

CELGENE CORP /DE/
Form 8-K
December 10, 2007

ITEM 8.01 OTHER EVENTS

On December 9, 2007, Celgene International Sarl announced that results from the Southwest Oncology Group, or SWOG, Phase III randomized, controlled trial evaluating REVLIMID® (lenalidomide) and the steroid dexamethasone were presented for the first time at the 49th annual American Society of Hematology, or ASH, meeting. The SWOG (S0232) study (Abstract #77) evaluated the combination therapy of REVLIMID® and dexamethasone in patients with newly diagnosed multiple myeloma and found that patients given the treatment regimen had superior response rates and progression-free survival compared to those who received dexamethasone alone.

Attached hereto and incorporated herein by reference as Exhibit 99.1 is the Press Release announcing such information.

ITEM 9.01 FINANCIAL STATEMENTS AND EXHIBITS.

(d) Exhibit 99.1 Press Release dated December 9, 2007
