UNITED STATES SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Form 10-Q

(Mark One)

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d)
OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended December 31, 2011

or

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15 (d)
OF THE SECURITIES EXCHANGE ACT OF 1934

Commission file number: 001-34814

Capitol Federal Financial, Inc.
(Exact name of registrant as specified in its charter)

Maryland 27-2631712 (I.R.S.
(State or other jurisdiction of incorporation Identification
or organization) No.)

700 Kansas Avenue, Topeka, Kansas 66603
(Address of principal executive offices) (Zip
Code)

Registrant's telephone number, including area code:
(785) 235-1341

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files.) Yes No

Edgar Filing: Capitol Federal Financial Inc - Form 10-Q

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definition of “accelerated filer, large accelerated filer, and smaller reporting company” in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller Reporting Company
(do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

As of January 30, 2012, there were 167,498,133 shares of Capitol Federal Financial, Inc. Common Stock outstanding.

Notes to Consolidated Financial Statements (Unaudited)

1. Summary of Significant Accounting Policies

Basis of Presentation - The accompanying consolidated financial statements of the Company have been prepared in accordance with accounting principles generally accepted in the United States of America ("GAAP") for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of Regulation S-X. Accordingly, they do not include all of the information and footnotes required by GAAP for complete financial statements. In the opinion of management, all adjustments (consisting of normal recurring adjustments) considered necessary for a fair presentation have been included. These statements should be read in conjunction with the consolidated financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the fiscal year ended September 30, 2011, filed with the Securities and Exchange Commission ("SEC"). Interim results are not necessarily indicative of results for a full year.

In preparing the financial statements, management is required to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and revenues and expenses during the reporting periods. The ACL is a significant estimate that involves a high degree of complexity and requires management to make difficult and subjective judgments and assumptions about highly uncertain matters. The use of different judgments and assumptions could cause reported results to differ significantly. In addition, bank regulators periodically review the Bank's ACL. The bank regulators have the authority to require the Bank, as they can require all banks, to increase the ACL or recognize additional charge-offs based upon their judgments, which may differ from management's judgments. Any increases in the ACL or recognition of additional charge-offs required by bank regulators could adversely affect the Company's financial condition and results of operations.

The consolidated financial statements include the accounts of the Company and its wholly-owned subsidiary, the Bank. The Bank has a wholly-owned subsidiary, Capitol Funds, Inc. Capitol Funds, Inc. has a wholly-owned subsidiary, Capitol Federal Mortgage Reinsurance Company. All intercompany accounts and transactions have been eliminated in consolidation.

Loans Receivable - Loans receivable that management has the intent and ability to hold for the foreseeable future are carried at the amount of unpaid principal, net of ACL, undisbursed loan funds, unamortized premiums and discounts, and deferred loan origination fees and costs. Net loan origination fees and costs and premiums and discounts are amortized as yield adjustments to interest income using the level-yield method, adjusted for the estimated prepayment speeds of the related loans when applicable. Interest on loans is credited to income as earned and accrued only if deemed collectible.

A loan is considered delinquent when payment has not been received within 30 days of its contractual due date. The accrual of income on loans is discontinued when interest or principal payments are 90 days in arrears. Loans on which the accrual of income has been discontinued are designated as non-accrual and impaired loans and outstanding interest previously credited beyond 90 days delinquent is reversed. A non-accrual loan is returned to accrual status once the contractual payments have been made to bring the loan less than 90 days past due.

Existing loan customers, whose loans have not been sold to third parties and who have not been delinquent on their contractual loan payments during the previous 12 months have the opportunity, for a fee, to endorse their original loan terms to current loan terms being offered. The fee assessed for endorsing the mortgage loan is deferred and amortized over the remaining life of the endorsed loan using the level-yield method and is reflected as an adjustment to interest income. Each endorsement is examined on a loan-by-loan basis and if the new loan terms represent more than a minor change to the loan, then the unamortized balance of the pre-endorsement deferred fees and/or costs associated

with the mortgage loan are recognized in interest income at the time of the endorsement. If the endorsement of terms does not represent more than a minor change to the loan, then the unamortized balance of the pre-endorsement deferred fees or costs continue to be deferred.

For borrowers experiencing financial difficulties, the Bank may grant a concession to the borrower. Generally, the Bank grants a short-term payment accommodation to borrowers who are experiencing a temporary cash flow problem. The most frequently used accommodation is to reduce the monthly payment amount for a period of six to 12 months, often by requiring payments of only interest and escrow during this period. These restructurings result in an extension of the maturity date of the loan. For more severe situations requiring long-term solutions, the Bank also offers interest rate reductions to currently-offered rates and more lengthy extensions of the maturity date. All such concessions are considered a troubled debt restructuring ("TDR"). The Bank does not forgive principal or interest nor does it commit to lend additional funds to debtors whose terms have been modified in TDRs.

A loan is considered impaired when, based on current information and events, it is probable that the Bank will be unable to collect all amounts due, including principal and interest, according to the contractual terms of the loan agreement. Interest income on impaired loans is recognized in the period collected unless the ultimate collection of principal is considered doubtful. Management considers the following loans to be impaired loans: all non-accrual loans, loans classified as substandard, loans with specific valuation allowances (“SVAs”), and TDRs that have not been performing under the new terms for 12 consecutive months or are required by the accounting literature to be classified as a TDR for the life of the loan due to a reduction in the stated interest rate to a rate lower than the current market rate for new debt with similar risk.

Allowance for Credit Losses - The ACL represents management’s best estimate of the amount of known and inherent losses in the loan portfolio as of the balance sheet date. Management’s methodology for assessing the appropriateness of the ACL consists of a formula analysis model and the establishment of SVAs for identified problem loans. Management maintains the ACL through provisions for credit losses that are charged to income.

For one- to four-family loans, losses are charged-off when a loan is transferred to REO or if there is a short-sale of the collateral. For consumer home equity loans where the Bank holds the first mortgage, if the loan balance is in excess of the fair value and the loan is in foreclosure, the difference between the loan balances and the fair value is charged-off. Estimated selling costs are also taken into consideration when calculating the amount to charge-off for home equity loans. For consumer home equity loans where the Bank does not hold the first mortgage, foreclosure is pursued or the loan balance is charged-off. Other consumer loans that are unsecured are entirely charged-off once the loan is 120 days past due. For multi-family and commercial loans, the Bank records an SVA when it is determined that the collection of all or a portion of a loan may not be collected and the amount of that loss is reasonably estimated.

As permitted by the Office of Thrift Supervision, the Bank had been establishing SVAs for potential loan loss amounts. Starting with the March 31, 2012 reporting period, the Bank will be required to file a Call Report with the Office of the Comptroller of the Currency (“OCC”). The OCC requirements do not permit SVAs; rather, loan charge-offs are required. Management will implement a loan charge-off policy during the second quarter of fiscal year 2012 in order to be in compliance with the OCC requirements. When the charge-off policy is implemented, all SVAs recorded at December 31, 2011, or \$3.5 million, will be charged off. This will not impact the provision for credit losses in the consolidated statements of income as the amounts were expensed in previous periods; however, it will reduce the ACL and related loan balances.

The Bank’s primary lending emphasis is the origination and purchase of one- to four-family first mortgage loans on residential properties and, to a lesser extent, second mortgage loans on one- to four-family residential properties, resulting in a loan concentration in residential mortgage loans. The Bank has a concentration of loans secured by residential property located in Kansas and Missouri. Based on the composition of the Bank’s loan portfolio, the primary risks inherent in the one- to four-family and consumer loan portfolios are the continued weakened economic conditions, continued high levels of unemployment or underemployment, and a continuing decline in residential real estate values. Any one or a combination of these events may adversely affect borrowers’ ability to repay their loans, resulting in increased delinquencies, non-performing assets, loan losses, and future loan loss provisions. Although the multi-family and commercial loan portfolio also shares the risk of continued weakened economic conditions, the primary risks for this portfolio include the ability of the borrower to sustain sufficient cash flows from leases and to control expenses to satisfy their contractual debt payments, and/or the ability to utilize personal and/or business resources to pay their contractual debt payments if the cash flows are not sufficient. Additionally, if the Bank were to repossess the secured collateral of a multi-family or commercial loan, the pool of potential buyers is limited more than that for a residential property, therefore, the Bank could hold the property for an extended period of time and/or potentially be forced to sell at a discounted price, resulting in additional losses.

Management considers several quantitative and qualitative factors quarterly while monitoring the credit quality of the loan portfolio and evaluating the adequacy of the ACL. Such factors include: the trend and composition of delinquent and non-performing loans; the results of foreclosed property and short-sale transactions (historical losses and net charge-offs); charge-offs and the establishment of and increase in SVAs; the current status and trends of local and national economies; the trends and current conditions in the residential real estate markets; and loan portfolio growth and concentrations.

The formula analysis model is updated each quarter. Within the formula analysis model, the loan portfolio is segregated into the following categories: one- to four-family loans; multi-family and commercial loans; consumer home equity loans; and other consumer loans. Home equity loans with the same underlying collateral as a one- to four-family loan are combined with the one- to four-family loan in the formula analysis model to calculate a

combined loan-to-value (“LTV”) ratio. Impaired loans are excluded from the formula analysis model as they are individually evaluated for impairment. The one- to four-family loan portfolio and related home equity loans are segregated into additional categories based on the following risk characteristics: originated or bulk purchased; interest payments (fixed-rate, adjustable-rate, and interest-only); LTV ratios; borrower’s credit scores; and geographic location. The categories were derived by management based on reviewing the historical performance of the one- to four-family loan portfolio and taking into consideration current economic conditions, such as trends in residential real estate values in certain areas of the U.S. and unemployment rates. The geographic location category pertains primarily to certain states in which the Bank has experienced measurable losses on REO and short-sales.

Quantitative loss factors are applied to each loan category in the formula analysis model based on the historical loss experience, which includes charge-offs and current SVAs, adjusted for loan delinquency trends, for each respective loan category. Each quarter, management reviews the historical loss time periods and utilizes the historical loss time periods believed to be the most reflective of the current economic conditions and recent charge-off experience for each respective loan category.

Qualitative loss factors are applied to each loan category in the formula analysis model. The qualitative factors for the one- to four-family and consumer loan portfolios are: unemployment rate trends; collateral value trends; credit score trends; and delinquent loan trends. The qualitative factors for the multi-family and commercial loan portfolio are: unemployment rate trends; collateral value trends; and delinquent loan trends. As loans are classified as special mention or become 30 to 89 days delinquent, the qualitative loss factors increase based upon delinquent loan trends. The qualitative factors were derived by management based on a review of the historical performance of the respective loan portfolios and consideration of current economic conditions and their likely impact to the loan portfolio.

SVAs have been established in connection with individual loan reviews of impaired loans. Since the majority of the Bank’s loan portfolio is composed of residential real estate, determining the estimated fair value of the underlying collateral is important in evaluating the amount of SVAs or charge-offs required for impaired one- to four-family loans. If the estimated fair value of the collateral, less estimated costs to sell and anticipated private mortgage insurance (“PMI”) proceeds, is less than the current loan balance, an SVA is established, or a charge-off recorded, for the difference. Once a purchased one- to four-family loan is 90 days delinquent, new collateral values are obtained through automated valuation models (“AVMs”) or broker price opinions (“BPOs”). An updated AVM or BPO is then requested approximately every six months while the loan is greater than 90 days delinquent. Due to the relatively stable home values in Kansas and Missouri, new appraisals on originated one- to four- family loans are not obtained until a loan enters foreclosure. For originated one- to four-family loans and home equity loans that are impaired and the most recent appraisal is more than one year old, management estimates the fair value of the collateral using the most recently published Federal Housing Finance Agency (“FHFA”) index. For those loans where the FHFA fair value estimate results in a value less than the outstanding loan balance, an updated appraisal is obtained and is used to establish the SVA or charge-off amount. If the Bank holds the first and second mortgage, both loans are combined when evaluating the need for an SVA or charge-off amount.

Loans with an outstanding balance of \$1.5 million or more are reviewed annually if secured by property in one of the following categories: multi-family (five or more units) property; unimproved land; other improved commercial property; acquisition and development of land projects; developed building lots; office building; single-use building; or retail building. Management may charge-off such losses if deemed appropriate.

Since the Bank’s loan portfolio is primarily concentrated in one- to four-family real estate, management monitors residential real estate market value trends in the Bank’s local market areas and geographic sections of the U.S. by reference to various industry and market reports, economic releases and surveys, and management’s general and specific knowledge of the real estate markets in which the Bank lends, in order to determine what impact, if any, such trends may have on the level of ACL. Reviewing these quantitative and qualitative factors assists management in

evaluating the overall credit quality of the loan portfolio and the reasonableness of the ACL on an ongoing basis, and whether changes need to be made to the Bank's ACL methodology.

Management seeks to apply the ACL methodology in a consistent manner; however, the methodology can be modified in response to changing conditions. During the current quarter, management increased the historical loss amounts in the formula analysis model related to purchased loans and changed the time periods used for certain qualitative loss factors in the formula analysis model to reflect more recent data trends. The increase in historical losses for purchased loans was due to management's plan to implement a charge-off policy during the quarter ended March 31, 2012, as discussed above. Prior to December 31, 2011, the SVAs on purchased loans were not included in their entirety in historical losses, rather, they were adjusted for delinquent loan trends. Starting with the current quarter, the SVAs on purchased loans were included in their entirety in the historical loss amounts.

Assessing the adequacy of the ACL is inherently subjective. Actual results could differ from estimates as a result of changes in economic or market conditions. Changes in estimates could result in a material change in the ACL. In the opinion of management, the ACL, when taken as a whole, is adequate to absorb estimated losses inherent in the loan portfolio. However, future adjustments may be necessary if loan portfolio performance or economic or market conditions differ substantially from the conditions that existed at the time of the initial determinations.

Recent Accounting Pronouncements - In December 2011, the Financial Accounting Standards Board (“FASB”) issued Accounting Standard Update (“ASU”) 2011-12, Comprehensive Income (Topic 220): Deferral of the Effective Date for Amendments to the Presentation of Reclassifications of Items Out of Accumulated Other Comprehensive Income in Accounting Standards Update No. 2011-05, which defers certain provisions of ASU 2011-05, Presentation of Comprehensive Income. One of ASU 2011-05’s provisions requires entities to present reclassification adjustments out of accumulated other comprehensive income by component in both the statement in which net income is presented and the statement in which other comprehensive income is presented (for both interim and annual financial statements). Accordingly, this requirement is indefinitely deferred by ASU 2011-12 and will be further deliberated by the FASB at a future date. ASUs 2011-05 and 2011-12 are effective for fiscal years, and interim periods within those years, beginning after December 15, 2011, which is October 1, 2012 for the Company, and should be applied retrospectively for all periods presented in the financial statements. The Company has not yet decided which statement format it will adopt.

In December 2011, the FASB issued ASU 2011-11, Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities. The ASU requires new disclosures regarding the nature of an entity’s rights of setoff and related arrangements associated with its financial instruments and derivative instruments. The new disclosures are designed to make GAAP financial statements more comparable to those prepared under International Financial Reporting Standards. The new disclosures entail presenting information about both gross and net exposures. The new disclosure requirements are effective for annual reporting periods beginning on or after January 1, 2013, which is October 1, 2013 for the Company, and interim periods therein; retrospective application is required. The Company has not yet completed its evaluation of this ASU; however, since the provisions of ASU 2011-11 are disclosure-related, the Company’s adoption of this ASU is not expected to have an impact to its financial condition or results of operations.

2. Earnings Per Share

The Company accounts for the shares acquired by its ESOP and the shares awarded pursuant to its RRP in accordance with Accounting Standards Codification (“ASC”) 260, which requires that unvested RRP awards that contain nonforfeitable rights to dividends be treated as participating securities in the computation of earnings per share pursuant to the two-class method. The two-class method is an earnings allocation that determines earnings per share for each class of common stock and participating security. Shares acquired by the ESOP are not considered in the basic average shares outstanding until the shares are committed for allocation or vested to an employee’s individual account.

	For the Three Months Ended December 31,	
	2011	2010
	(Dollars in thousands, except per share data)	
Net income (loss) (1)	\$ 18,789	\$(11,258)
Average common shares outstanding	161,921,133	165,539,517
Average committed ESOP shares outstanding	1,500	1,272
Total basic average common shares outstanding	161,922,633	165,540,789
Effect of dilutive RRP shares (2)	4,351	--
Effect of dilutive stock options (2)	3,743	--
Total diluted average common shares outstanding	161,930,727	165,540,789
Net earnings (loss) per share:		
Basic	\$0.12	\$(0.07)
Diluted	\$0.12	\$(0.07)
Antidilutive stock options and RRP shares, excluded from the diluted average common shares outstanding calculation	897,136	--

- (1) Net income (loss) available to participating securities (unvested RRP shares) was inconsequential for the three months ended December 31, 2011 and 2010.
- (2) RRP shares totaling 4,753 and options totaling 4,743 which were outstanding at December 31, 2010 were not included in the computation of diluted earnings per share as the effect on earnings per share would be antidilutive, due to the net loss for the three months ended December 31, 2010.

3. Securities

The following tables reflect the amortized cost, estimated fair value, and gross unrealized gains and losses of AFS and HTM securities at December 31, 2011 and September 30, 2011. The majority of the MBS and investment portfolios are composed of securities issued by U.S. government-sponsored enterprises ("GSEs").

	December 31, 2011			
	Amortized Cost	Gross Unrealized	Gross Unrealized	Estimated

On a quarterly basis, management conducts a formal review of securities for the presence of an other-than-temporary impairment. Management assesses whether an other-than-temporary impairment is present when the fair value of a security is less than its amortized cost basis at the balance sheet date. For such securities, other-than-temporary impairment is considered to have occurred if the Company intends to sell the security, if it is more likely than not the Company will be required to sell the security before recovery of its amortized cost basis, or if the present value of expected cash flows is not sufficient to recover the entire amortized cost.

The unrealized losses at December 31, 2011 and September 30, 2011 are primarily a result of increases in market yields from the time of purchase. In general, as market yields rise, the fair value of securities will decrease; as market yields fall, the fair value of securities will increase. Management generally views changes in fair value caused by changes in interest rates as temporary; therefore, these securities have not been classified as other-than-temporarily impaired. Additionally, the impairment is also considered temporary because scheduled coupon payments have been made, it is anticipated that the entire principal balance will be collected as scheduled, and management neither intends to sell the securities, nor is it more likely than not that the Company will be required to sell the securities before the recovery of the remaining amortized cost amount, which could be at maturity.

The amortized cost and estimated fair value of securities by remaining contractual maturity without consideration for call features or pre-refunding dates as of December 31, 2011 are shown below. Actual maturities of MBS may differ from contractual maturities because borrowers have the right to prepay obligations, generally without penalties. As of December 31, 2011, the amortized cost of the securities in our portfolio which are callable or have pre-refunding dates within one year totaled \$788.2 million. Maturities of MBS depend on the repayment characteristics and experience of the underlying financial instruments. Issuers of certain investment securities have the right to call and prepay obligations with or without prepayment penalties.

Premiums/deferred costs	(11,616)	(10,947)
	\$5,224,942	\$5,149,734

Lending Practices and Underwriting Standards - Originating and purchasing loans secured by one- to four-family residential properties is the Bank's primary business, resulting in a loan concentration in residential first mortgage

loans. The Bank purchases one- to four-family loans, on a loan-by-loan basis, from a select group of correspondent lenders located throughout the central United States. As a result of originating loans in our branches, along with the correspondent lenders in our local markets, the Bank has a concentration of loans secured by real property located in Kansas and Missouri. Additionally, the Bank purchases whole one- to four-family loans in bulk packages from nationwide and correspondent lenders. The Bank also makes consumer loans, construction loans secured by residential or commercial properties, and real estate loans secured by multi-family dwellings.

One- to four-family loans - One- to four-family loans are underwritten manually or by an automated underwriting system developed by a third party. The system's components closely resemble the Bank's manual underwriting standards which are generally in accordance with FHLMC and FNMA manual underwriting guidelines. The automated underwriting system analyzes the applicant's data, with emphasis on credit history, employment and income history, qualifying ratios reflecting the applicant's ability to repay, asset reserves, and LTV ratio. Full

documentation to support the applicant's credit, income, and sufficient funds to cover all applicable fees and reserves at closing is required on all loans. Loans that do not meet the automated underwriting standards are referred to a staff underwriter for manual underwriting. Properties securing one- to four-family loans are appraised by either staff appraisers or fee appraisers, both of which are independent of the loan origination function. The underwriting standards for loans purchased from correspondent and nationwide lenders are generally similar to the Bank's internal underwriting standards. The underwriting of correspondent loans is generally performed by the Bank's underwriters. Before committing to a bulk loan purchase, the Bank's Chief Lending Officer or Secondary Marketing Manager reviews specific criteria such as loan amount, credit scores, LTV ratios, geographic location, and debt ratios of each loan in the pool. If the specific criteria do not meet the Bank's underwriting standards and compensating factors are not sufficient, then a loan will be removed from the population. Before the bulk loan purchase is funded, an internal Bank underwriter or a third party reviews at least 25% of the loan files to confirm loan terms, credit scores, debt service ratios, property appraisals, and other underwriting related documentation. For the tables within this footnote, correspondent loans are included with originated loans, and bulk loan purchases are reported as purchased loans.

The Bank also originates construction-to-permanent loans secured by one- to four-family residential real estate. The majority of the one- to four-family construction loans are secured by property located within the Bank's Kansas City market area. Construction loans are obtained by homeowners who will occupy the property when construction is complete. Construction loans to builders for speculative purposes are not permitted. The application process includes submission of complete plans, specifications, and costs of the project to be constructed. All construction loans are manually underwritten using the Bank's internal underwriting standards. Construction draw requests and the supporting documentation are reviewed and approved by management. The Bank also performs regular documented inspections of the construction project to ensure the funds are being used for the intended purpose and the project is being completed according to the plans and specifications provided.

Multi-family and commercial loans - The Bank's multi-family and commercial real estate loans are secured primarily by properties generally located in the Bank's market areas or surrounding areas. These loans are granted based on the income producing potential of the property and the financial strength of the borrower. At the time of origination, LTV ratios on multi-family and commercial real estate loans cannot exceed 80% of the appraised value of the property securing the loans. The net operating income, which is the income derived from the operation of the property less all operating expenses, must be sufficient to cover the payments related to the outstanding debt at the time of origination. The Bank generally requires personal guarantees of the borrowers covering a portion of the debt in addition to the security property as collateral for these loans. Appraisals on properties securing these loans are performed by independent state certified fee appraisers. Bank policy permits a limited amount of construction-to-permanent loans secured by multi-family dwellings and commercial real estate.

Consumer loans - The Bank offers a variety of secured consumer loans, including home equity loans and lines of credit, home improvement loans, auto loans, and loans secured by savings deposits. The Bank also originates a very limited amount of unsecured loans. The Bank does not originate any consumer loans on an indirect basis, such as contracts purchased from retailers of goods or services which have extended credit to their customers. The majority of the consumer loan portfolio is comprised of home equity lines of credit.

The underwriting standards for consumer loans include a determination of the applicant's payment history on other debts and an assessment of their ability to meet existing obligations and payments on the proposed loan. Although creditworthiness of the applicant is a primary consideration, the underwriting process also includes a comparison of the value of the security in relation to the proposed loan amount.

Credit quality indicators – Based on the Bank's lending emphasis and underwriting standards, management has segmented the loan portfolio into three segments: one- to four-family loans, consumer loans, and multi-family and

commercial loans. The one- to four-family and consumer segments are further grouped into classes for purposes of providing disaggregated information about the credit quality of the loan portfolio. The classes are: one- to four-family loans – originated, one- to four-family loans – purchased, consumer loans – home equity, and consumer loans – other.

The Bank’s primary credit quality indicators for the one- to four-family loan and consumer - home equity loan portfolios are delinquency status, asset classifications in accordance with applicable regulations, LTV ratios and borrower credit scores. The Bank’s primary credit quality indicators for the multi-family and commercial loan and consumer – other loan portfolios are delinquency status and asset classifications in accordance with applicable regulations.

The following table presents the recorded investment of loans, defined as the unpaid loan principal balance (net of unadvanced funds related to loans in process) inclusive of unearned loan fees and deferred costs, of the Company's 30 to 89 day delinquent loans, 90 or more day delinquent loans, total delinquent loans, total current loans, and the total loans receivable balance at December 31, 2011 and September 30, 2011 by class. In the formula analysis model, loans in the 30 to 89 day delinquent category are assigned a higher loss factor than corresponding performing loans. Loans 90 or more days delinquent are considered impaired loans and are individually evaluated for impairment. At December 31, 2011 and September 30, 2011, all loans in the 90 or more days delinquent category were on nonaccrual status and represented the entire balance of nonaccrual loans. At December 31, 2011 and September 30, 2011, there were no loans 90 or more days delinquent that were still accruing interest.

	December 31, 2011

In accordance with the Bank's asset classification policy, management regularly reviews the problem loans in the Bank's portfolio to determine whether any assets require classification. Loan classifications, other than pass loans, are defined as follows:

- Special mention - These loans are performing loans on which known information about the collateral pledged or the possible credit problems of the borrowers have caused management to have doubts as to the ability of the borrowers to comply with present loan repayment terms and which may result in the future inclusion of such loans in the non-performing loan categories.
- Substandard - A loan is considered substandard if it is inadequately protected by the current net worth and paying capacity of the obligor or of the collateral pledged, if any. Substandard loans include those characterized by the distinct possibility the Bank will sustain some loss if the deficiencies are not corrected.
 - Doubtful - Loans classified as doubtful have all the weaknesses inherent as those classified as substandard, with the added characteristic that the weaknesses present make collection or liquidation in full on the basis

of currently existing facts and conditions and values highly questionable and improbable.

- Loss - Loans classified as loss are considered uncollectible and of such little value that their continuance as loans without the establishment of specific loss allowance is not warranted.

Special mention loans are included with loans 30 to 89 days delinquent in the formula analysis model, if the loan is not considered impaired. Loans classified as substandard, doubtful, or loss are considered impaired loans and are individually evaluated for impairment.

The following tables set forth the recorded investment in loans, less SVAs and charge-offs, classified as special mention or substandard at December 31, 2011 and September 30, 2011, by class. At December 31, 2011 there were no loans classified as doubtful and \$34 thousand of one- to four-family purchased loans classified as loss that were not fully reserved or charged-off. At September 30, 2011, there were no loans classified as doubtful or loss that were not fully reserved or charged-off. In addition to the classified loans discussed above and noted below, at December 31, 2011 and September 30, 2011, the Bank had other assets with a carrying value of \$10.2 million and \$10.3 million, respectively, comprised of municipal bonds and a trust preferred security, also classified per its asset classification policy.

	December 31, 2011		September 30, 2011	
	Special Mention	Substandard	Special Mention	Substandard
	(Dollars in thousands)			
One- to four-family - originated	\$28,825	\$ 22,697	\$32,673	\$ 18,419

Consumer - home equity	237	631	50	592
Consumer - other	--	9	--	5
	\$32,361	\$ 39,818	\$40,853	\$ 35,003

The following table shows the weighted average LTV and credit score information for originated and purchased one-to four-family loans and originated consumer home equity loans at December 31, 2011 and September 30, 2011. Borrower credit scores are intended to provide an indication as to the likelihood that a borrower will repay their debts. Credit scores are typically updated in the last month of the quarter and are obtained from a nationally recognized consumer rating agency. The LTV ratios provide an estimate of the extent to which the Bank may incur a loss on any given loan that may go into foreclosure. The LTV ratios were based on the current loan balance and either the lesser of the purchase price or original appraisal, or the most recent bank appraisal, BPO or AVM, if available. In most cases, the most recent appraisal was obtained at the time of origination.

	December 31, 2011		September 30, 2011	
	Weighted Average Credit Score	Weighted Average LTV	Weighted Average Credit Score	Weighted Average LTV
One- to four-family - originated	763	66 %	762	66 %
One- to four-family - purchased	740	60	740	60
Consumer - home equity	744	19	742	20
	760	64 %	759	64 %

Troubled Debt Restructurings - The following table presents the recorded investment of TDRs at the dates presented, including restructurings granted to borrowers who were experiencing financial difficulties and certain restructurings of loans to current market interest rates through the Bank's loan endorsement program. The endorsed loans classified as TDRs represent loans where there has been a decrease in soft credit scores and/or estimated LTV ratios since the time the loan was originated. As a result of these decreases, the borrower could be experiencing financial difficulties even though they have not been delinquent in the previous 12 months on their existing loan payments.

	\$30,667	\$ 19,624	\$50,291

The recorded investment of TDRs classified as impaired totaled \$44.8 million at December 31, 2011. Impaired loans are individually evaluated for losses. TDRs not classified as impaired, which totaled \$14.2 million at December 31, 2011, are included in the formula analysis model in their appropriate loan category. At December 31, 2011, \$877 thousand was recorded in the ACL related to TDRs.

The following table presents the recorded investment prior to restructuring and immediately after restructuring for all loans restructured during the quarter ended December 31, 2011. This table does not reflect the recorded investment at December 31, 2011.

	Number of Contracts	Pre- Restructured Outstanding (Dollars in thousands)	Post- Restructured Outstanding
One- to four-family loans - originated	70	\$ 10,331	\$ 10,370
One- to four-family loans - purchased	--	--	--
Multi-family and commercial loans	--	--	--
Consumer - home equity	1	--	10
Consumer - other	--	--	--
	71	\$ 10,331	\$ 10,380

As of December 31, 2011, the recorded investment of TDRs 30 to 89 days delinquent and over 90 days delinquent was \$2.4 million and \$3.1 million, respectively. The following table provides information on TDRs restructured within the last 12 months that subsequently became delinquent during the quarter ended December 31, 2011. Of the two loans in the table that became delinquent during the quarter, one loan, with a recorded investment of \$76 thousand as of December 31, 2011, had returned to current status as of December 31, 2011.

	Number of Contracts	Recorded Investment (Dollars in thousands)
One- to four-family loans - originated	1	\$76
One- to four-family loans - purchased	1	401
Multi-family and commercial loans	--	--
Consumer - home equity	--	--
Consumer - other	--	--
	2	\$477

Impaired loans - Impaired loans are defined as non-accrual loans, loans classified as substandard, loans with SVAs, and TDRs that have not yet performed under the restructured terms for 12 consecutive months or are required by the accounting literature to be classified as a TDR for the life of the loan due to a reduction in the stated interest rate to a rate lower than the current market rate for new debt with similar risk. Substantially all of the impaired loans at December 31, 2011 and September 30, 2011 were secured by residential real estate. Impaired loans related to residential real estate are individually evaluated to ensure that the carrying value of the loan is not in excess of the fair value of the collateral, less estimated selling costs. Fair values of residential real estate are estimated through such methods as current appraisals, AVMs, BPOs, or listing prices. Fair values may be adjusted by management to reflect current economic and market conditions. If the outstanding loan balance is in excess of the estimated fair value determined by management, less estimated costs to sell, then an SVA or charge-off is recorded for the difference.

As noted above, the Bank has a loan concentration in residential first mortgage loans. Continued declines in residential real estate values could adversely impact the property used as collateral for the Bank's loans. Adverse changes in the economic conditions and increasing unemployment rates may have a negative effect on the ability of the Bank's borrowers to make timely loan payments, which would likely increase delinquencies and have an adverse impact on the Bank's earnings. Further increases in delinquencies will decrease interest income on loans receivable and will likely adversely impact the Bank's loan loss experience, resulting in an increase in the Bank's ACL and provision for credit losses. Although management believes the ACL was at an adequate level to absorb known and inherent losses in the loan portfolio at December 31, 2011, the level of the ACL remains an estimate that is subject to significant judgment and short-term changes. Additions to the ACL may be necessary if future economic and other conditions differ substantially from the current environment.

5. Fair Value of Financial Instruments

Fair Value Measurements - ASC 820, Fair Value Measurements and Disclosures, defines fair value, establishes a framework for measuring fair value, and expands disclosures about fair value measurements. ASC 820 applies only to fair value measurements already required or permitted by other accounting standards and does not impose requirements for additional fair value measures. ASC 820 was issued to increase consistency and comparability in reporting fair values.

The Company uses fair value measurements to record fair value adjustments to certain assets and to determine fair value disclosures. The Company did not have any liabilities that were measured at fair value at December 31, 2011 and September 30, 2011. The Company's AFS securities are recorded at fair value on a recurring basis. Additionally, from time to time, the Company may be required to record at fair value other assets or liabilities on a non-recurring basis, such as REO, LHFS, and impaired loans. These non-recurring fair value adjustments involve the application of lower-of-cost-or-fair value accounting or write-downs of individual assets.

In accordance with ASC 820, the Company groups its assets at fair value in three levels, based on the markets in which the assets are traded and the reliability of the assumptions used to determine fair value. These levels are:

- Level 1 — Valuation is based upon quoted prices for identical instruments traded in active markets.
- Level 2 — Valuation is based upon quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active, and model-based valuation techniques for which all significant assumptions are observable in the market.
- Level 3 — Valuation is generated from model-based techniques that use significant assumptions not observable in the market. These unobservable assumptions reflect the Company's own estimates of assumptions that market participants would use in pricing the asset or liability. Valuation techniques include the use of option pricing models, discounted cash flow models, and similar techniques. The results cannot be determined with precision and may not be realized in an actual sale or immediate settlement of the asset or liability.

The Company bases its fair values on the price that would be received to sell an asset in an orderly transaction between market participants at the measurement date. As required by ASC 820, the Company maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value.

The following is a description of valuation methodologies used for assets measured at fair value on a recurring basis.

AFS Securities - The Company's AFS securities portfolio is carried at estimated fair value, with any unrealized gains and losses, net of taxes, reported as AOCI in stockholders' equity. The Company's major security types based on the nature and risks of the securities are included in the table below. The majority of the securities within the AFS portfolio are issued by U.S. GSEs. The fair values for all AFS securities are based on quoted prices for similar securities. Various modeling techniques are used to determine pricing for the Company's securities, including option pricing and discounted cash flow estimates. The inputs to these models may include benchmark yields, reported trades, broker/dealer quotes, issuer spreads, benchmark securities, bids, offers and reference data. There is an AFS security in the AFS portfolio that has significant unobservable inputs requiring the independent pricing services to use

some judgment in pricing it. This AFS security is classified as Level 3. All other AFS securities are classified as Level 2.

The following table provides the level of valuation assumption used to determine the carrying value of the Company's assets measured at fair value on a recurring basis, which consists of AFS securities, at December 31, 2011 and September 30, 2011.

	Carrying Value	December 31, 2011		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3) (1)
(Dollars in thousands)				
AFS Securities:				
GSE debentures	\$ 882,328	\$--	\$ 882,328	\$ --
Municipal bonds	2,567	--	2,567	--
Trust preferred securities	3,002	--	--	3,002
MBS	682,833	--	682,833	--
	\$ 1,570,730	\$--	\$ 1,567,728	\$ 3,002
	Carrying Value	September 30, 2011		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3) (2)
(Dollars in thousands)				
AFS Securities:				
GSE debentures	\$ 748,308	\$--	\$ 748,308	\$ --
Municipal bonds	2,754	--	2,754	--
Trust preferred securities	2,941	--	--	2,941
MBS	732,436	--	732,436	--
	\$ 1,486,439	\$--	\$ 1,483,498	\$ 2,941

(1) The Company's Level 3 AFS securities had no activity from September 30, 2011 to December 31, 2011, except for principal repayments of \$178 thousand and reductions in net unrealized losses recognized in other comprehensive income. Reductions of net unrealized losses included in other comprehensive income for the three months ended December 31, 2011 were \$121 thousand.

(2) The Company's Level 3 AFS securities had no activity from September 30, 2010 to September 30, 2011, except for principal repayments of \$87 thousand and reductions in net unrealized losses recognized in other comprehensive income. Reductions of net unrealized losses included in other comprehensive income for the year

ended September 30, 2011 were \$115 thousand.

The following is a description of valuation methodologies used for significant assets measured at fair value on a non-recurring basis.

Loans Receivable - Loans which meet certain criteria are evaluated individually for impairment. A loan is considered impaired when, based upon current information and events, it is probable the Bank will be unable to collect all amounts due, including principal and interest, according to the contractual terms of the loan agreement. The unpaid principal balance of impaired loans at December 31, 2011 and September 30, 2011 was \$72.5 million and \$72.0 million, respectively. Substantially all of the Bank's impaired loans at December 31, 2011 and September 30, 2011 were secured by residential real estate. These impaired loans are individually assessed to ensure that the carrying value of the loan is not in excess of the fair value of the collateral, less estimated selling costs. Fair value is estimated through current appraisals, AVMs, BPOs, or listing prices. Fair values may be adjusted by management to reflect current economic and market conditions and, as such, are classified as Level 3. Based on this evaluation, the Company maintained an ACL of \$3.5 million and \$3.8 million at December 31, 2011 and September 30, 2011, respectively, for such impaired loans.

REO, net - REO primarily represents real estate acquired as a result of foreclosure or by deed in lieu of foreclosure and is carried at lower-of-cost or fair value. Fair value is estimated through current appraisals, AVMs, BPOs, or listing prices. As these properties are actively marketed, estimated fair values may be adjusted by management to reflect current economic and market conditions and, as such, are classified as Level 3. The fair value of REO at December 31, 2011 and September 30, 2011 was \$11.2 million and \$11.3 million, respectively.

The following table provides the level of valuation assumption used to determine the carrying value of the Company's assets measured at fair value on a non-recurring basis at December 31, 2011 and September 30, 2011.

	Carrying Value	December 31, 2011		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Impaired loans	\$72,471	\$--	\$--	\$ 72,471
REO, net	11,189	--	--	11,189
	\$83,660	\$--	\$--	\$ 83,660

	Carrying Value	September 30, 2011		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Impaired loans	\$72,048	\$--	\$--	\$ 72,048
REO, net	11,321	--	--	11,321
	\$83,369	\$--	\$--	\$ 83,369

Fair Value Disclosures - The Company determined estimated fair value amounts using available market information and a selection from a variety of valuation methodologies. However, considerable judgment is required to interpret market data to develop the estimates of fair value. Accordingly, the estimates presented are not necessarily indicative of the amount the Company could realize in a current market exchange. The use of different market assumptions and estimation methodologies may have a material impact on the estimated fair value amounts. The fair value estimates presented herein are based on pertinent information available to management as of December 31, 2011 and September 30, 2011. Although management is not aware of any factors that would significantly affect the estimated fair value amounts, such amounts have not been comprehensively revalued for purposes of these financial statements since those dates.

The estimated fair values of the Company's financial instruments as of December 31, 2011 and September 30, 2011 were as follows.

	December 31, 2011		September 30, 2011	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
(Dollars in thousands)				
Assets:				
Cash and cash equivalents	\$ 170,175	\$ 170,175	\$ 121,070	\$ 121,070
AFS securities	1,570,730	1,570,730	1,486,439	1,486,439
HTM securities	2,129,417	2,193,944	2,370,117	2,434,392
Loans receivable	5,224,942	5,533,163	5,149,734	5,475,150
BOLI	56,947	56,947	56,534	56,534
Capital stock of FHLB	129,503	129,503	126,877	126,877
Liabilities:				
Deposits	4,501,144	4,553,531	4,495,173	4,553,516
Advances from FHLB	2,531,304	2,717,330	2,379,462	2,569,958
Other borrowings	365,000	391,439	515,000	545,096

The following methods and assumptions were used to estimate the fair value of the financial instruments:

Cash and Cash Equivalents - The carrying amounts of cash and cash equivalents are considered to approximate their fair value due to the nature of the financial asset.

AFS and HTM Securities - Estimated fair values of securities are based on one of three methods: 1) quoted market prices where available, 2) quoted market prices for similar instruments if quoted market prices are not available, 3) unobservable data that represents the Bank's assumptions about items that market participants would consider in determining fair value where no market data is available. AFS securities are carried at estimated fair value. HTM securities are carried at amortized cost.

Loans Receivable - Fair values are estimated for portfolios with similar financial characteristics. Loans are segregated by type, such as one- to four-family residential mortgages, multi-family residential mortgages, nonresidential, and installment loans. Each loan category is further segmented into fixed- and adjustable interest rate categories. Market pricing sources are used to approximate the estimated fair value of fixed- and adjustable-rate one- to four-family residential mortgages. For all other loan categories, future cash flows are discounted using the LIBOR curve plus a margin at which similar loans would be made to borrowers with similar credit ratings and for the same remaining maturity.

BOLI - The carrying value of BOLI is considered to approximate its fair value due to the nature of the financial asset.

Capital Stock of FHLB - The carrying value of FHLB stock equals cost. The fair value is based on redemption at par value.

Deposits - The estimated fair value of demand deposits, savings and money market accounts is the amount payable on demand at the reporting date. The estimated fair value of fixed-maturity certificates of deposit is estimated by discounting the future cash flows using a margin to the LIBOR curve.

Advances from FHLB - The estimated fair value of advances from FHLB is determined by discounting the future cash flows of each advance using a margin to the LIBOR curve.

Other Borrowings - Other borrowings consists of repurchase agreements. The estimated fair value of the repurchase agreements is determined by discounting the future cash flows of each agreement using a margin to the LIBOR curve.

6. Subsequent Events

In preparing these financial statements, management has evaluated events occurring subsequent to December 31, 2011, for potential recognition and disclosure. There have been no material events or transactions which would require adjustments to the consolidated financial statements at December 31, 2011.

Subsequent to December 31, 2011, the Bank prepaid a \$200.0 million fixed-rate FHLB advance with an interest rate of 3.88% and a remaining term to maturity of 15 months. The prepaid FHLB advance was replaced with a \$200.0 million fixed-rate FHLB advance, with a contractual interest rate of 0.86% and a term of 46 months.

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations

The Company and its wholly-owned subsidiary may from time to time make written or oral “forward-looking statements,” including statements contained in documents filed or furnished by the Company with the SEC. These forward-looking statements may be included in this Quarterly Report on Form 10-Q and the exhibits attached to it, in the Company’s reports to stockholders, in the Company’s press releases, and in other communications by the Company, which are made in good faith by us pursuant to the “safe harbor” provisions of the Private Securities Litigation Reform Act of 1995.

These forward-looking statements include statements about our beliefs, plans, objectives, goals, expectations, anticipations, estimates and intentions, that are subject to significant risks and uncertainties, and are subject to change based on various factors, some of which are beyond our control. The words “may,” “could,” “should,” “would,” “believe,” “anticipate,” “estimate,” “expect,” “intend,” “plan” and similar expressions are intended to identify forward-looking statements. The following factors, among others, could cause our future results to differ materially from the plans, objectives, goals, expectations, anticipations, estimates and intentions expressed in the forward-looking statements:

- our ability to continue to maintain overhead costs at reasonable levels;
- our ability to continue to originate a significant volume of one- to four-family mortgage loans in our market areas or to purchase loans through correspondents;
 - our ability to acquire funds from or invest funds in wholesale or secondary markets;
- the future earnings and capital levels of the Bank and the continued non-objection by our primary federal banking regulators, to the extent required, to distribute capital from the Bank to the Company, which could affect the ability of the Company to pay dividends in accordance with its dividend policies;
- fluctuations in deposit flows, loan demand, and/or real estate values, as well as unemployment levels, which may adversely affect our business;
- the credit risks of lending and investing activities, including changes in the level and direction of loan delinquencies and write-offs, changes in property values, and changes in estimates of the adequacy of the ACL;
 - results of examinations of the Bank and the Company by their respective primary federal banking regulators, including the possibility that the regulators may, among other things, require us to increase our ACL;
- the strength of the U.S. economy in general and the strength of the local economies in which we conduct operations;
- the effects of, and changes in, trade, monetary and fiscal policies and laws, including interest rate policies of the Board of Governors of the Federal Reserve System (“FRB”);
 - the effects of, and changes in, foreign and military policies of the United States government;
 - inflation, interest rate, market and monetary fluctuations;
 - our ability to access cost-effective funding;
- the timely development and acceptance of our new products and services and the perceived overall value of these products and services by users, including the features, pricing and quality compared to competitors’ products and services;
 - the willingness of users to substitute competitors’ products and services for our products and services;
- our success in gaining regulatory approval of our products and services and branching locations, when required;
- the impact of changes in financial services laws and regulations, including laws concerning taxes, banking, securities and insurance and the impact of other governmental initiatives affecting the financial services industry;
 - implementing business initiatives may be more difficult or expensive than anticipated;
 - technological changes;
 - acquisitions and dispositions;
 - changes in consumer spending and saving habits; and
 - our success at managing the risks involved in our business.

This list of important factors is not all inclusive. We do not undertake to update any forward-looking statement, whether written or oral, that may be made from time to time by or on behalf of the Company or the Bank.

As used in this Form 10-Q, unless we specify otherwise, “the Company,” “we,” “us,” and “our” refer to Capitol Federal Financial, Inc., a Maryland corporation, and its predecessor, Capitol Federal Financial, a United States

corporation. “Capitol Federal Savings,” and “the Bank,” refer to Capitol Federal Savings Bank, a federal savings bank and the wholly-owned subsidiary of Capitol Federal Financial, Inc.

The following discussion and analysis is intended to assist in understanding the financial condition, results of operations, liquidity and capital resources of the Company. It should be read in conjunction with the consolidated financial statements and notes presented in this report. The discussion includes comments relating to the Bank, since the Bank is wholly-owned by the Company and comprises the majority of its assets and is the principal source of income for the Company. This discussion and analysis should be read in conjunction with management’s discussion and analysis included in the Company’s 2011 Annual Report on Form 10-K filed with the SEC.

Executive Summary

The following summary should be read in conjunction with our Management’s Discussion and Analysis of Financial Condition and Results of Operations in its entirety.

We have been, and intend to continue to be, a community-oriented financial institution offering a variety of financial services to meet the needs of the communities we serve. We generally attract retail deposits from the general public and invest those funds primarily in permanent loans secured by first mortgages on owner-occupied, one- to four-family residences. To a much lesser extent, we also originate consumer loans, loans secured by first mortgages on non-owner-occupied one- to four-family residences, multi-family and commercial real estate loans, and construction loans. While our primary business is the origination of one- to four-family mortgage loans funded through retail deposits, we also purchase whole one- to four-family mortgage loans from correspondent and nationwide lenders, and invest in certain investment securities and MBS funded through retail deposits, advances from FHLB, and repurchase agreements. The Company is significantly affected by prevailing economic conditions including federal monetary and fiscal policies and federal regulation of financial institutions. Retail deposit balances are influenced by a number of factors including interest rates paid on competing personal investment products, the level of personal income, and the personal rate of savings within our market areas. Lending activities are influenced by the demand for housing and other loans, changing loan underwriting guidelines, as well as interest rate pricing competition from other lending institutions. The primary sources of funds for lending activities include deposits, loan repayments, investment income, borrowings, and funds provided from operations.

The Company’s results of operations are primarily dependent on net interest income, which is the difference between the interest earned on loans, MBS, investment securities and cash, and the interest paid on deposits and borrowings. On a weekly basis, management reviews deposit flows, loan demand, cash levels, and changes in several market rates to assess all pricing strategies. We generally price our loan and deposit products based upon an analysis of our competition and changes in market rates. The Bank generally prices its first mortgage loan products based on secondary market and competitor pricing. Generally, deposit pricing is based upon a survey of competitors in the Bank’s market areas, and the need to attract funding and retain maturing deposits. The majority of our loans are fixed-rate products with maturities up to 30 years, while the majority of our deposits have maturity or repricing dates of less than two years.

The Federal Open Market Committee of the Federal Reserve (the “FOMC”) noted in their January 2012 meeting minutes that the economic recovery was continuing at a moderate pace, but was hampered by a weak job market, a high unemployment rate, and persistent depression in the housing sector. The FOMC continued to maintain the target range for federal funds rate at zero to 25 basis points, and projected that economic conditions could warrant this target range through late 2014. Additionally, the FOMC committed to maintain its existing policy of reinvesting principal payments from securities holdings, and intends to extend the average maturity of its securities holdings. These actions are intended to lower long-term rates and increase economic activity. These actions, along with previous FOMC

actions, have effectively increased the amount of excess reserves in the banking system, which is intended to reduce long-term interest rates and increase liquidity in an effort to stimulate borrowing and investment. The FOMC has also indicated that other methods of quantitative easing are a possibility, while simultaneously revealing a potential exit strategy from the accommodative monetary policies should the economic outlook and financial developments warrant it.

Economic conditions in the Bank's local market areas have a significant impact on the ability of borrowers to repay loans and the value of the collateral securing these loans. Our asset quality has remained high, as our local market areas have not experienced the large fluctuations in property values as experienced by many segments of the United States, and our unemployment rate has remained relatively low, currently at 7.4% in our combined market areas, compared to the national average of 8.5%. The unemployment rate remains relatively low, compared to the national average, due to diversified industries within our market areas, primarily in the Kansas City metropolitan

statistical area, but it is higher than the historical average. The FHFA price index for Kansas and Missouri has not experienced significant fluctuations during the past ten years, which indicates relative stability in property values. Our Kansas City market area comprises the largest segment of our loan portfolio and deposit base, and the average household income for our Kansas City market area is approximately \$79 thousand per annum. The average household income in our combined market areas is approximately \$68 thousand per annum, with 92% of the population at or above poverty level.

Total assets decreased \$29.8 million, from \$9.45 billion at September 30, 2011 to \$9.42 billion at December 31, 2011, due to a \$156.4 million decrease in securities, partially offset by a \$75.2 million increase in loans receivable. The decrease in securities was a result of calls and maturities that were not reinvested in their entirety into the securities portfolio. The increase in loans receivable was primarily due to an increase in the one- to four-family portfolio as a result of originations and purchases.

The historically low interest rate environment over the past three years has spurred an increased demand for our loan endorsement program and mortgage refinances. Our loan endorsement program allows existing loan customers, whose loans have not been sold to third parties, who have not been delinquent on their contractual loan payments for the previous 12 months, and are not currently in bankruptcy, the opportunity to modify, for a fee, their original loan terms to current loan terms being offered. During fiscal year 2011, the Bank endorsed \$965.1 million in loans, with a weighted average rate decrease of 101 basis points; along with refinancing \$292.8 million of customers' loans. During the first quarter of fiscal year 2012, the Bank endorsed \$341.2 million in loans, with a weighted average rate decrease of 114 basis points; along with refinancing \$93.2 million of customers' loans.

The principal balance of loans 30 to 89 days delinquent decreased \$1.1 million, from \$26.8 million at September 30, 2011 to \$25.7 million at December 31, 2011. The balance of loans 30 to 89 days delinquent and non-performing loans continue to remain at historically high levels for the Bank due to persistently elevated levels of unemployment coupled with declines in real estate activity and property values. Non-performing loans increased \$1.9 million, from \$26.5 million at September 30, 2011 to \$28.4 million at December 31, 2011. Our ratio of non-performing loans to total loans increased from 0.51% at September 30, 2011 to 0.54% at December 31, 2011. Our ratio of non-performing assets to total assets increased to 0.42% at December 31, 2011 from 0.40% at September 30, 2011.

Total liabilities decreased \$21.5 million, from \$7.51 billion at September 30, 2011 to \$7.49 billion at December 31, 2011, due primarily to a decrease of \$32.9 million in escrow funds resulting from the payment of real estate taxes and insurance on behalf of our borrowers, partially offset by an increase in deposits of \$6.0 million. The increase in deposits was primarily in the money market and checking portfolios.

Stockholders' equity decreased \$8.2 million, from \$1.94 billion at September 30, 2011 to \$1.93 billion at December 31, 2011. The decrease was due primarily to dividends paid of \$28.3 million, partially offset by net income of \$18.8 million. On December 21, 2011, the Company announced that the Board of Directors approved the repurchase of up to \$193.0 million of the Company's common stock. There were no stock repurchases during the current quarter. This plan has no expiration date.

Net income for the quarter ended December 31, 2011 was \$18.8 million, compared to a net loss of \$11.3 million for the quarter ended December 31, 2010. The \$30.1 million increase for the current year was due primarily to the \$40.0 million (\$26.0 million, net of income tax benefit) contribution to the Capitol Federal Foundation (the "Foundation") in connection with the corporate reorganization in December 2010. Additionally, net interest income increased \$5.4 million, or 13.4%, from \$40.0 million for the quarter ended December 31, 2010 to \$45.4 million for the quarter ended December 31, 2011. The increase in net interest income was due primarily to a decrease in interest expense of \$7.8 million, or 16.5%, partially offset by a decrease in interest income of \$2.4 million, or 2.8%. The net interest margin increased 10 basis points, from 1.88% for the quarter ended December 31, 2010 to 1.98% for the quarter ended December 31, 2011, largely due to the decrease in interest expense on interest-bearing liabilities.

The Bank has two branches expected to open in calendar year 2012 in our Kansas City market area. Management continues to consider expansion opportunities in all of our market areas.

Critical Accounting Policies

Our most critical accounting policies are the methodologies used to determine the ACL and fair value measurements. These policies are important to the presentation of our financial condition and results of operations, involve a high degree of complexity, and require management to make difficult and subjective judgments that may require assumptions or estimates about highly uncertain matters. The use of different judgments, assumptions, and estimates could cause reported results to differ materially. These critical accounting policies and their application are reviewed at least annually by our audit committee. For a full discussion of our critical accounting policies, see Item 7 - "Management's Discussion and Analysis of Financial Condition and Results of Operations – Critical Accounting Policies" in the Company's Annual Report on Form 10-K for the fiscal year ended September 30, 2011.

Financial Condition

Assets, liabilities and stockholders' equity decreased slightly from September 30, 2011 to December 31, 2011. Total assets decreased \$29.8 million, from \$9.45 billion at September 30, 2011 to \$9.42 billion at December 31, 2011, due to a \$156.4 million decrease in securities, partially offset by a \$75.2 million increase in loans receivable. Total liabilities decreased \$21.5 million, from \$7.51 billion at September 30, 2011 to \$7.49 billion at December 31, 2011, due primarily to a decrease of \$32.9 million in escrow funds resulting from the payment of real estate taxes and insurance on behalf of our borrowers. Stockholders' equity decreased \$8.2 million, from \$1.94 billion at September 30, 2011 to \$1.93 billion at December 31, 2011. The decrease was due primarily to dividends paid of \$28.3 million, partially offset by net income of \$18.8 million.

Loans Receivable. The loans receivable portfolio increased \$75.2 million, or at an annualized rate of 5.8%, to \$5.22 billion at December 31, 2011, from \$5.15 billion at September 30, 2011. The increase in loans receivable was primarily due to an increase in the one- to four-family portfolio as a result of originations and purchases. During the first quarter of fiscal year 2012, the Bank purchased \$63.6 million in correspondent one- to four-family loans and \$20.3 million of one- to four-family loans in a bulk package.

Included in the loan portfolio at December 31, 2011 were \$160.6 million, or 3.1% of the total loan portfolio, of adjustable-rate mortgage (“ARM”) loans that were originated as interest-only. Of these interest-only loans, \$129.7 million were purchased in bulk loan packages from nationwide lenders, primarily during fiscal year 2005. Interest-only ARM loans do not typically require principal payments during their initial term, and have initial interest-only terms of either five or ten years. The \$129.7 million of purchased interest-only ARM loans had a weighted average credit score of 723 and a weighted average LTV ratio of 75% at December 31, 2011. In order to reduce future credit risk, the Bank has not purchased any interest-only ARM loans since 2006 and discontinued offering the product in its local markets during 2008. At December 31, 2011, \$83.6 million, or 52%, of interest-only loans were still in their interest-only payment term. At December 31, 2011, \$8.2 million, or 29% of non-performing loans, were interest-only ARMs.

The following table presents information concerning the composition of our loan portfolio as of December 31, 2011 and September 30, 2011. Within the one- to four-family loan portfolio at December 31, 2011, 75% of the loans had a balance at origination of less than \$417 thousand. The weighted average rate of the loan portfolio decreased 16 basis points from 4.69% at September 30, 2011 to 4.53% at December 31, 2011. The decrease in the weighted average portfolio rate was due to loan endorsements, loan originations at current market rates below that of the existing portfolio, refinances, and ARMs repricing down to lower market rates.

The following tables present the weighted average credit score, LTV ratio, and the average unpaid principal balance for our one- to four-family loans as of the dates presented. Credit scores are typically updated in the last month of the quarter and are obtained from a nationally recognized consumer rating agency. The LTV ratios were based on the current loan balance and either the lesser of the purchase price or original appraisal, or the most recent bank appraisal, BPO or AVM. In most cases, the most recent appraisal was obtained at the time of origination.

Since March 2010, the Bank has entered into correspondent lending relationships with 13 new correspondent lenders in our local market areas and also in states generally located throughout the central United States. At December 31, 2011, the Bank had 19 correspondent lending relationships. Management continues its efforts to expand our network of lending relationships related to our bulk purchase program that would provide mortgage loans in selected geographic locations that adhere to the Bank's underwriting standards.

The following table presents the weighted average life ("WAL"), which reflects prepayment assumptions, of our one- to four-family loan portfolio, excluding construction loans and non-performing loans, as of December 31, 2011.

The following table summarizes the activity in the loan portfolio for the periods indicated, excluding changes in loans in process, deferred fees, and ACL. Loans that were paid-off as a result of refinances are included in repayments. During the three months ended December 31, 2011, the Bank endorsed \$341.2 million of loans, with a weighted average rate decrease of 114 basis points. Loan endorsements are not included in the activity in the following table because a new loan is not generated at the time of the endorsement. The endorsed balance and rate are, however, included in the ending loan portfolio balance and rate.

(1) "Other" consists of transfers to REO, endorsement fees advanced, and reductions in commitments.

The Bank generally prices its first mortgage loan products based on secondary market and competitor pricing. During the three months ended December 31, 2011, the average rate offered on the Bank's 30-year fixed-rate one- to four-family loans, with no points paid by the borrower, was approximately 210 basis points above the average 10-year Treasury rate, while the average rate offered on the Bank's 15-year fixed-rate one- to four-family loans was approximately 130 basis points above the average 10-year Treasury rate.

The following table presents loan origination, refinance and purchase activity for the periods indicated. Loan originations, purchases and refinances are reported together. The fixed-rate one- to four-family loans less than or equal to 15 years have a maturity at origination of less than or equal to 15 years, while fixed-rate one- to four-family loans greater than 15 years have a maturity at origination of greater than 15 years. The adjustable-rate one- to four-family loans less than or equal to 36 months have a term to first reset of less than or equal to 36 months at origination and adjustable-rate one- to four-family loans greater than 36 months have a term to first reset of greater than 36 months at origination. Of the \$218.4 million of one- to four-family loan originations and refinances for the three months ended December 31, 2011, 83% had loan values of \$417 thousand or less. Of the \$83.9 million of one- to four-family correspondent and bulk loan purchases for the three months ended December 31, 2011, 23% had loan values of \$417 thousand or less.

The following table presents the origination and purchase activity in our one- to four-family loan portfolio for the three months ended December 31, 2011, excluding endorsement activity, and the LTV and credit score at the time of origination.

	For the Three Months Ended		
	December 31,		
	Amount	LTV	Credit Score
	(Dollars in thousands)		
Originations	\$125,192	73 %	764
Refinances by Bank customers	93,233	67	774
Correspondent purchases	63,638	66	771
Bulk purchases	20,260	60	763
	\$302,323	69 %	769

The following table summarizes our one- to four-family loan commitments for originations, refinances, and purchases at the dates noted. Commitments to originate and refinance one- to four-family loans are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Commitments generally have fixed expiration dates or other termination clauses and may require the payment of a rate lock fee. Some of the commitments are expected to expire without being fully drawn upon; therefore, the amount of total commitments disclosed below does not necessarily represent future cash requirements.

Asset Quality – Loans and REO

The Bank's traditional underwriting guidelines have provided the Bank with generally low delinquencies and low levels of non-performing assets compared to national levels. Of particular importance is the complete and full documentation required for each loan the Bank originates and purchases. This allows the Bank to make an informed credit decision based upon a thorough assessment of the borrower's ability to repay the loan compared to underwriting methodologies that do not require full documentation. See additional discussion regarding underwriting standards in "Lending Practices and Underwriting Standards" in the Company's Annual Report on Form 10-K for the fiscal year ended September 30, 2011. In the following asset quality discussion, correspondent purchased loans are included with originated loans and bulk purchased loans are reported as purchased loans.

Delinquent and non-performing loans and REO

The following tables present the Company's 30 to 89 day delinquent loans, non-performing loans, and REO at the dates indicated. Non-performing loans are non-accrual loans that are 90 or more days delinquent or are in the process of foreclosure. At all dates presented, there were no loans 90 or more days delinquent that were still accruing interest. Loans classified as TDRs are not included in delinquent or non-performing loans unless the restructured loans are 30 or more days delinquent. TDR's 30 to 89 days delinquent were \$2.4 million and non-performing TDR's were \$3.1 million at December 31, 2011. REO primarily includes assets acquired in settlement of loans. Non-performing assets include non-performing loans and REO.

The following table presents the top 12 states where the properties securing our one- to four-family loans are located and the corresponding balance of 30 to 89 day delinquent loans, non-performing loans and the weighted average LTV ratios for non-performing loans at December 31, 2011. The LTV ratios were based on the unpaid principal balance and either the lesser of the purchase price or original appraisal or the most recent bank appraisal, BPO or AVM, if available. As a result of updated estimated fair values, the LTV of some non-performing loans in the table below are now in excess of 100%. At December 31, 2011, SVAs were recorded on these loans, after taking into consideration potential PMI proceeds and the costs to sell the property.

Troubled Debt Restructurings and Impaired Loans

A traditional TDR is a situation in which the Bank may grant a concession to a borrower experiencing financial difficulties. Generally, the Bank grants a short-term payment accommodation to borrowers who are experiencing a temporary cash flow problem. The most frequently used accommodation is to reduce the monthly payment amount for a period of six to 12 months, often by only requiring payments of interest and escrow during this period. These restructurings result in an extension of the maturity date of the loan. For more severe situations requiring long-term solutions, the Bank also offers interest rate reductions to currently-offered rates and extensions of the maturity date. The Bank does not forgive principal or interest nor does it commit to lend additional funds to debtors whose terms have been modified in TDRs.

At December 31, 2011 and September 30, 2011, the Bank had TDRs with principal balances of \$59.2 million and \$50.5 million, respectively. The \$8.7 million increase was due primarily to restructuring of loans to current market interest rates through the Bank's loan endorsement program. For additional information regarding our TDRs, see "Note 4 – Loans Receivable and Allowance for Credit Losses." Of the \$59.2 million of TDRs at December 31, 2011, \$52.3 million were one- to four-family originated loans, and \$3.1 million were greater than 90 days delinquent and were included in the non-performing loan balance.

Impaired loans

A loan is considered impaired when, based on current information and events, it is probable that the Bank will be unable to collect all amounts due, including principal and interest, according to the contractual terms of the loan agreement. Management considers the following loans to be impaired loans: all non-accrual loans, loans classified as substandard, loans with SVAs, and TDRs that have not been performing under the new terms for 12 consecutive months or are required by the accounting literature to be classified as a TDR for the life of the loan due to a reduction in the stated interest rate to a rate lower than the current market rate for new debt with similar risk. The table below presents the composition of impaired loans, by unpaid principal balance, at the dates presented.

	December 31, 2011	September 30, 2011
	(Dollars in thousands)	
Nonaccrual loans	\$25,363	\$23,609
Performing TDRs	41,855	43,301
Nonaccrual TDRs	3,085	2,898
Other impaired loans	2,169	2,240
Total impaired loans	\$72,472	\$72,048

Allowance for credit losses and provision for credit losses

Management maintains an ACL to absorb known and inherent losses in the loan portfolio based on ongoing quarterly assessments of the loan portfolio. Our ACL methodology considers a number of quantitative and qualitative factors including: the trend and composition of our delinquent and non-performing loans, results of foreclosed property and short sale transactions (historical losses and net charge-offs), increase in and establishment of SVAs, the status and trends of the local and national economies, the trends and current conditions of the residential real estate markets, and loan portfolio growth and concentrations. Our local market areas did not experience significant fluctuations in home values over the past ten years as did other areas of the U.S., which is reflected in our charge-off experience for originated loans as compared to purchased loans.

The ACL is maintained through provisions for credit losses which are charged to income. The provision for credit losses is established after considering the results of management's quarterly assessment of the ACL. For the first quarter of fiscal year 2012, the Company recorded a provision for credit losses of \$540 thousand, primarily a result of an increase in historical losses in the formula analysis model related to purchased loans, and partially to changing the time periods used for certain factors in the formula analysis model to reflect more recent data trends in the model. At December 31, 2011, our ACL was \$15.6 million, or 0.30% of the total loan portfolio and 54.9% of total non-performing loans. This compares with an ACL of \$15.5 million, or 0.30% of the total loan portfolio and 58.3% of total non-performing loans as of September 30, 2011. See Item 7 - "Management's Discussion and Analysis of Financial Condition and Results of Operations - Critical Accounting Policies" in the Company's Annual Report on Form 10-K for the fiscal year ended September 30, 2011 and "Note 1 - Summary of Significant Accounting Policies" for a full discussion of our ACL methodology. For additional information regarding our ACL activity during fiscal year 2011, see "Note 4 - Loans Receivable and Allowance for Credit Losses."

The following table presents the Company's allocation of the ACL to each respective loan category at December 31, 2011 and September 30, 2011. At December 31, 2011 and September 30, 2011, our ratio of ACL to non-performing loans was 54.9% and 58.3%, respectively, and our ratio of ACL to loans receivable, net was 0.30% for both periods.

As permitted by the Office of Thrift Supervision, the Bank historically established SVAs for potential loan loss amounts. Starting with the March 31, 2012 reporting period, the Bank will be required to file a Call Report with the OCC. The OCC requirements do not permit SVAs; rather, loan charge-offs are required. Management will implement a loan charge-off policy during the second quarter of fiscal year 2012 in order to be in compliance with the OCC requirements. When the charge-off policy is implemented, all SVAs recorded at December 31, 2011 (\$3.5 million) will be charged off. This will not impact the provision for credit losses in the consolidated statements of income, as the amounts were expensed in previous periods; however, it will reduce the ACL and related loan balances. The following table presents ratios related to the ACL balance at December 31, 2011 and ACL activity during the current quarter, along with adjusted ratios as if all SVAs at December 31, 2011 (\$3.5 million) would have been charged-off at December 31, 2011.

	For the Three Months Ended December 31, 2011	
Ratio of net charge-offs during the period to average loans outstanding during the period	0.01	%
Ratio of net charge-offs during the period to average loans outstanding during the period – adjusted for SVAs (1)	0.08	
Ratio of net charge-offs during the period to average non-performing assets	1.03	
Ratio of net charge-offs during the period to average non-performing assets – adjusted for SVAs (1)	10.40	
	At December 31, 2011	
ACL to non-performing loans at period end	54.86	%
ACL to non-performing loans at period end – adjusted for SVAs (1)	46.69	
ACL to loans receivable, net at period end	0.30	
ACL to loans receivable, net at period end – adjusted for SVAs (1)	0.23	

(1) These ratios are not presented in accordance with GAAP, as they are presented as if the \$3.5 million of SVAs at December 31, 2011 would have been charged-off at December 31, 2011. Management believes it is important to present the non-GAAP ratios due to the significance of those charge-offs to these ratios given that the SVAs will be charged off during the second quarter of fiscal year 2012.

Securities. The following table presents the distribution of our MBS and investment securities portfolios, at amortized cost, at the dates indicated. Overall, fixed-rate securities comprised 76% of these portfolios at December 31, 2011. The WAL is the estimated remaining maturity (in years) after projected prepayment speeds and projected call option assumptions have been applied. The decrease in the WAL between September 30, 2011 and December 31, 2011 was due primarily to a decrease in interest rates between periods. This decrease in interest rates resulted in an increase in the prepayment expectations for the MBS. The decrease in the yield between September 30, 2011 and December 31, 2011 was primarily a result of the purchase of MBS at market rates which resulted in average yields lower than that of the existing portfolios, repayments of MBS with yields higher than that of the existing portfolio, and adjustable-rate MBS resetting to lower coupons due to a decline in related indices. Yields on tax-exempt securities are not calculated on a taxable equivalent basis.

	December 31, 2011			September 30, 2011			December 31, 2010		
	Balance	Yield	WAL	Balance	Yield	WAL	Balance	Yield	WAL
	(Dollars in thousands)								
Fixed-rate securities:

Municipal bonds	59,091	3.01	2.07	59,622	3.02	2.29	65,624	2.96	2.84
Total fixed-rate securities	2,779,078	2.31	2.35	2,916,310	2.36	2.59	2,288,630	2.43	2.03
Adjustable-rate securities:									
MBS	874,983	2.87	7.45	893,655	2.85	7.07	705,640	3.35	6.16
Trust preferred securities	3,547	1.80	25.48	3,681	1.60	25.73	3,715	1.56	26.47
Total adjustable-rate securities	878,530	2.87	7.52	897,336	2.85	7.17	709,355	3.34	6.26
Total securities portfolio, at amortized cost	\$ 3,657,608	2.44 %	3.59	\$ 3,813,646	2.47 %	3.67	\$ 2,997,985	2.65 %	3.04

At December 31, 2011, Capitol Federal Financial, Inc., at the holding company level, had \$271.8 million in investment securities with a yield of 0.49% and a WAL of 0.46 years. All of the securities are classified as AFS. The securities have laddered maturities in order to provide cash flows that can be used to pay dividends, repurchase stock, reinvest into higher yielding assets if interest rates rise, or pursue other corporate strategies, as deemed appropriate. The yields on these securities are less than the yields on the Bank's current investment portfolio due to the short-term nature of the securities.

Mortgage-Backed Securities. The balance of MBS, which primarily consists of securities of U.S. GSEs, remained relatively flat at \$2.41 billion at September 30, 2011 and December 31, 2011. The following table provides a summary of the activity in our portfolio of MBS for the periods presented. The yields and WAL for purchases are presented as recorded at the time of purchase. The yields for the beginning balances are as of the last day of the period previous to the period presented and the yield for the ending balances are as of the last day of the period presented and are generally derived from recent prepayment activity on the securities in the portfolio as of the dates presented. The yield of the MBS portfolio decreased from September 30, 2011 to December 31, 2011 as a result of purchases of securities with yields lower than the existing portfolio, the maturity and repayment of securities with higher yields than the overall portfolio, and adjustable-rate MBS resetting to lower coupons due to a decline in related indices, which are generally based upon short-term interest rates. The beginning and ending WAL is the estimated remaining maturity (in years) after projected prepayment speeds have been applied. The decrease in the WAL at December 31, 2011 compared to September 30, 2011 was due to the decrease in long-term interest rates between periods which resulted in an increase in prepayment expectations, thereby shortening the WAL of the related securities. The decrease in the WAL was also due to purchases since September 30, 2011 with a WAL of 4.2 years.

The following table presents our fixed-rate MBS portfolio, at amortized cost, based on the underlying weighted average loan rate, the annualized prepayment speeds for the quarter ended December 31, 2011, and the net premium/discount by interest rate tier. Our fixed-rate MBS portfolio is somewhat less sensitive than our fixed-rate one- to four-family loan portfolio to repricing risk due to external refinancing barriers such as unemployment, income changes, and decreases in property values, which are generally more pronounced outside of our local market areas. However, we are unable to control the interest rates and/or governmental programs that could impact the loans in our fixed-rate MBS portfolio, and are therefore more likely to experience reinvestment risk due to principal prepayments. Additionally, prepayments impact the amortization/accretion of premiums/discounts on our MBS portfolio. As prepayments increase, the related premiums/discounts are amortized/accreted at a faster rate. The amortization of premiums decreases interest income while the accretion of discounts increases interest income. As noted in the table below, the fixed-rate MBS portfolio had a net premium of \$11.6 million as of December 31, 2011. Given that the weighted average coupon on the underlying loans in this portfolio are above current market rates, the Bank could experience an increase in the premium amortization should prepayment speeds increase significantly, potentially reducing future interest income.

Investment Securities. Investment securities, which consist of U.S. GSE debentures (primarily issued by FNMA, FHLMC, or FHLB) and municipal investments, decreased \$150.0 million, from \$1.44 billion at September 30, 2011 to \$1.29 billion at December 31, 2011. The following tables provide a summary of the activity of investment securities for the periods presented. The yields for the beginning balances are as of the last day of the period previous to the period presented and the yield for the ending balances are as of the last day of the period presented. The increase in the yield at December 31, 2011 compared to September 30, 2011 was a result of purchases of securities with yields higher than the overall portfolio yield and maturities of securities with yields lower than the overall portfolio yield. The beginning and ending WALs represent the estimated remaining maturity (in years) of the securities after projected call dates have been considered, based upon market rates at each date presented. The WAL at December 31, 2011 decreased slightly from September 30, 2011, due primarily to the passing of time, partially offset by purchases of securities with a WAL longer than the remaining portfolio.

Liabilities. Total liabilities decreased \$21.5 million, from \$7.51 billion at September 30, 2011 to \$7.49 billion at December 31, 2011, due primarily to a decrease of \$32.9 million in escrow funds resulting from the payment of real estate taxes and insurance on behalf of our borrowers.

Deposits – Deposits increased \$6.0 million between September 30, 2011 and December 31, 2011, due to growth in the money market and checking portfolios. The money market portfolio increased \$24.4 million from \$1.07 billion at September 30, 2011 to \$1.09 billion at December 31, 2011. The increase in the money market portfolio was due to customers reinvesting funds from maturing certificates of deposit into the money market portfolio and some customers maintaining higher cash balances due to the current economic uncertainty and in anticipation of market rates increasing, which would provide flexibility to reinvest at higher rates, when available. The checking portfolio increased \$23.3 million from \$551.6 million at September 30, 2011 to \$574.9 million at December 31, 2011. The increase in our checking portfolio was also due to customers keeping more cash readily available, as reflected by a 4.5% increase in the average customer checking account balance between period ends. If interest rates were to rise, it is possible our money market and checking account customers may move those funds to higher-yielding deposit products inside of the Bank or withdraw their funds to invest in higher yielding investments outside of the Bank.

The following table presents the amount, average rate and percentage of total deposits for checking, savings, money market and certificates at the periods presented.

	December 31, 2011				September 30, 2011				December 31, 2010			
	Amount	Average Rate	% of Total		Amount	Average Rate	% of Total		Amount	Average Rate	% of Total	
(Dollars in thousands)												
Checking	\$574,854	0.08 %	12.8 %		\$551,632	0.08 %	12.3 %		\$524,208	0.08 %	11.2 %	
Savings	252,223	0.15	5.6		253,184	0.41	5.6		234,810	0.53	5.0	
Money market	1,090,510	0.35	24.2		1,066,065	0.35	23.7		1,014,451	0.58	21.7	
Certificates of deposit less than \$100,000	1,702,129	1.75	37.8		1,741,485	1.91	38.8		1,821,819	2.30	38.9	
Certificates of deposit of \$100,000 or more	881,428	1.65	19.6		882,807	1.80	19.6		1,086,813	1.71	23.2	
	\$4,501,144	1.09 %	100.0 %		\$4,495,173	1.21 %	100.0 %		\$4,682,101	1.45 %	100.0 %	

At December 31, 2011, \$83.7 million in certificates were brokered deposits, unchanged from September 30, 2011. The \$83.7 million of brokered deposits at December 31, 2011 had a weighted average rate of 2.58% and a remaining term to maturity of 2.6 years. The Bank monitors the cost of brokered deposits and considers them as a potential source of funding, provided that investment opportunities are balanced with the funding cost. As of December 31, 2011, \$126.2 million in certificates were public unit deposits, compared to \$106.4 million in public unit deposits at September 30, 2011. The \$126.2 million of public unit deposits at December 31, 2011 had a weighted average rate of 0.32% and a remaining term to maturity of six months. Management will continue to monitor the wholesale deposit market for attractive opportunities relative to the use of proceeds for investments.

The following tables set forth maturity information for our certificate of deposit portfolio at December 31, 2011.

	Amount Due				Total

Borrowings –The following table presents FHLB advance and repurchase agreement activity for the periods presented. The rate presented is the contractual rate, and the weighted average maturity (“WAM”) is the remaining weighted average contractual term in months.

	For the Three Months Ended										
	December 31, 2011			September 30, 2011			June 30, 2011			March 31, 2011	
	Amount	Rate	WAM	Amount	Rate	WAM	Amount	Rate	WAM	Amount	Rate
	(Dollars in thousands)										
Beginning principal balance	\$2,915,000	3.48%	36.02	\$3,041,000	3.53%	37.48	\$2,966,000	3.55%	38.60	\$2,991,000	3.54%
Maturities and prepayments:											
FHLB advances	(100,000)	3.94		(76,000)	5.31		--	--		--	--
Repurchase agreements	(150,000)	4.41		(50,000)	3.83		(25,000)	2.79		(25,000)	2.94
New borrowings:											
FHLB advances (fixed-rate)	250,000	0.84	35.23	--	--	--	100,000	2.82	84.00	--	--
Repurchase agreements	--			--	--	--	--	--	--	--	--
Ending principal balance	\$2,915,000	3.19%	36.10	\$2,915,000	3.48%	36.02	\$3,041,000	3.53%	37.48	\$2,966,000	3.55%

Subsequent to December 31, 2011, the Bank prepaid a \$200.0 million fixed-rate FHLB advance with an interest rate of 3.88% and a remaining term to maturity of 15 months. The prepaid FHLB advance was replaced with a \$200.0 million fixed-rate FHLB advance, with a contractual interest rate of 0.86% and a term of 46 months. The Bank paid a \$7.9 million penalty to the FHLB as a result of prepaying the FHLB advance. The prepayment penalty will be deferred as the new advance is not substantially different from the prepaid advance. The prepayment penalty will be recognized in interest expense over the life of the new advance and thereby will effectively increase the interest rate on the new advance 99 basis points, at the time of the transaction. The benefit of the refinance will be recognized in the form of an immediate decrease in interest expense, and a decrease in interest rate sensitivity to rising rates, as the maturity of the refinanced advance was extended at a lower rate.

The following table presents the maturity of FHLB advances, at par, and repurchase agreements as of December 31, 2011. The balance of FHLB advances excludes the deferred gain on the terminated interest rate swaps and the deferred prepayment penalty. Management will continue to monitor the Bank's investment opportunities and balance those opportunities with the cost of FHLB advances or other funding sources.

Maturity by Fiscal year	FHLB	Repurchase	Weighted	Weighted
	Advances	Agreements	Average	Average
	Amount	Amount	Contractual	Effective
	(Dollars in thousands)		Rate	Rate(1)
2012	\$ 250,000	\$ -	3.12	% 3.12
2013	525,000	145,000	3.74	4.00
2014	450,000	100,000	3.33	3.96
2015	450,000	20,000	2.08	2.40
2016	275,000	--	3.86	4.39
2017	400,000	--	3.17	3.21
2018	200,000	100,000	2.90	2.90
	\$2,550,000	\$ 365,000	3.19	% 3.47 %

(1) The effective rate includes the net impact of the amortization of deferred prepayment penalties resulting from the prepayment of certain FHLB advances and deferred gains related to the termination of interest rate swaps.

The following table presents the maturity of FHLB advances and repurchase agreements for the next four quarters as of December 31, 2011.

December 31, 2012	100,000	3.06	
	\$ 350,000	3.10	%

Stockholders' Equity. Stockholders' equity decreased \$8.2 million, from \$1.94 billion at September 30, 2011 to \$1.93 billion at December 31, 2011. The decrease was due primarily to dividends paid of \$28.3 million, partially offset by net income of \$18.8 million. The \$28.3 million of dividend payments consisted of a quarterly dividend of \$12.1 million and a special dividend of \$16.2 million related to fiscal year 2011 earnings, per the Company's dividend policy. The special year-end dividend is the result of the Board of Directors' commitment to distribute to stockholders 100% of the annual earnings, excluding the contribution to the Foundation, of Capitol Federal Financial, Inc. for the first two fiscal years following the second-step stock conversion. Dividend payments depend upon a number of factors including the Company's financial condition and results of operations, the Bank's regulatory capital requirements, regulatory limitations on the Bank's ability to make capital distributions to the Company, and the amount of cash at the holding company. On January 24, 2012, the Company declared a quarterly cash dividend of \$0.075 per share, which will equate to approximately \$12.1 million, payable on February 17, 2012.

On December 21, 2011, the Company announced that the Board of Directors authorized the repurchase of up to \$193.0 million of the Company's common stock. Since that date there have been no repurchases of the Company's stock. It is the intent of management to be disciplined and purchase stock at a price reflective of its trading range following the Company's second-step conversion. Management regularly considers the movement of the stocks of other banks and bank indices in its consideration of the price to pay to repurchase stock. This plan has no expiration date.

At the annual meeting of stockholders on January 24, 2012, the proposal for the stock benefits plan was approved by our stockholders. It is expected that awards to be granted under the plan will primarily be restricted stock and stock option grants. While no timetable has been established for the first awards granted under the plan, it is likely the grants will start to be made during the quarter ending June 30, 2012. In addition, it is likely that the size of the initial grants will be smaller than those typically seen in a thrift conversion and the term of the vesting shorter, in which case generally 100% of the equity shares are granted immediately and the vesting term is five years. The Stock Benefits Committee intends to make grants as an incentive to management and not solely as a reward for prior service.

The following table presents quarterly dividends paid in calendar years 2012, 2011, and 2010. For the quarter ended March 31, 2012, the table below does not present the actual dividend payout, but rather management's estimate of the dividend payout as of January 30, 2012.

	Calendar Year

Comparison of Operating Results for the Quarter Ended December 31, 2011 and 2010

Net income for the quarter ended December 31, 2011 was \$18.8 million, compared to a net loss of \$11.3 million for the quarter ended December 31, 2010. The \$30.1 million increase for the current quarter was due primarily to the \$40.0 million (\$26.0 million, net of income tax benefit) contribution to the Capitol Federal Foundation (the "Foundation") in connection with the corporate reorganization in December 2010. Additionally, net interest income increased \$5.4 million, or 13.4%, from \$40.0 million for the quarter ended December 31, 2010 to \$45.4 million for the current quarter. The increase in net interest income was due primarily to a decrease in interest expense of \$7.8 million, or 16.5%, partially offset by a decrease in interest income of \$2.4 million, or 2.8%.

Non-GAAP Presentation

The following table presents selected financial results and performance ratios for the Company for the quarters ended December 31, 2011 and 2010. Because of the magnitude and non-recurring nature of the \$40.0 million contribution to the Foundation in connection with the corporate reorganization in December 2010, management believes it is important for comparability purposes to present selected financial results and performance ratios excluding the contribution to the Foundation. The adjusted financial results and ratios for the quarter ended December 31, 2010 are not presented in accordance with GAAP.

	For the Three Months Ended			
	December 31, 2011	Actual (GAAP)	Contribution to Foundation	Adjusted (1) (Non-GAAP)
December 31, 2010				
(Dollars in thousands, except per share data)				
Net income (loss)	\$18,789	\$(11,258)	\$(26,000)	\$ 14,742
Operating expenses	22,067	63,338	40,000	23,338
Basic earnings (loss) per share	0.12	(0.07)	(0.16)	0.09
Diluted earnings (loss) per share	0.12	(0.07)	(0.16)	0.09
Return on average assets (annualized)	0.80 %	(0.51) %	(1.18) %	0.67 %
Return on average equity (annualized)	3.87	(4.13)	(9.54)	5.41
Operating expense ratio	0.94	2.89	1.83	1.07
Efficiency ratio	42.83 %	136.73 %	86.35 %	50.38 %

(1) The adjusted financial results and ratios are not presented in accordance with GAAP as the amounts and ratios exclude the effect of the contribution to the Foundation, net of income tax benefit. The contribution to the Foundation of \$26.0 million takes into account the \$14.0 million of income tax benefit associated with the \$40.0 million contribution.

Interest and Dividend Income

Total interest and dividend income for the quarter ended December 31, 2011 was \$84.8 million compared to \$87.2 million for the quarter ended December 31, 2010. The \$2.4 million, or 2.8%, decrease was primarily a result of a decrease in interest income on loans receivable of \$5.2 million, or 8.0%, partially offset by an increase in interest income on MBS of \$3.0 million, or 19.0%.

Interest income on loans receivable for the quarter ended December 31, 2011 was \$60.7 million compared to \$65.9 million for the prior year period. The \$5.2 million, or 8.0%, decrease in interest income was the result of a 46 basis point decrease in the average yield to 4.67% for the period, partially offset by an increase of \$54.4 million in the average balance of the portfolio. The decrease in the weighted average yield was due to loan endorsements, ARMs repricing down to lower market rates, refinances, loan originations at current market rates below that of the existing portfolio, and repayment of loans with rates higher than the portfolio.

Interest income on MBS for the quarter ended December 31, 2011 was \$18.4 million compared to \$15.4 million for the prior year period. The \$3.0 million, or 19.0%, increase was a result of an increase in the average balance of the

portfolio of \$778.2 million, partially offset by a decrease of 76 basis points in the weighted average yield to 3.09% for the current quarter. The increase in the average balance was a result of purchases funded primarily by the proceeds from the corporate reorganization in December 2010. The weighted average yield decreased between the two periods due to purchases of MBS at market rates which resulted in a lower average yield than the existing portfolio between the two periods, repayments on MBS with yields higher than the existing portfolio, and adjustable-rate securities repricing to lower market rates.

Interest Expense

Interest expense decreased \$7.7 million, or 16.5%, to \$39.5 million for the current quarter, from \$47.2 million for the prior year quarter. The decrease in interest expense was due primarily to a decrease in interest expense on certificates of deposit and repurchase agreements.

Interest expense on deposits for the quarter ended December 31, 2011 was \$12.8 million compared to \$17.4 million for the prior year period. The \$4.6 million, or 26.4%, decrease in interest expense on deposits was due primarily to a decrease in the weighted average

rate and average balance of the certificate of deposit portfolio. The weighted average rate paid on certificates of deposit decreased by 44 basis points, from 2.21% for the prior year quarter to 1.77% for the current year quarter, as the portfolio continued to reprice to lower market rates. The \$187.3 million decrease in the average balance was primarily in medium and short-term certificates, partially offset by an increase in long-term certificates, as management competitively priced our longer term certificates in order to lengthen the weighted average maturity of the retail certificate of deposit portfolio in this lower rate environment. Additionally, there was an increase in the money market portfolio, as some maturing certificates were reinvested into the money market portfolio.

Interest expense on FHLB advances was \$22.3 million for the current quarter compared to \$23.1 million in the prior year quarter. The \$792 thousand, or 3.4%, decrease in interest expense was due to a 29 basis point decrease in the weighted average rate on FHLB advances to 3.62% for the quarter, partially offset by an increase of \$96.9 million in the average balance of FHLB advances. The decrease in the average rate was due to \$350.0 million of new advances with a weighted average rate of 1.41% and to the maturity of \$176.0 million of advance at a weighted average rate of 4.53%. See additional information regarding borrowing activity under "Financial Condition - Liabilities."

Interest expense on other borrowings was \$4.3 million for the current quarter compared to \$6.7 million in the prior year quarter. The \$2.4 million, or 35.7%, decrease in interest expense was due to a \$181.0 million decrease in the average balance of repurchase agreements, and the repayment of the Junior Subordinated Deferrable Interest Debentures. Between periods, \$250.0 million of repurchase agreements matured and were not replaced; rather, they were repaid with FHLB advances.

Net Interest Margin

The net interest margin, which is calculated as the difference between interest income and interest expense divided by average interest-earning assets, increased 10 basis points, from 1.88% for the quarter ended December 31, 2010 to 1.98% for the quarter ended December 31, 2011, largely due to the decrease in interest expense on the certificate of deposit portfolio and other borrowings.

Provision for Credit Losses

The Bank recorded a provision for credit losses of \$540 thousand during the current quarter, compared to a provision of \$650 thousand for the prior year quarter. The provision recorded in the current quarter was primarily a result of an increase in historical losses in the formula analysis model related to purchased loans, and partially to changing the time periods used for certain factors in the formula analysis model to reflect more recent data trends in the model. Included in historical losses are SVAs, which, in prior quarters, were adjusted for delinquent loan trends. In the current quarter, the entire SVA balance was included in historical losses. This change was made in anticipation of the Bank charging off SVAs during the second quarter of fiscal year 2012 when the Bank is required to file a Call Report with the OCC. OCC-regulated institutions are required to charge-off loan impairments rather than establishing SVAs, as was allowed by the Office of Thrift Supervision.

Other Income and Expense

Total other income remained relatively unchanged between periods at \$6.2 million for the current quarter compared to \$6.3 million for the prior year quarter.

Total other expenses for the quarter ended December 31, 2011 were \$22.1 million, compared to \$63.3 million in the prior year period. The \$41.2 million, or 65.2%, decrease was due to a \$40.0 million cash contribution to the Foundation in connection with the corporate reorganization. Other expenses, net decreased \$1.3 million, or 31.5%, primarily due to an impairment and valuation allowance taken on the mortgage-servicing rights asset in the prior year quarter and a decrease in expenses related to REO operations, partially offset by an increase in expenses related to our low-income housing partnerships.

In February 2011, the Federal Deposit Insurance Corporation adopted a new assessment structure for insured institutions effective April 2011. One of the significant changes includes using average total Bank consolidated assets minus average tangible equity for the assessment base instead of average deposits and secured liabilities for the period. As a result of the change, the deposit insurance assessment is anticipated to decrease by approximately \$700 thousand in fiscal year 2012, as compared to fiscal year 2011.

Income Tax Expense

Income tax expense for the quarter ended December 31, 2011 was \$10.1 million compared to income tax benefit of \$6.4 million for the prior year period. The increase in income tax expense between the periods was primarily a result of the \$40.0 million contribution to the Foundation, which resulted in \$14.0 million of income tax benefit. The effective tax rate for the current quarter was 35.0% compared to 36.3% in the prior year quarter. The decrease in the effective tax rate between periods was due to a pre-tax loss in the prior year quarter compared to pre-tax income in the current quarter.

Average Balance Sheet

The following table presents the average balances of our assets, liabilities and stockholders' equity and the related annualized yields and rates on our interest-earning assets and interest-bearing liabilities for the periods indicated and the weighted average yield/rate on our interest-earning assets and interest-bearing liabilities at December 31, 2011. Average yields are derived by dividing annualized income by the average balance of the related assets and average rates are derived by dividing annualized expense by the average balance of the related liabilities, for the periods shown. Average outstanding balances are derived from average daily balances. The yields and rates include amortization of fees, costs, premiums and discounts which are considered adjustments to yields/rates. Yields on tax-exempt securities were not calculated on a tax-equivalent basis.

(1) Calculated net of unearned loan fees and deferred costs, and undisbursed loan funds. Non-accruing loans are included in the loans receivable average balance with a yield of zero percent. Balances include LHFS.

(2) MBS and investment securities classified as AFS are stated at amortized cost, adjusted for unamortized purchase premiums or discounts.

(3) The average balance of investment securities includes an average balance of nontaxable securities of \$58.8 million and \$68.4 million for the three-month periods ended December 31, 2011 and December 31, 2010, respectively.

(4) FHLB advances are stated net of deferred gains and deferred prepayment penalties.

(5) Net interest income represents the difference between interest income earned on interest-earning assets, such as mortgage loans, investment securities, and MBS, and interest paid on interest-bearing liabilities, such as deposits, FHLB advances, and other borrowings. Net interest income depends on the balance of interest-earning assets and interest-bearing liabilities, and the interest rates earned or paid on them.

(6) Net interest rate spread represents the difference between the average yield on interest-earning assets and the average cost of interest-bearing liabilities.

(7) Net interest margin represents net interest income as a percentage of average interest-earning assets.

Rate/Volume Analysis

The table below presents the dollar amount of changes in interest income and interest expense for major components of interest-earning assets and interest-bearing liabilities, comparing the three months ended December 31, 2011 to the three months ended December 31, 2010. For each category of interest-earning assets and interest-bearing liabilities, information is provided on changes attributable to (1) changes in volume, which are changes in the average balance multiplied by the previous year's average rate and (2) changes in rate, which are changes in the average rate multiplied by the average balance from the previous year. The net changes attributable to the combined impact of both rate and volume have been allocated proportionately to the changes due to volume and the changes due to rate.

Comparison of Operating Results for the Three Months Ended December 31, 2011 and September 30, 2011

For the quarter ended December 31, 2011, the Company recognized net income of \$18.8 million, compared to net income of \$16.8 million for the quarter ended September 30, 2011. The \$2.0 million, or 12.1%, increase in net income was due primarily to an increase in net interest income of \$1.4 million, or 3.4%, and decreases in the provision for credit losses of \$1.1 million, or 67.3%, and other expenses of \$955 thousand, or 4.2%, partially offset by an increase in income tax expense of \$1.3 million, or 14.3%.

Interest and Dividend Income

Total interest and dividend income for the current quarter was \$84.8 million compared to \$86.6 million for the quarter ended September 30, 2011. The \$1.8 million, or 2.0%, decrease was primarily a result of decreases in interest income on loans receivable and MBS.

Interest income on loans receivable for the current quarter was \$60.7 million compared to \$62.0 million for the prior quarter. The \$1.3 million, or 2.2%, decrease in interest income was due to a 13 basis point decrease in the weighted average yield to 4.67% for the current quarter, partially offset by an increase of \$23.3 million in the average balance of the portfolio. The decrease in the weighted average yield was due primarily to a significant amount of loan endorsements, refinances, and ARM loans repricing to the current lower rates during the current quarter, originations and purchases at market rates which were lower than the existing portfolio, and, to a lesser extent,

principal repayments of loans with yields higher than the remaining portfolio. The increase in the average balance was due to originations and purchases. See additional discussion regarding loan portfolio activity in “Financial Condition – Loans Receivable.”

Interest income on MBS for the current quarter was \$18.4 million compared to \$19.0 million for the prior quarter. The \$580 thousand, or 3.1%, decrease was due to a decrease of 17 basis points in the average yield to 3.09%, partially offset by an increase of \$55.4 million in the average balance of the portfolio. The decrease in the weighted average yield between the two periods was due primarily to purchases of MBS at market rates which resulted in a lower average yield than the existing portfolio between the two periods, and repayments on MBS with yields higher than the remaining portfolio, and ARMs repricing.

Interest Expense

Total interest expense decreased \$3.2 million, or 7.7%, to \$39.5 million for the current quarter from \$42.7 million for the prior quarter. The decrease in interest expense was due primarily to a \$1.8 million, or 12.4%, decrease in interest expense on deposits and a \$1.1 million, or 20.9%, decrease in interest expense on other borrowings.

Interest expense on deposits for the current quarter was \$12.8 million compared to \$14.6 million for the prior quarter. The \$1.8 million, or 12.4%, decrease in interest expense on deposits was due primarily to a decrease in the average rate paid on the certificate of deposit portfolio, as the portfolio continued to reprice to lower market rates, as well as a decrease in the average balance. The average rate paid on the certificate of deposit portfolio decreased 17 basis points between the two periods, from 1.94% for the prior quarter to 1.77% for the current quarter. The average balance of the certificate of deposit portfolio decreased by \$78.8 million, partially offset by increases in the money market and checking portfolios, for a total average decrease of \$64.7 million. See additional discussion of the deposit portfolio in “Financial Condition – Deposits.”

Interest expense on FHLB advances was \$22.3 million for the current quarter compared to \$22.7 million in the prior quarter. The \$321 thousand decrease in interest expense was due to a 10 basis point decrease in the weighted average rate on FHLB advances to 3.62% for the current quarter, partially offset by an increase of \$33.1 million in the average balance. During the current quarter, a \$100.0 million fixed-rate FHLB advance with a contractual rate of 3.94% matured. The FHLB advances and repurchase agreements that matured during the current quarter were replaced with \$250.0 million of fixed-rate FHLB advances with a weighted average contractual interest rate of 0.84%. See additional information regarding borrowing activity under “Financial Condition - Liabilities.”

Interest expense on other borrowings for the current quarter was \$4.3 million compared to \$5.5 million for the prior quarter. The \$1.2 million, or 20.9%, decrease in interest expense on other borrowings was primarily due to a decrease in the average balance of \$102.4 million due to the maturity of \$150.0 million of repurchase agreements that were replaced with FHLB advances.

Net Interest Margin

The net interest margin for the current quarter was 1.98% compared to 1.89% for the prior quarter. The nine basis point increase in the net interest margin was largely due to the decrease in interest expense on interest-bearing liabilities. The decrease in interest expense on interest-bearing liabilities was due primarily to a 14 basis point decrease in the average rate paid on the deposit portfolio and an 11 basis point decrease in the average rate paid on borrowings.

During the past two quarters, our net interest margin has improved. However, the historically low market interest rates, as reflected by the absolute level and shape of the yield curve, could potentially have a negative impact to the Company’s net interest margin during future periods if long-term market rates decrease further. Mortgage endorsements and refinances are expected to continue over the course of the upcoming year, which could result in

margin compression. Interest rates have decreased significantly during the past year and the yield curve has flattened as a result of mixed economic data, uncertainty about the resolution of the European debt crisis, uncertainty about fiscal actions by the U.S. Congress and additional monetary policy announcements by the Federal Reserve. In the fourth quarter of fiscal year 2011, the two-year Treasury yield decreased approximately 20 basis points while the 10-year Treasury yield decreased approximately 125 basis points. Both yields have remained at or near these levels through the first quarter of fiscal year 2012. Historically, the Bank has benefited from a steeper yield curve as the Bank's mortgages are typically priced from long-term rates while deposits are priced from short-term rates. A steeper yield curve, one with a greater difference between short-term rates and long-term rates, allows the Bank to receive a higher rate of interest on our mortgage-related assets than the rate paid for the funding for those assets,

which generally results in a higher net interest margin. As the yield curve flattens, the spread between rates received on assets and paid on liabilities becomes compressed, which generally leads to a decrease in net interest margin.

Interest-earning assets repricing to lower rates at a faster pace than interest-bearing liabilities can result in net interest margin compression. At December 31, 2011, the Bank's one-year gap between interest-earning assets and interest-bearing liabilities was \$1.72 billion, or 18.8% of total assets. If we experience the magnitude of asset repricing as indicated in the gap table, under Part 1, Item 3 of this Form 10-Q, downward pressure may be placed on our net interest margin. Should interest rates rise, the amount of interest-earning assets expected to reprice will likely decrease from stated levels as borrowers and agency debt issuers will have less economic incentive to modify their costs of borrowing. If interest rates were to increase 200 basis points, the Bank's one-year gap would be \$146.4 million, or 1.6% of total assets. The amount of interest-bearing liabilities expected to reprice in a given period is not usually impacted by changes in interest rates because the Bank's borrowings and certificate of deposit portfolios have contractual maturities and generally cannot be terminated early. The majority of interest-earning assets anticipated to reprice in fiscal year 2012 are mortgages and MBS, both of which have the option to prepay and/or refinance or endorse to prevailing market interest rates. As interest rates decrease, borrowers have an economic incentive to refinance or endorse their loans to the lower market interest rates. Doing so significantly increases the amount of cash flows anticipated to reprice to lower market interest rates during future periods. This was evident by the volume of mortgages that were endorsed or refinanced during fiscal year 2011 as a result of the decrease in market interest rates. In addition, cash flows from the Bank's callable investment securities are anticipated to increase during fiscal year 2012 as the issuers of these securities will likely exercise their option to call the securities in order to issue new debt securities at the lower market rates. The decrease in the net interest margin due to interest-earning assets repricing downward will likely be partially offset by a further decrease in our cost of funds. For information regarding interest rate risk management, see "Item 3. Quantitative and Qualitative Disclosure About Market Risk."

Provision for Credit Losses

The Bank recorded a provision for credit losses of \$540 thousand during the current quarter, compared to a provision of \$1.7 million for the quarter ended September 30, 2011. The provision recorded in the current quarter was primarily a result of an increase in historical losses in the formula analysis model related to purchased loans, and partially a result of changing the time periods used for certain factors in the formula analysis model to reflect more recent data trends in the model.

Other Income and Expense

Total other income remained relatively unchanged between quarters. Total other expense was \$22.1 million for the current quarter compared to \$23.0 million for the prior quarter. The \$955 thousand, or 4.2%, decrease was primarily due to a decrease of \$1.2 million, or 10.4%, in salaries and employee benefits due to a decrease in compensation expense related to the "welcome" dividend paid in March 2011, on unallocated ESOP shares, along with small declines in deposit and loan transactions costs, regulatory and outside services and advertising and promotional expenses. The decreases were partially offset by a \$1.0 million, or 55.7%, increase in other expenses, net due to an increase in expenses related to our low-income housing partnerships and an increase in expenses associated with REO operations.

Income Tax Expense

Income tax expense was \$10.1 million for the current quarter, compared to \$8.9 million for the prior quarter. The effective tax rate for the current quarter was 35.0% compared to 34.6% for the prior quarter. Management anticipates the effective tax rate for fiscal year 2012 to be approximately 36%.

Average Balance Sheet

As mentioned above, average yields are derived by dividing annualized income by the average balance of the related assets and average rates are derived by dividing annualized expense by the average balance of the related liabilities, for the periods shown. Average outstanding balances are derived from average daily balances. The yields and rates include amortization of fees, costs, premiums and discounts which are considered adjustments to yields/rates. Yields on tax-exempt securities were not calculated on a tax-equivalent basis.

(1) Calculated net of unearned loan fees and deferred costs, and undisbursed loan funds. Non-accruing loans are included in the loans receivable average balance with a yield of zero percent. Balances include LHFS.

(2) MBS and investment securities classified as AFS are stated at amortized cost, adjusted for unamortized purchase premiums or discounts.

(3) The average balance of investment securities includes an average balance of nontaxable securities of \$58.8 million and \$59.8 million for the quarters ended December 31, 2011 and September 30, 2011, respectively.

(4) FHLB advances are stated net of deferred gains and deferred prepayment penalties.

(5) Net interest income represents the difference between interest income earned on interest-earning assets, such as mortgage loans, investment securities, and MBS, and interest paid on interest-bearing liabilities, such as deposits, FHLB advances, and other borrowings. Net interest income depends on the balance of interest-earning assets and interest-bearing liabilities, and the interest rates earned or paid on them.

(6) Net interest rate spread represents the difference between the average yield on interest-earning assets and the average cost of interest-bearing liabilities.

(7) Net interest margin represents net interest income as a percentage of average interest-earning assets.

68

Rate/Volume Analysis

The table below presents the dollar amount of changes in interest income and interest expense for major components of interest-earning assets and interest-bearing liabilities, comparing the quarter ended December 31, 2011 to the quarter ended September 30, 2011. For each category of interest-earning assets and interest-bearing liabilities, information is provided on changes attributable to (1) changes in volume, which are changes in the average balance multiplied by the previous year's average rate and (2) changes in rate, which are changes in the average rate multiplied by the average balance from the previous year. The net changes attributable to the combined impact of both rate and volume have been allocated proportionately to the changes due to volume and the changes due to rate.

Liquidity and Capital Resources

Liquidity refers to our ability to generate sufficient cash to fund ongoing operations, to pay maturing certificates of deposit and other deposit withdrawals, to repay maturing borrowings, and to fund loan commitments. Liquidity management is both a daily and long-term function of our business management. The Company's most available liquid assets are represented by cash and cash equivalents, AFS MBS and investment securities, and short-term investment securities. The Bank's primary sources of funds are deposits, FHLB advances, other borrowings, repayments and maturities of outstanding loans and MBS and other short-term investments, and funds provided by operations. The Bank's borrowings primarily have been used to invest in U.S. GSE debentures and MBS securities in an effort to manage the Bank's interest rate risk with the intent to improve the earnings of the Bank while maintaining capital ratios in excess of regulatory standards for well-capitalized financial institutions. In addition, the Bank's focus on managing risk has provided additional liquidity capacity by remaining below FHLB borrowing limits and by increasing the balance of MBS and investment securities available as collateral for borrowings.

We generally intend to maintain cash reserves sufficient to meet short-term liquidity needs, which are routinely forecasted for 10, 30, and 365 days. Additionally, on a monthly basis, we perform a liquidity stress test in accordance with the Interagency Policy Statement on Funding and Liquidity Risk Management. The liquidity stress test incorporates both short-term and long-term liquidity scenarios in order to identify periods of and to quantify liquidity risk. In the event short-term liquidity needs exceed available cash, the Bank has access to lines of credit at the FHLB and the Federal Reserve Bank. The FHLB line of credit, when combined with FHLB advances, may generally not exceed 40% of total assets. Our excess capacity at the FHLB as of December 31, 2011 was \$741.9 million, which decreased \$515.1 million from \$1.26 billion at September 30, 2011. The decrease was primarily due to the FHLB's reduction of the lending percentage on one- to four-family loans from 85% to 78% between period ends and our FHLB advance balance increasing \$150.0 million during the current quarter. The Federal Reserve Bank line of credit is based upon the fair values of the securities pledged as collateral and certain other characteristics of those securities, and is used only when other sources of short-term liquidity are unavailable. At December 31, 2011, the Bank had \$1.99 billion of securities that were eligible but unused as collateral for borrowing or other liquidity needs. This collateral amount is comprised of AFS and HTM securities with individual fair values greater than \$10.0 million, which is then reduced by a collateralization ratio of 10% to account for potential market value fluctuations. Borrowings on the lines of credit are outstanding until replaced by cash flows from long-term sources of liquidity, and are generally outstanding no longer than 30 days.

If management observes a trend in the amount and frequency of lines of credit utilization, the Bank will likely utilize long-term wholesale borrowing sources, such as FHLB advances and/or repurchase agreements, to provide permanent fixed-rate funding. The maturity of these borrowings is generally structured in such a way as to stagger maturities in order to reduce the risk of a highly negative cash flow position at maturity. Additionally, the Bank could utilize the repayment and maturity of outstanding loans, MBS and other investments for liquidity needs rather than reinvesting such funds into the related portfolios.

While scheduled payments from the amortization of loans and MBS and payments on short-term investments are relatively predictable sources of funds, deposit flows, prepayments on loans and MBS, and calls of investment securities are greatly influenced by general interest rates, economic conditions and competition, and are less predictable sources of funds. To the extent possible, the Bank manages the cash flows of its loan and deposit portfolios by the rates it offers customers.

At December 31, 2011, cash and cash equivalents totaled \$170.2 million, an increase of \$49.1 million from September 30, 2011. The increase was due to \$89.6 million of securities called towards the end of December that were not fully

reinvested by the end of the month.

During the first three months of fiscal year 2012, loan originations and purchases, net of principal repayments and related loan activity, resulted in a cash outflow of \$77.8 million, compared to a cash inflow of \$42.4 million in the same period in the prior year, as principal repayments exceeded loan originations and purchases in the prior year period. See additional discussion regarding loan activity in “Financial Condition – Loans Receivable.”

During the first three months of fiscal year 2012, the Company received principal payments on MBS of \$152.3 million and proceeds from called or matured investment securities of \$425.0 million. These funds were largely reinvested into investment securities and MBS. During the three months ended December 31, 2011, the Company purchased \$274.0 million of investment securities and \$149.4 million of MBS.

The following table presents the contractual maturity of our loan, MBS, and investment securities portfolios at December 31, 2011. Loans and securities which have adjustable interest rates are shown as maturing in the period during which the contract is due. The table does not reflect the effects of possible prepayments or enforcement of due on sale clauses.

	Loans (1)		MBS		Investment Securities		Total	
	Weighted Average		Weighted Average		Weighted Average		Weighted Average	
	Amount	Rate	Amount	Rate	Amount	Rate	Amount	Rate
(Dollars in thousands)								
Amounts due:								
Within one year	\$34,525	4.62 %	\$--	--	\$274,250	1.56 %	\$308,775	1.90 %
After one year:								
Over one to two	41,427	4.64	--	--	30,586	1.35	72,013	3.24
Over two to three	8,279	5.32	--	--	155,596	1.38	163,875	1.58
Over three to five	50,778	5.41	2,364	6.00	781,301	1.46	834,443	1.71

Over 10 to 15	1,327,122	4.16	800,865	3.33	3,284	5.24	2,131,271	3.85
After 15 years	3,443,298	4.62	1,010,355	3.15	7,125	3.35	4,460,778	4.29
Total due after one year	5,247,960	4.53	2,405,685	3.38	1,020,212	1.52	8,673,857	3.86
	\$5,282,485	4.53 %	\$2,405,685	3.38 %	\$1,294,462	1.53 %	\$8,982,632	3.79 %

(1) Demand loans, loans having no stated maturity, and overdraft loans are included in the amounts due within one year. Construction loans are reported based on the term to complete construction. The maturity date for home equity loans assumes the customer always makes the required minimum payment.

The Bank utilizes FHLB advances to provide funds for lending and investment activities. The Bank's policies allow advances up to 40% of total Bank assets. At December 31, 2011, the Bank's ratio of the face amount of advances to total assets, as reported to the OCC, was 28%. The advances are secured by a blanket pledge of our loan portfolio, as collateral, supported by quarterly reporting to the FHLB. Currently, the blanket pledge is sufficient collateral for the FHLB advances. It is possible that increases in our borrowings or decreases in our loan portfolio could require the Bank to pledge securities as collateral on the FHLB advances. The Bank relies on FHLB advances as a primary source of borrowings. The outstanding amount of FHLB advances was \$2.55 billion at December 31, 2011, of which \$350.0 million is scheduled to mature in the next 12 months. Maturing advances will likely be replaced with borrowings with terms between 36 and 60 months.

The Bank has access to and utilizes other sources for liquidity, such as secondary market repurchase agreements, brokered deposits, and public unit deposits. The Bank's policy limits total borrowings to 55% of total assets. At December 31, 2011, the Bank had repurchase agreements of \$365.0 million, none of which are scheduled to mature in the next 12 months. The Bank may enter into additional repurchase agreements as management deems appropriate, not to exceed 15% of total assets. The Bank has pledged securities with an estimated fair value of \$429.3 million as collateral for repurchase agreements at December 31, 2011. The securities pledged for the repurchase agreements will be delivered back to the Bank when the repurchase agreements mature.

As of December 31, 2011, the Bank's policy allows for brokered deposits up to 10% of total deposits and public unit deposits up to 5% of total deposits. At December 31, 2011, the Bank had brokered deposits of \$83.7 million, or approximately 2% of total deposits and public unit deposits of \$126.2 million, or approximately 3% of total deposits. Management continuously monitors the wholesale deposit market for opportunities to obtain brokered and public unit deposits at attractive rates. The Bank has pledged securities with an estimated fair value of \$133.7 million as collateral for public unit deposits. The securities pledged as collateral for public unit deposits are held under joint custody receipt by the FHLB and generally will be released upon deposit maturity.

At December 31, 2011, \$1.26 billion of the \$2.58 billion in certificates of deposit were scheduled to mature within one year. Included in the \$1.26 billion are \$102.6 million in public unit deposits scheduled to mature within the same time period. Based on our deposit retention experience and our current pricing strategy, we anticipate the majority of the maturing retail certificates of deposit will renew or transfer to other deposit products at the prevailing rate, although no assurance can be given in this regard.

As of December 31, 2011, the Bank had entered into \$10.0 million of agreements with a third party in connection with the remodeling of the Bank's home office. As of December 31, 2011, \$1.1 million of those agreements were outstanding. The existing home office building was constructed in 1961 and has been fully depreciated since 1997. The project scope includes replacement of all mechanical and electrical systems, interior finishes, and exterior building components. The completed project will result in a more energy efficient building which is expected to lower our utility and maintenance expenses. There will be additional agreements and expenses related to the project through fiscal year 2013, which is when the project is expected to be completed. Costs related to the project will be capitalized and depreciated according to the estimated useful life of the assets as they are placed in service.

Limitations on Dividends and Other Capital Distributions

Although savings and loan holding companies are not currently subject to regulatory capital requirements or specific restrictions on the payment of dividends or other capital distributions, the OCC does prescribe such restrictions on subsidiary savings associations. The OCC regulations impose restrictions on savings institutions with respect to their ability to make distributions of capital, which include dividends, stock redemptions or repurchases, cash-out mergers and other transactions charged to the capital account. In addition, the financial impact of a holding company on its subsidiary institution is a matter that is evaluated by the OCC and the agency has authority to order cessation of activities or divestiture of subsidiaries deemed to pose a threat to the safety and soundness of the institution.

Generally under OCC and FRB regulations, savings institutions, such as the Bank, may make capital distributions during any calendar year equal to earnings of the previous two calendar years and current year-to-date earnings. It is generally required under OCC and FRB regulations that the Bank remain well-capitalized before and after the proposed distribution. However, an institution deemed to be in need of more than normal supervision by the OCC and FRB may have its dividend authority restricted by the OCC and FRB. Savings institutions proposing to make any capital distribution within these limits must submit written notice to the OCC and FRB 30 days prior to such distribution. The OCC and FRB may object to the distribution during that 30-day period based on safety and soundness concerns. Savings institutions that desire to make a larger capital distribution, or are under special restrictions, or are not, or would not be, well-capitalized following a proposed capital distribution, however, must obtain OCC and FRB approval prior to making such distribution.

The long-term ability of the Company to pay dividends to its stockholders is based primarily upon the ability of the Bank to make capital distributions to the Company. So long as the Bank continues to remain "well-capitalized" after each capital distribution, operate in a safe and sound manner, provide the OCC and FRB with updated capital levels, non-performing asset balances and ACL information as requested, and comply with the interest rate risk management guidelines of the OCC and FRB, it is management's belief that the OCC and FRB will continue to allow the Bank to distribute its net income to the Company, although no assurance can be given in this regard.

In connection with the corporate reorganization, a "liquidation account" was established for the benefit of certain depositors of the Bank in an amount equal to Capitol Federal Savings Bank MHC's ownership interest in the retained earnings of Capitol Federal Financial as of June 30, 2010. Under applicable federal banking regulations, neither the Company nor the Bank is permitted to pay dividends of its capital stock to its stockholders if stockholders' equity would be reduced below the amount of the liquidation account at that time.

The Company paid cash dividends of \$28.3 million during the quarter ended December 31, 2011. The \$28.3 million of dividend payments consisted of a quarterly dividend of \$12.1 million and a special dividend of \$16.2 million related to fiscal year 2011 earnings, per the Company's dividend policy. On January 24, 2012, the Company declared a quarterly cash dividend of \$0.075 per share, which will equate to approximately \$12.1 million, payable February 17, 2012. Dividend payments depend upon a number of factors including the Company's financial condition and results of operations, the Bank's regulatory capital requirements, regulatory limitations on the Bank's ability to make capital distributions to the Company, and the amount of cash at the holding company.

At December 31, 2011, Capitol Federal Financial, Inc., at the holding company level, had \$195.9 million on deposit with the Bank and \$271.8 million in investment securities with a WAL of 0.46 years. As of December 31, 2011, \$90.1 million of these securities will mature within 90 days.

On December 21, 2011, the Company announced that the Board of Directors approved the repurchase of up to \$193.0 million of the Company's common stock. There were no stock repurchases during the current quarter. This plan has no expiration date. See additional discussion regarding loan activity in "Financial Condition – Stockholders' Equity."

Off Balance Sheet Arrangements, Commitments and Contractual Obligations

The Company, in the normal course of business, makes commitments to buy or sell assets or to incur or fund liabilities. Commitments may include, but are not limited to:

- the origination, purchase, or sale of loans,
- the purchase or sale of investment securities and MBS,
- extensions of credit on home equity loans and construction loans,
 - terms and conditions of operating leases, and
- funding withdrawals of deposit accounts at maturity.

The following table summarizes our contractual obligations and other material commitments as of December 31, 2011.

	Total	Maturity Range			
		Less than 1 year	1 - 3 years	3 - 5 years	More than 5 years
(Dollars in thousands)					
Operating leases	\$13,181	\$1,274	\$2,288	\$1,849	\$7,770
Certificates of deposit	\$2,583,557	\$1,264,476	\$934,820	\$381,503	\$2,758
Weighted average rate	1.71 %	1.38 %	1.92 %	2.33 %	2.59 %
FHLB advances	\$2,550,000	\$350,000	\$1,125,000	\$475,000	\$600,000
Weighted average rate	3.10 %	3.10 %	2.90 %	3.67 %	3.01 %
Repurchase agreements	\$365,000	\$--	\$245,000	\$20,000	\$100,000
Weighted average rate	3.83 %	-- %	3.97 %	4.45 %	3.35 %
Commitments to originate and purchase loans	\$144,182	\$144,182	\$--	\$--	\$--
Weighted average rate	3.81 %	3.81 %	-- %	-- %	-- %
Commitments to fund unused home equity lines of credit and commercial commitments	\$265,092	\$265,092	\$--	\$--	\$--
Weighted average rate	4.53 %	4.53 %	-- %	-- %	-- %
Unadvanced portion of construction loans	\$33,239	\$33,239	\$--	\$--	\$--
Weighted average rate	4.37 %	4.37 %	-- %	-- %	-- %

A percentage of commitments to originate mortgage loans are expected to expire unfunded, so the amounts reflected in the table above are not necessarily indicative of future liquidity requirements. Additionally, the Bank is not obligated to honor commitments to fund unused home equity lines of credit if a customer is delinquent or otherwise in violation of the loan agreement.

We anticipate we will continue to have sufficient funds, through repayments and maturities of loans and securities, deposits and borrowings, to meet our current commitments.

Contingencies

In the normal course of business, the Company and its subsidiary are named defendants in various lawsuits and counter claims. In the opinion of management, after consultation with legal counsel, none of the currently pending suits are expected to have a materially adverse effect on the Company's consolidated financial statements for the current interim or future periods.

Capital

Consistent with our goal to operate a sound and profitable financial organization, we actively seek to maintain a “well-capitalized” status in accordance with regulatory standards. As of December 31, 2011, the Bank exceeded all regulatory capital requirements. The following table presents the Bank’s regulatory capital ratios at December 31, 2011 based upon regulatory guidelines.

	Bank	Regulatory Requirement	For “Well-Capitalized” Status
	Ratios		
Tangible equity	15.0 %	N/A	
Tier 1 (core) capital	15.0 %	5.0 %	
Tier 1 (core) risk-based capital	37.7 %	6.0 %	
Total risk-based capital	38.1 %	10.0 %	

A reconciliation of the Bank’s equity under GAAP to regulatory capital amounts as of December 31, 2011 is as follows (dollars in thousands):

Total Bank equity as reported under GAAP	\$1,398,724
Unrealized gains on AFS securities	(26,145)
Other	(228)
Total tangible and core capital	1,372,351
ACL (1)	12,107
Total risk-based capital	\$1,384,458

(1) This amount represents the valuation allowances calculated using the formula analysis. SVAs are netted against the related loan balance on the Thrift Financial Report and are therefore not included in this amount.

Item 3. Quantitative and Qualitative Disclosure about Market Risk

For a complete discussion of the Bank's asset and liability management policies, as well as the potential impact of interest rate changes upon the market value of the Bank's portfolios, see "Management's Discussion and Analysis of Financial Condition and Results of Operations - Asset and Liability Management and Market Risk" in the Company's Annual Report to Stockholders for the year ended September 30, 2011, attached as Exhibit 13 to the Company's Annual Report on Form 10-K for the year ended September 30, 2011. The analysis presented in the tables below reflects the level of market risk at the Bank and does not include the assets at the Company, at the holding company level. Assets at the holding company are not managed in accordance with the interest rate risk objectives of the Bank. A general discussion of the impact of the holding company assets is included for each table.

The rates of interest the Bank earns on assets and pays on liabilities generally are established contractually for a period of time. Fluctuations in interest rates have a significant impact not only upon our net income, but also upon the cash flows and market values of our assets and liabilities. Our results of operations, like those of other financial institutions, are impacted by changes in interest rates and the interest rate sensitivity of our interest-earning assets and interest-bearing liabilities. Risk associated with changes in interest rates on the earnings of the Bank and the market value of its financial assets and liabilities is known as interest rate risk. Interest rate risk is our most significant market risk and our ability to adapt to changes in interest rates is known as interest rate risk management.

The general objective of our interest rate risk management program is to determine and manage an appropriate level of interest rate risk while maximizing net interest income in a manner consistent with our policy to reduce, to the extent possible, the exposure of net interest income to changes in market interest rates. The Asset and Liability Committee ("ALCO") regularly reviews the interest rate risk exposure of the Bank by forecasting the impact of hypothetical, alternative interest rate environments on net interest income and the market value of portfolio equity ("MVPE") at various dates. The MVPE is defined as the net of the present value of cash flows from existing assets, liabilities and off-balance sheet instruments. The present values are determined based upon market conditions as of the date of the analysis as well as in alternative interest rate environments providing potential changes in the MVPE under those alternative interest rate environments. Net interest income is projected in the same alternative interest rate environments, both with a static balance sheet and with management strategies considered. The MVPE and net interest income analyses are also conducted to estimate our sensitivity to rates for future time horizons based upon market conditions as of the date of the analysis. In addition to the interest rate environments presented below, management also reviews the impact of non-parallel rate shock scenarios on a quarterly basis. These scenarios consist of flattening and steepening the yield curve by changing short-term and long-term interest rates independent of each other, and simulating cash flows and valuations as a result of these hypothetical changes in rates. This analysis helps management quantify the Bank's exposure to changes in the shape of the yield curve.

For each period presented in the following table, the estimated percentage change in the Bank's net interest income based on the indicated instantaneous, parallel and permanent change in interest rates is presented. The percentage change in each interest rate environment represents the difference between estimated net interest income in the 0 basis point interest rate environment ("base case", assumes the forward market and product interest rates implied by the yield curve are realized) and estimated net interest income in each alternative interest rate environment (assumes market and product interest rates have a parallel shift in rates across all maturities by the indicated change in rates). Estimations of net interest income used in preparing the table below are based upon the assumptions that the total composition of interest-earning assets and interest-bearing liabilities does not change materially and that any repricing of assets or liabilities occurs at anticipated product and market rates for the alternative rate environments as of the dates presented. The estimation of net interest income does not include any projected gain or loss related to the sale of loans or securities, or income derived from non-interest income sources, but does include the use of different prepayment assumptions in the alternative interest rate environments. It is important to consider that the estimated changes in net interest income are for a cumulative four-quarter period. These do not reflect the earnings expectations of management.

Change (in Basis Points) in Interest Rates (1)	Percentage Change in Net Interest Income			
	At			
	December 31, 2011			September 30, 2011
-100 bp	N/A			N/A
000 bp	--			--
+100 bp	3.28	%	4.46	%
+200 bp	2.38	%	3.75	%
+300 bp	-0.29	%	-0.33	%

(1) Assumes an instantaneous, permanent and parallel change in interest rates at all maturities.

At December 31, 2011, the percentage change in the net interest income projections were slightly less sensitive to changes in interest rates than at September 30, 2011 in all interest rate environments. With interest rates remaining relatively flat between quarter ends, the change in the sensitivity of the net interest income was primarily caused by changes in the balance sheet composition. First, assets expected to reprice decreased primarily due to calls in the callable agency debenture portfolio. The cash flows from these calls were reinvested into new securities with expected repricing dates beyond the one year horizon of these net income projections. In addition, the balance of the money market portfolio increased during the current quarter. The cost of the money market portfolio is more sensitive to changes in interest rates, thus diminishing net interest income as interest rates rise.

The securities held at the holding company are short-term bullet agency debentures. The inclusion of these securities in the net interest income projection at December 31, 2011 would have resulted in a more positive impact in the rising interest rate environments due to the short-term nature of the securities. In addition, the cash flows from these securities do not change as interest rates rise. As a result, these securities would provide cash flows that could be reinvested at the higher interest rates.

The following table sets forth the estimated percentage change in the MVPE at each period end presented based on the indicated instantaneous, parallel and permanent change in interest rates. The percentage change in each interest rate environment represents the difference between the MVPE in the base case and the MVPE in each alternative interest rate environment. The estimations of the MVPE used in preparing the table below are based upon the assumptions that the total composition of interest-earning assets and interest-bearing liabilities does not change, that any repricing of assets or liabilities occurs at current product or market rates for the alternative rate environments as of the dates presented, and that different prepayment rates are used in each alternative interest rate environment. The estimated MVPE results from the valuation of cash flows from financial assets and liabilities over the anticipated lives of each for each interest rate environment. The table below presents the effects of the changes in interest rates on our assets and liabilities as they mature, repay or reprice, as shown by the change in the MVPE for alternative interest rates.

Change (in Basis Points) in Interest Rates (1)	Percentage Change in MVPE	
	At	
	December 31, 2011	September 30, 2011
-100 bp	N/A	N/A

000				
bp	--		--	
+100				
bp	0.28	%	0.61	%
+200				
bp	-6.30	%	-5.69	%
+300				
bp	-15.75	%	-14.91	%

(1) Assumes an instantaneous, permanent and parallel change in interest rates at all maturities.

Changes in the estimated market values of our financial assets and liabilities drive changes in estimates of the MVPE. Shorter term-to-maturity financial instruments are less sensitive to changes in interest rates than are longer term-to-maturity financial instruments. Because of this, our certificates of deposit (which have relatively short average lives) tend to display less sensitivity to changes in interest rates than do our mortgage-related assets (which have relatively long average lives). The average life expected on our mortgage-related assets varies under different interest rate environments because borrowers have the ability to prepay their mortgage loans.

The sensitivity of the MVPE to changes in interest rates remained relatively flat from September 30, 2011 to December 31, 2011. This was due to interest rates remaining relatively flat between quarter ends. The slight change in the sensitivity of the MVPE at December 31, 2011 as compared to September 30, 2011 was primarily caused by the repricing of existing mortgage loans to lower interest rates as a result of refinance and endorsement activity. Mortgage loans with lower coupons have a longer expected life and thus have prices that are more sensitive to changes in interest rates.

The inclusion of the holding company securities in the MVPE analysis would result in a lower level of sensitivity to the rising interest rate environments at December 31, 2011 due to their short-term nature, which would reduce the overall WAL of assets. This would cause the market value of total assets to be less sensitive to changes in interest rates, thereby reducing the sensitivity of the MVPE at December 31, 2011.

The ability to maximize net interest income is dependent largely upon the attainment of a positive interest rate spread that can be sustained despite fluctuations in prevailing interest rates. The asset and liability repricing gap is a measure of the difference between the amount of interest-earning assets and interest-bearing liabilities which either reprice or mature within a given period of time. The difference provides an indication of the extent to which an institution's interest rate spread will be affected by changes in interest rates. A gap is considered positive when the amount of interest-earning assets exceeds the amount of interest-bearing liabilities maturing or repricing during the same period. A gap is considered negative when the amount of interest-bearing liabilities exceeds the amount of interest-earning assets maturing or repricing during the same period. Generally, during a period of rising interest rates, a negative gap within shorter repricing periods adversely affects net interest income, while a positive gap within shorter repricing periods results in an increase in net interest income. During a period of falling interest rates, the opposite would generally be true.

The following gap table summarizes the anticipated maturities or repricing of the Bank's interest-earning assets and interest-bearing liabilities as of December 31, 2011, based on the information and assumptions set forth in the notes below. Cash flow projections for mortgage loans and MBS are calculated based on current interest rates. Prepayment projections are subjective in nature, involve uncertainties and assumptions and, therefore, cannot be determined with a high degree of accuracy. Although certain assets and liabilities may have similar maturities or periods to repricing, they may react differently to changes in market interest rates. Assumptions may not reflect how actual yields and costs respond to market changes. The interest rates on certain types of assets and liabilities may fluctuate in advance of changes in market interest rates, while interest rates on other types of assets and liabilities may lag behind changes in market interest rates. Certain assets, such as ARM loans, have features that restrict changes in interest rates on a short-term basis and over the life of the asset. In the event of a change in interest rates, prepayment and early withdrawal levels would likely deviate significantly from those assumed in calculating the gap table. For additional information regarding the impact of changes in interest rates, see the Percentage Change in Net Interest Income and Percentage Change in MVPE discussion and tables within this section.

Gap Table. The gap table summarizes the anticipated maturities or repricing of the Bank's interest-earning assets and interest-bearing liabilities as of December 31, 2011, based on the information and assumptions set forth in the notes below.

	Within Three Months	Three to Twelve Months	More Than One Year to Three Years	More Than Three Years to Five Years	Over Five Years	Total
(Dollars in thousands)						
Interest-earning assets:

Cumulative excess of interest-earning assets over interest-bearing liabilities as a percent of total Bank assets at						
December 31, 2011	3.41	% 18.79	% 16.61	% 18.08	% 12.10	%
September 30, 2011	0.84	18.60	18.18	18.21	12.51	

- (1) ARM loans are included in the period in which the rate is next scheduled to adjust or in the period in which repayments are expected to occur, or prepayments are expected to be received, prior to their next rate adjustment, rather than in the period in which the loans are due. Fixed-rate loans are included in the periods in which they are scheduled to be repaid, based on scheduled amortization and prepayment assumptions. Balances have been reduced for non-performing loans, which totaled \$28.4 million at December 31, 2011.
- (2) Based on contractual maturities, terms to call date or pre-refunding dates as of December 31, 2011, and excludes the unrealized gain adjustment of \$2.2 million on AFS investment securities.
- (3) Reflects estimated prepayments of MBS in our portfolio, and excludes the unrealized gain adjustment of \$39.8 million on AFS MBS.
- (4) Although the Bank's checking, savings and money market accounts are subject to immediate withdrawal, management considers a substantial amount of these accounts to be core deposits having significantly longer effective maturities. The decay rates (the assumed rate at which the balance of existing accounts would decline) used on these accounts are based on assumptions developed from our actual experience with these accounts. If all of the Bank's checking, savings and money market accounts had been assumed to be subject to repricing within one year, interest-earning assets which were estimated to mature or reprice within one year would have exceeded interest-bearing liabilities with comparable characteristics by \$55.3 million, for a cumulative one-year gap of 0.60% of total assets.
- (5) Borrowings exclude \$19.1 million of deferred prepayment penalty costs and \$412 thousand of deferred gain on the terminated interest rate swap agreements.

The increase in the one-year gap to 18.79% at December 31, 2011 from 18.60% at September 30, 2011 was due primarily to a decrease in the amount of borrowings expected to reprice during the next 12 months and to a reduction in the amount of callable agency debentures expected to be called during the next 12 months. The amount of borrowings expected to reprice in the next 12 months is lower at December 31, 2011 than at September 30, 2011 due to \$250.0 million of borrowings that were renewed into longer term borrowings during the current quarter. Expected cash flows in the next 12 months related to agency debenture securities were lower at December 31, 2011 than at September 30, 2011 due to cash flows from calls during the current quarter being reinvested into securities that are not expected to reprice during the next 12 months.

Item 4. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

Our management, with the participation of our Chief Executive Officer and our Chief Financial Officer, evaluated the Company's disclosure controls and procedures (as defined in Rule 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended, the "Act") as of December 31, 2011. Based upon this evaluation, our Chief Executive Officer and our Chief Financial Officer have concluded that as of December 31, 2011, such disclosure controls and procedures were effective to ensure that information required to be disclosed by the Company in the reports it files or submits under the Act is accumulated and communicated to the Company's management (including the Chief Executive Officer and Chief Financial Officer) to allow timely decisions regarding required disclosure, and is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms.

Changes in Internal Control Over Financial Reporting

There have been no changes in the Company's internal control over financial reporting (as defined in Rule 13a-15(f) and 15d-15(f) under the Act) identified in connection with the evaluation required by Rule 13a-15(d) of the Act that occurred during the Company's quarter ended December 31, 2011 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Part II - OTHER INFORMATION

Item 1. Legal Proceedings

We are not involved in any pending legal proceedings other than routine legal proceedings occurring in the ordinary course of business. We believe that these routine legal proceedings, in the aggregate, are immaterial to our financial condition and results of operations.

Item 1A. Risk Factors

There have been no material changes to our risk factors disclosed in our Annual Report on Form 10-K for the fiscal year ended September 30, 2011. For a summary of risk factors relevant to our operations, see Part I, Item 1A in our 2011 Annual Report on Form 10-K.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

See "Liquidity and Capital Resources - Capital" in "Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations" regarding the OCC restrictions on dividends from the Bank to the Company.

On December 21, 2011, the Company announced that the Board of Directors approved the repurchase of up to \$193.0 million of the Company's common stock. There were no stock repurchases during the three months ended December 31, 2011. This plan has no expiration date.
