn 100% interest in the property, subject only to the payment to the optionor of a 3.0% NSR and the completion of Cdn\$75,000 in exploration work on the property within two years from the date of the agreement (completed). The Company will have the right to purchase 66 % of the NSR from the optionor for \$1,000,000 at any time up to and including the commencement of commercial production.

Stewart Property, British Columbia

Pursuant to an option agreement entered into in 2001 and amended in 2006, the Company acquired the rights to the Stewart mineral claims, a prospect located close to Nelson in south eastern British Columbia. The Company may earn a 100% interest in the property by making payments totalling Cdn\$104,000 (Cdn\$80,000 paid to date) and issuing 260,000 common shares (issued). The Company is vested with 100% right, title and interest in and to the property, subject only to a 3% NSR payable to the optioners. The Company has the right to purchase 66 % of the royalty for the sum of Cdn\$1,000,000 and has the first right of refusal to purchase the remaining 33 %.

5.

Capital lease obligation

The Company leases a vehicle under a capital lease which expires in 2012 and bears simple interest at a rate of 8.69%. At December 31, 2007, future minimum lease payments under capital leases are \$38,309, including \$6,805 of anticipated interest payments, payable at \$697 monthly.

Payments under capital lease included above are:

Years ending December 31,	\$
2008	8,358
2009	8,358
2010	8,358
2011	8,358
2012	4,877
Total minimum payments	38,309
Less interest	(6,805)
Capital lease obligation	31,504
Less: current portion	(5,843)
Non-current portion	25,661

6.

Share capital

Authorized

Unlimited number of common shares without par value.

Unlimited number of preference shares without par value.

a) Common shares, issued and fully paid

2007

During the year ended December 31, 2007, the Company completed a private placement of 72,730,236 units at a price of Cdn \$0.11 per unit, for gross proceeds of Cdn \$8 million (USD \$8 million). Each unit was comprised of one fully paid and non-assessable common share of the Company and one transferable common share purchase warrant. Each warrant entitles the holder to subscribe for one additional previously unissued common share (a warrant share) in the capital of the Company for a period of 24 months following the date of issue at an exercise price of Cdn\$0.15 per warrant share. The share purchase warrants issued in three tranches of 54,454,069 on September 27, 2007, 7,266,000 on October 5, 2007 and 11,010,167 on October 12, 2007 and were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate ranging from 4.2% - 4.4%, volatility factors ranging from 67% - 68% and an expected life of two years. The value attributable to the transferable common share purchase warrants was Cdn\$0.03 per warrant. Fees and costs of \$685,000 associated with the private placement including finders' fees were netted against gross proceeds with approximately \$518,000 allocated to the non-assessable common shares and \$167,000 allocated to the transferable common share purchase warrants based on their relative values at the issuance dates.

Finders' fees to eligible finders (the Finders') were paid amounts equal to 8% of proceeds raised by such Finders, and non-transferable warrants (the Finders' Warrants), equal to 8% of the number of units sold by such finders were also issued. Each of the Finders' Warrants are exercisable to acquire a unit of the Company (the Finders' Units) at a price of Cdn\$0.11 per Finders' Unit for a period of 18 months from the date of issuance. Each Finders' Unit is comprised of one common share of the Company and one non-transferable common share purchase warrant of the Company exercisable to acquire one additional common share of the Company for a period of 24 months from the date of issuance of the Finders' Warrant at a price of Cdn\$0.15. At December 31, 2007, 4,981,803 Finders' Warrants and Finders' Units were issued. The Finders' Warrants and Finders' Units were issued in three tranches of 3,831,323 on September 27, 2007, 508,080 on October 5, 2007 and 642,400 on October 12, 2007 and were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate ranging from 4.2% - 4.4%, volatility factors ranging from 58% - 61% and an average expected life of 18 months. The value attributable to these Finders' Units and Finders' Warrants was Cdn \$0.03 per Finders' Unit and Finders' Warrant.

2006

During the year ended December 31, 2006, the Company completed a private placement of 1,426,202 units at a price of Cdn\$0.60 per unit, for gross proceeds of Cdn\$855,721 (USD \$764,651). Each unit was comprised of one common share and one-half of one non-transferable share purchase warrant. Each whole share purchase warrant will entitle the holder to purchase one additional common share for a period of 24 months from issue, at an exercise price of Cdn\$1.00 per share. The share purchase warrants were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate of 4.1%; volatility factor

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

of 74%; and an average expected life of two years. The value attributed to these non-transferable share purchase warrants was Cdn\$0.11 per warrant.

The Company also completed a brokered private placement of 14,344,105 units at a price of Cdn\$0.26 per unit. Each unit was comprised of one common share and one share purchase warrant. Each share purchase warrant will entitle the holder to purchase one additional common share at an exercise price of Cdn\$0.40 per common share until December 6, 2008. The value attributed to these non-transferable share purchase warrants was Cdn\$0.07 per warrant.

The Company issued an aggregate of 1,147,529 compensation warrants exercisable until December 6, 2008, at a price of Cdn\$0.26 per warrant, for which the warrant holder will receive one common share and a warrant exercisable at Cdn\$0.40 until December 6, 2008. In addition, the Company paid an aggregate of approximately Cdn\$345,000 in fees to the agent and certain finders in connection with this transaction and the issuance of flow-through shares described below. The total value attributed to each of the compensation share purchase warrants on the non flow-through shares was Cdn\$0.25. The share purchase warrants and compensation warrants were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate of 3.8%; volatility factor of 73%; and an average expected life of the warrants of two years.

In addition, during 2006 the Company completed a brokered private placement of 2,238,000 flow-through units (the FT Units) at a price of Cdn\$0.38 per FT Unit for gross proceeds of Cdn\$850,440 (USD \$729,741). Each FT Unit is comprised of one (1) flow-through common share (FTS) and one-half of one non-flow-through share purchase warrant. Each whole share purchase warrant entitles the holder to purchase one additional common share at an exercise price of Cdn\$0.50 per share until December 6, 2008. The share purchase warrants were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate of 3.8%; volatility factor of 73%; and an average expected life of the warrants of two years. Commissions of 8% were paid with respect to the financing. The gross proceeds value attributed to the non-transferable share purchase warrants on the FTS was Cdn\$0.05 per warrant. No FTS expenditures were renounced at December 31, 2006. The Company renounced flow-through expenditures in March 2007 relating to the year ended December 31, 2006. The Company issued an aggregate of 179,040 compensation warrants exercisable until December 6, 2008, at a price of Cdn\$0.26 per warrant, for which the warrant holder will receive one common share and one half-warrant exercisable at Cdn\$0.50 until December 6, 2008. The total value attributed to each of the compensation share purchase warrants was Cdn\$0.23. The compensation share purchase warrants were valued using a Black-Scholes pricing model using the following assumptions: weighted average risk free interest rate of 3.9%, volatility factor of 73% and an average expected life of two years.

b) Preference shares, issued

	Number of Shares	Amount
Equity portion of Class A Convertible Preference Shares, December 31, 2007 and 2006	3,948,428 \$	
		90,902
	December 31, 2007	December 31, 2006

	123,900	12,853
Balance, end of year	\$	\$
	750,624	626,724

During fiscal 2003, the Company entered into an agreement to issue 3,948,428 Class A Convertible Preference Shares in full satisfaction of an aggregate Cdn\$789,686 of indebtedness owing to related parties.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

The Class A Convertible Preference Shares have no fixed term, rank in priority to the Company's common shares and are entitled to fixed cumulative preferential dividends at a rate of 7% per annum. The shares are redeemable by the Company at any time after 30 days written notice at a redemption price of Cdn\$0.20 per share, but are redeemable by the holder only out of funds available that are not, in the Company's opinion, otherwise required for the development of the Company's mineral property interests or to maintain a minimum of Cdn\$2,000,000 in working capital.

The Class A Convertible Preference Shares are convertible, at the option of the holder, into common shares at any time at a ratio of one common share for every four Class A Convertible Preference Shares. The Preference Shares also have attached a gold redemption feature by which holders may elect at the time of any proposed redemption to receive gold valued at \$300 per ounce in lieu of cash, provided the Company has on hand at the time, gold having an aggregate value of not less than the redemption amount.

The value of the convertible preference shares was split into a debt component and an equity component. This resulted in \$90,902 being included in equity. The debt portion of the preference shares fluctuates due to both accretion and fluctuations in the Canadian to U.S. dollar exchange rate. At December 31, 2007, \$284,146 (December 31, 2006 - \$194,148) has been accrued in due to related parties in relation to the 7% fixed cumulative preferential dividends. Dividends payable on the preference shares are recorded when they are declared by the Board of Directors, but will remain unpaid until the Company has the resources to do so. The debt portion of the convertible preference shares is being accreted over ten years from inception. This period is based on management's best estimate of the life of the convertible preference shares, and is reassessed annually.

c) Stock options

The Company has a rolling stock option plan for its directors and employees to acquire common shares of the Company at a price determined by the fair market value of the shares at the date of grant. The maximum aggregate number of common shares reserved for issuance pursuant to the plan is 10% of the issued and outstanding common shares at December 31, 2007. The stock options currently outstanding are exercisable for periods up to ten years from the date of grant.

The following table summarizes stock option transactions for the years ended December 31, 2005, 2006, and 2007:

	Shares	Weighted Average Exercise Price (Cdn\$)
Balance, December 31, 2004	6,114,000	\$0.84
Exercised	(20,000)	\$0.25
Cancelled	(50,000)	\$1.00
Granted	260,000	\$0.36
Balance, December 31, 2005	6,304,000	\$0.82

Balance, December 31, 2007	13,698,000	\$0.41

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

The following table summarizes information about the stock options outstanding at December 31, 2007:

Exercise Price	Number Outstanding and Exercisable at December 31, 2007	Weighted Average Remaining Contractual Life
Cdn\$0.25	170,000	1.40 years
Cdn\$0.10	428,000	3.78 years
Cdn\$1.00	2,460,000	5.77 years
Cdn\$0.90	1,770,000	6.44 years
Cdn\$0.36	160,000	2.49 years
Cdn\$0.29	820,000	3.90 years
Cdn\$0.15	7,890,000	4.95 years
	13,698,000	5.10 years

For the year ended December 31, 2007, the Company incurred stock-based compensation expense of \$559,337 (2006 - \$107,462; 2005 - \$190,326). A portion of the expense is included in note 15 – Ceramext™ Research Costs and in note 16 – Exploration Costs.

The fair value of each stock option granted is estimated on the date of grant using the Black-Scholes option valuation model with weighted average assumptions as follows:

	Years ended December 31,		
	2007	2006	2005
Risk free interest rate	3.71%	3.84%	3.10%
Expected life (years)	5	3	3
Expected volatility	70%	75%	67% - 88%

Weighted average fair value per option grant	\$0.07	\$0.13	\$0.17 - \$0.82
--	--------	--------	-----------------

The Black-Scholes option valuation model was developed for use in estimating the fair value of traded options that are fully transferable and have no vesting restrictions. The Company's stock options are not transferable and cannot be traded, thus the Black-Scholes model may over-estimate the actual value of the options that the Company has granted. The Black-Scholes model also requires an estimate of expected volatility. The Company uses historical volatility rates of the Company to arrive at an estimate of expected volatility. Changes in the subjective input assumptions can impact the fair value estimate.

7.

Income taxes

The recovery of income taxes shown in the consolidated Statements of Operations and Deficit differs from the amounts computed by applying cumulative Canadian federal and provincial tax rates to the loss before tax provision due to the following:

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

	Years ended December 31,		
	2007	2006	2005
Statutory tax rate	34.12%	34.12%	34.87%
Loss for the year	\$	\$	\$
	(6,057,863)	(5,124,327)	(5,245,165)
Expected tax recovery	(2,066,943)	(1,748,420)	(1,828,989)
Non-deductible amounts	233,519	(157,960)	197,013
Effect of change in rates on future tax	1,851,012	437,429	--
Differences in foreign tax rates	(1,307,583)	(384,690)	(205,346)
Differences in foreign exchange rates	(922,063)	--	--
Change in valuation allowance	2,116,454	1,501,984	1,837,322
Expiry of tax losses and other	(126,130)	351,657	--
	\$	\$	\$
	(221,734)	--	--

The significant components of the Company's future tax assets are as follows:

	December 31, 2007	December 31, 2006
Future income tax assets		
Operating and capital losses carried forward	\$	\$
	6,633,563	5,146,490
Mineral property interests and research costs representing excess of tax basis over carrying value	8,114,809	7,541,634
Share issuance costs	321,543	265,337
	15,069,915	12,953,461
Valuation allowance for future tax assets	(15,069,915)	(12,953,461)

\$

\$

--

--

The realization of income tax benefits related to these future potential tax deductions is uncertain and cannot be viewed as more likely than not. Accordingly, a full valuation allowance has been applied against the carrying value of future income tax assets for accounting purposes.

The Company has a capital loss carried forward of Cdn\$111,175 with no expiry date, but that may only be used to offset future capital gains. Additionally, the Company has non-capital losses carried forward of Cdn\$8,530,464 that may be available for Canadian tax purposes. The Company also has non-capital losses carried forward of \$10,516,477 that may be available for United States (US) tax purposes. The US tax losses may be subject to a restriction on usage if the Company is deemed to have experienced a change in ownership. The losses expire as follows:

	\$
	8,530,464

Under the flow-through share agreements as described in note 6a, the Company agreed to renounce Cdn \$850,440 of qualifying expenditures to the investors effective December 31, 2006. In accordance with CICA handbook section 3465 Income Taxes, the Company recorded a future income tax liability at the time of the actual renunciation, with an offsetting reduction in the amount included in share capital relating to the FTS, for the future income taxes related to the deductions foregone by the Company. The Company renounced flow-through expenditures in the year ended December 31, 2007, and as a consequence, recognized a reduction in share capital and a future income tax liability of \$221,734. Recognition of the liability resulted in a reduction of previously applied valuation allowances and a corresponding future income tax recovery of \$221,734 in the consolidated statements of operations.

8.

Related party transactions and balances

Balances receivable from:	December 31, 2007	December 31, 2006
LMC Management Services Ltd.	\$ 100,493	\$ 235,410
Balances payable to:		
Directors, officers and employees	\$ 386,369	\$ 195,483

Related party transactions reflected in these consolidated financial statements are as follows:

(a)

In the year ended December 31, 2007, \$1,040,124 (2006 - \$827,056; 2005 - \$649,271) in management, administrative, geological and other services have been provided by LMC Management Services Ltd. (LMC), a private company held jointly by the Company and other public companies, to provide services on a full cost recovery basis to the various public entities currently sharing office space with the Company. Currently, the Company has a 25% interest in LMC valued at \$1. There is no difference between the cost of the investment in LMC of \$1 and equity value, as LMC does not retain any profits in connection with the services it provides. Under the terms of the service agreement, three months of estimated working capital is required to be on deposit with LMC under the terms of the services agreement.

(b)

Legal fees of \$Nil (2006 - \$Nil; 2005 - \$34,625) were paid to a law firm of which a director, Sargent H. Berner, was an associate to April 1, 2006.

(c)

Bonus payments totaling \$28,056 (2006 \$Nil; 2005 \$Nil) were paid directly to Kent Avenue Consulting Ltd., a private company controlled by a director, Sargent H. Berner; 759924 Ontario Ltd., a private

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005

(Expressed in United States dollars)

company controlled by a director, Kenneth Yurichuk; and to two directors of the Company. These amounts were included in office and administration expenses.

(d)

Consulting fees of \$49,430 (2006 \$Nil; 2005 \$Nil) were paid directly to 759924 Ontario Ltd., a private company controlled by a director, Kenneth Yurichuk.

(e)

Consulting fees of \$58,566 (2006 \$33,353; 2005 \$6,393) were paid indirectly by the Company through LMC to Kent Avenue Consulting Ltd., a private company controlled by a director, Sargent H. Berner.

(f)

Directors fees totaling \$20,057 (2006 \$Nil; 2005 \$Nil) were also paid to two independent directors of the Company which were included in salaries and benefits.

(g)

Lang Mining Corporation (Lang Mining) is a private company controlled by Frank A. Lang, a significant shareholder of the Company. Commencing January 1, 2003, and expiring June 30, 2006, the Company paid Cdn\$2,500 per month to Lang Mining for his services during his tenure as chairman of the Company. The Company appointed a new chairman in June 2005, and approved a one-year extension of payments to the Lang Mining contract. Mr. Lang and Lang Mining are the holders of preference shares, which are fully described in Note 6 (b).

(h)

Related party balances are non-interest bearing and are due on demand, with no fixed terms of repayment, except for preference shares, which are described in Note 6(b). Transactions with related parties are recorded at the exchange amount, being the price agreed between the parties.

9.

Financial instruments

(a)

Current assets and liabilities

The carrying values of accounts receivable, deposits, amounts due to/from related parties, accrued liabilities, accounts payable, and the current portion of capital lease obligations approximates their fair value, except for dividends payable on preference shares, due to the immediate or short-term maturity of the financial instruments.

Given the uncertainty of the timing of the payment of dividends accrued on preference shares, it is not possible to determine the fair value of this balance.

(b)

Non-current items

The Company's non-current financial instruments comprise the debt component of preference shares and the non-current portion of capital lease obligations. The preference shares are not traded on any public market. The fair value of the preference shares is dependent on many factors including interest rates, the price of gold, and the market value of the Company's common shares. As a result of these indirect influences, the fair value of the components of the preference shares is difficult to determine. Based upon an analysis of discounted cash flows, the fair value of the debt component is estimated at approximately \$751,000 at December 31, 2007. The debt component of preference shares, however, is being accreted from the initial discounted value to the full value over a ten-year period ending in 2013 (See Note 6 (b)).

10.

Commitments

The Company has a lease and option to purchase agreement for a 44,750 square foot building located in Grass Valley, California. Minimum monthly lease payments are \$21,928 effective April 1, 2007, to be adjusted by the Cost of Living Adjustment for all urban consumers in the San Francisco-Oakland area, annually up to and including April 1, 2010. The purchase price, if exercised in fiscal 2008, is \$3.05 million, increasing by \$50,000 annually to the end of fiscal 2009, with an additional increase in 2010.

EMGOLD MINING CORPORATION

(an exploration stage company)

Notes to the Consolidated Financial Statements

Years ended December 31, 2007, 2006 and 2005
(Expressed in United States dollars)

See notes 4 (b), 4 (c), and 6 (b) for further commitments.

12.**Segmented information**

The Company has two operating segments: the exploration and development of mineral properties, and the research and development of the Ceramext™ technology. In late 2006, the expenditures on the Ceramext™ technology have been

reduced to a care and maintenance level due to the focus on development of the Idaho-Maryland Property.

The Company's principal operations are in Canada and the United States of America. All of the investment income is earned in Canada.

Segmented assets and loss by operating segment are as follows:

Risk Management

The Company is exposed to potential loss from various risks including currency risk, interest rate risk, liquidity risk, market risk and commodity price risk.

Currency risk

The Company is exposed to currency risk which is the possibility that changes in exchange rates produce an unintended effect on net income and shareholders' equity when measured in other than the measurement currency of the Company. The Company holds certain cash and cash equivalents, short-term investments, accounts receivable, accounts payable and accrued liabilities, due to / from related parties and preference shares in Canadian dollars. The Company monitors exposure of invested assets to foreign exchange and limits these amounts. The Company may from time to time, experience losses resulting from fluctuations in the values of the Canadian dollar, which could adversely affect operating results.

Interest rate risk

The Company is exposed to interest rate risk on its cash and cash equivalents and short-term investments. Generally, the Company's interest income will be reduced during sustained periods of lower interest rates as higher yielding cash equivalents and short-term investments mature and the proceeds are invested at lower interest rates.

Liquidity risk

The Company is exposed to liquidity risk which is the risk that an entity will encounter difficulty in raising funds to meet cash flow commitments associated with financial instruments. The Company manages liquidity risk by maintaining sufficient cash and short-term investment balances for settlement of its obligations. Liquidity requirements are managed based on expected cash flow to ensure there is sufficient capital in order to meet short-term obligations.

Market risk and commodity price risk

Market risk is the risk of loss arising from adverse changes in market rates and prices. The significant market risk exposure to the Company relates to commodity price risk and specifically declines in the price of gold. The Company's ability to raise capital to fund exploration or development activities is subject to risks associated with fluctuations in the market prices of gold associated with the Company's mineral property interests.

Differences between Canadian and U.S. GAAP, as they may affect the Company's consolidated financial statements are as follows:

(a)

Conditionally redeemable preference shares

Under U.S. GAAP, the preference shares are recorded entirely as equity, as the preference shares are not mandatorily redeemable at a specified or determinable date or upon an event that is certain to occur. The foreign currency gain or loss and accretion related to the debt portion of the preference shares recognized under Canadian GAAP is eliminated under U.S. GAAP as preference shares are classified entirely as equity under U.S. GAAP. In addition, dividends declared on the preference shares, recorded as finance expenses under Canadian GAAP are eliminated from the consolidated statements of operations under U.S. GAAP as the

(Expressed in United States dollars)

dividends declared would be recorded as an adjustment to retained earnings in the consolidated statements of shareholders equity. This adjustment has no impact on total shareholders equity.

(b)

Flow-through shares

As described in note 2(k) to the consolidated financial statements, on issuance of flow-through shares, the entire proceeds of the issuance are recorded as share capital. The Company subsequently records a future income tax liability, and a reduction in share capital, on the date that the Company files the renouncement documents with the tax authorities. In 2006, the Company issued by way of private placement 2,238,000 flow-through common shares at Cdn\$0.38 per share. The gross proceeds of this placement are considered to be restricted cash for U.S. GAAP purposes, as these funds are to be expended on exploration in Canada in order to satisfy the requirements of the renouncement to the investors. At December 31, 2006 this amount totalled \$729,741. The Company received a net premium to market on this issuance of \$136,499, which was recorded in share capital as part of the transaction. For U.S. GAAP purposes, SFAS 109 *Accounting for Income Taxes* (SFAS 109) indicates that the proceeds of flow-through share offerings should be allocated between the offering of the shares and the sale of tax benefits when the shares are offered. The allocation is made based on the difference between the quoted price of the shares and the amount the investor pays for the flow-through shares. A liability is initially recognized for any premium paid by the investors.

Upon renouncing the income tax deductions the Company records a future income tax liability of \$221,734 and a corresponding reduction of share capital in respect of the flow-through share financing for Canadian GAAP purposes.

Under U.S. GAAP, the difference between the future income tax liability on renunciation and the premium is recorded as a future income tax expense. Under both Canadian and U.S. GAAP, recognition of the liability results in a reduction of previously applied valuation allowance and a corresponding future tax recovery in the consolidated statements of operations. This results in a U.S. GAAP adjustment of \$85,235 representing the difference between the recovery under Canadian GAAP and the net premium to market on issuance recorded in 2006 under U.S. GAAP allocated to deferred taxes when the flow-through shares were issued.

(c)

Impact of recent applicable United States accounting pronouncements and current differences in accounting principles

Share purchase warrants

The Securities and Exchange Commission (SEC) and the Financial Accounting Standards Board (FASB) have expressed views for U.S. GAAP that suggest warrants with an exercise price denominated in a currency that is different from the entity's functional currency cannot be classified as equity. As a result, these instruments would be treated as derivatives and recorded as liabilities carried at their fair value, with changes in the fair value from period to period recorded as a gain or loss in the statement of operations. The Company's functional currency is the U.S. dollar and it has issued and outstanding warrants that have an exercise price that is denominated in Canadian dollars.

The recent SEC and FASB interpretations relate to SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, and Emerging Issue Task Force (EITF) 00-19 - *Accounting for Derivative Financial Instruments Indexed to and Potentially Settled in a Company's Own Stock*. The EITF has initiated a project to determine the accounting treatment for certain equity instruments with elements of foreign currency risk.

(Expressed in United States dollars)

In August 2007, the EITF issued No. 07-05, Issue Summary No.1 *Determining Whether an Instrument (or an Embedded Feature) is Indexed to an Entity's Own Stock*. The issue summary discusses the merits of various accounting treatments related to this issue but does not provide any definitive guidance. The EITF considers Issue 07-5 an open issue subject to further discussion and meetings. The Company is awaiting the results of the project and has therefore not recorded warrants outstanding that have an exercise price in Canadian dollars as derivatives. Accordingly, the issued and outstanding warrants continue to be classified in shareholders' equity at their historical issue price. Upon the issuance of authoritative guidance from the EITF project the Company will assess the impact this may have on the consolidated financial statements for U.S. GAAP and record an adjustment in accordance with the guidance provided.

Accounting for Uncertainty in Tax Positions.

In June 2006, the FASB issued FIN No. 48 *Accounting for Uncertainty in Tax Position, an Interpretation of FASB Statement No. 109* (FIN 48). FIN 48 addresses the recognition and measurement of all tax positions. The recognition process involves determining whether it is more likely than not that a tax position would be sustained on audit based solely on its technical merits. The amount of benefit recognized in the financial statements is the maximum amount which is more likely than not to be realized based on a cumulative probability approach. FIN 48 was effective for the Company on January 1, 2007 and did not have an impact on the Company's reported results.

Fair Value Measurements

In September 2006, FASB issued SFAS No. 157 *"Fair Value Measurements"* ("SFAS No.157"), effective for periods beginning after November 15, 2007. SFAS No. 157 defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurements. In December 2007, FASB issued SFAS 157-b, which provided for a one-year deferral of the implementation of SFAS No. 157 for non financial assets and liabilities. However, SFAS No.157 is still required to be adopted effective January 1, 2008, for financial assets and liabilities that are carried at fair value. The Company is currently evaluating the impact of the adoption of this standard on its consolidated financial statements.

In February 2007, FASB issued FASB Statement No. 159, *The Fair Value for Financial Assets and Financial Liabilities* including an amendment of FASB No. 115, which provides an option to elect to treat certain financial assets and liabilities on a fair value basis. This standard is effective for the Company's 2008 financial statements. The Company is currently evaluating the impact of the adoption of this standard on its consolidated financial statements.

Business Combinations

In December 2007, FASB issued *SFAS 141(R) "Business Combinations"* and *SFAS 160 "Non-controlling Interest in Consolidated Financial Statements"* which are both effective for fiscal years beginning after December 15, 2008. *SFAS 141(R)* which will replace *FAS 141* is applicable to business combinations consummated after the effective date of December 15, 2008.

Non-Controlling Interests

In December 2007, the FASB issued *SFAS 160* a standard on accounting for non-controlling interests and transactions with non-controlling interest holders in consolidated financial statements. This statement specifies that non-controlling interests are to be treated as a separate component on equity, not as a liability or other item outside of equity. Because non-controlling interests are an element of equity, increases and decreases in the parent company's ownership interest that leave control intact are accounted for as capital transactions rather than as a step acquisition or dilution of gains and losses. The carrying amount of non-controlling interests is adjusted to reflect the change in ownership interests, and any difference between the amount by which the non-controlling interests are adjusted and the fair value of the consideration paid or received is recognized directly in equity attributable to the controlling interest.

This standard requires net income and comprehensive income to be displayed for both the controlling and non-controlling interests. Additional required disclosures and reconciliations include a separate schedule that shows the effects of any transactions with the non-controlling interests on the equity attributable to the controlling interest.

The statement is effective for periods beginning on or after December 15, 2008. *SFAS 160* will be applied prospectively to all non-controlling interests, including those that arose before the effective date.

The Company does not believe the adoption of SFAS 160 will impact its consolidated financial statements for U.S. GAAP.
