NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Organization and Summary of Significant Accounting Policies:

Organization and Principles of Consolidation

We are an independent oil and gas company engaged in the exploration, development and acquisition of crude oil and natural gas properties. Our company was founded in 1989 and initially focused on the shallow waters of the Gulf of Mexico. Today, we have a diversified asset base. Our domestic areas of operation include the onshore Gulf Coast, the Anadarko and Arkoma Basins of the Mid-Continent, the Uinta Basin of the Rocky Mountains and the Gulf of Mexico. Internationally, we are active offshore Malaysia and China and in the U.K. North Sea.

Our financial statements include the accounts of Newfield Exploration Company, a Delaware corporation, and its subsidiaries. We proportionately consolidate our interests in oil and gas exploration and production ventures and partnerships in accordance with industry practice. All significant intercompany balances and transactions have been eliminated. Unless otherwise specified or the context otherwise requires, all references in these notes to “Newfield,” “we,” “us” or “our” are to Newfield Exploration Company and its subsidiaries.

These unaudited consolidated financial statements reflect, in the opinion of our management, all adjustments, consisting only of normal and recurring adjustments, necessary to state fairly our financial position as of, and results of operations for, the periods presented. These financial statements have been prepared in accordance with the instructions to Form 10-Q and, therefore, do not include all disclosures required for financial statements prepared in conformity with accounting principles generally accepted in the United States of America. Interim period results are not necessarily indicative of results of operations or cash flows for a full year.

These financial statements and notes should be read in conjunction with our audited consolidated financial statements and the notes thereto included in our annual report on Form 10-K for the year ended December 31, 2005.

Common Stock Split

Following the close of trading on May 25, 2005, we completed a two-for-one split of our common stock. The split was effected by a common stock dividend. The stated par value per share of our common stock was not changed from $0.01. The financial statements and notes as of and for the quarter ended March 31, 2005 have been restated to retroactively reflect the stock split.

Dependence on Oil and Gas Prices

As an independent oil and gas producer, our revenue, profitability and future rate of growth are substantially dependent on prevailing prices for natural gas and oil. Historically, the energy markets have been very volatile and it is likely that oil and gas prices will continue to be subject to wide fluctuations in the future. A substantial or extended decline in oil or gas prices could have a material adverse effect on our financial position, results of operations, cash flows and access to capital and on the quantities of oil and gas reserves that we can economically produce.

Use of Estimates

The preparation of our consolidated financial statements in accordance with accounting principles generally accepted in the United States of America requires our management to make estimates and assumptions that affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities at the date of the financial statements, the reported amounts of revenues and expenses during the reporting period and the reported amounts of proved oil and gas reserves. Actual results could differ from these estimates. Our most significant financial estimates are related to our proved oil and gas reserves.

Reclassifications

Certain reclassifications have been made to prior years' reported amounts in order to conform with the current year presentation. These reclassifications did not impact our net income, stockholders' equity or cash flows.

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Insurance Recoveries

During the first quarter of 2006, we recognized a $30 million benefit related to our business interruption insurance coverage as a result of Hurricanes Katrina and Rita.

Inventories

Inventories consist primarily of tubular goods and well equipment held for use in our oil and gas operations and oil produced but not sold. Inventories are carried at the lower of cost or market. Crude oil from our operations offshore Malaysia is produced into a floating production, storage and off-loading vessel and sold periodically as a barge quantity is accumulated. The product inventory consisted of approximately 172,000 barrels of crude oil valued at $4 million at March 31, 2006 and 36,000 barrels of crude oil valued at $1 million at December 31, 2005. Cost for purposes of the carrying value of oil inventory is a sum of production costs and depreciation, depletion and amortization expense.

Foreign Currency

The British pound is the functional currency for our operations in the United Kingdom. Translation adjustments resulting from translating our United Kingdom subsidiaries' British pound financial statements into U.S. dollars are included as accumulated other comprehensive income on our consolidated balance sheet and statement of stockholders' equity. The functional currency for all other foreign operations is the U.S. dollar. Gains and losses incurred on currency transactions in other than a country's functional currency are recorded under the caption "Other" on our consolidated statement of income.

Accounting for Asset Retirement Obligations

If a reasonable estimate of the fair value of an obligation to perform site reclamation, dismantle facilities or plug and abandon wells can be made, we record a liability (an "asset retirement obligation" or "ARO") on our consolidated balance sheet and capitalize the asset retirement cost in oil and gas properties in the period in which the retirement obligation is incurred. In general, the amount of an ARO and the costs capitalized will be equal to the estimated future cost to satisfy the abandonment obligation using current prices that are escalated by an assumed inflation factor up to the estimated settlement date, which is then discounted back to the date that the abandonment obligation was incurred using an assumed cost of funds for our company. After recording these amounts, the ARO is accreted to its future estimated value using the same assumed cost of funds and the additional capitalized costs are depreciated on a unit-of-production basis within the related full-cost pool. Both the accretion and the depreciation are included in depreciation, depletion and amortization on our consolidated statement of income.

The change in our ARO for the three months ended March 31, 2006 is set forth below (in millions):

Balance as of January 1, 2006	$ 260
Accretion expense	4
Settlements	(3)
	261

Balance as of March 31, 2006	
Less: Current portion	44
Noncurrent ARO	$ 217

6

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Stock-Based Compensation

On January 1, 2006, we adopted SFAS No. 123 (revised 2004), "Share-Based Payment," (SFAS No. 123 (R)) to account for stock-based employee compensation. Among other items, SFAS No. 123(R) eliminates the use of APB 25 and the intrinsic value method of accounting and requires companies to recognize the cost of employee services received in exchange for awards of equity instruments based on the grant date fair value of those awards in their financial statements. We elected to use the modified prospective method for adoption, which requires compensation expense to be recorded for all unvested stock options and other equity-based compensation beginning in the first quarter of adoption. For all unvested options outstanding as of January 1, 2006, the previously measured but unrecognized compensation expense, based on the fair value at the original grant date, will be recognized in our financial statements over the remaining vesting period. For equity-based compensation awards granted or modified subsequent to January 1, 2006, compensation expense, based on the fair value on the date of grant, will be recognized in our financial statements over the vesting period. We utilize the Black-Scholes option pricing model to measure the fair value of stock options and a lattice-based model for our performance based restricted shares. Prior to the adoption of SFAS No. 123(R), we followed the intrinsic value method in accordance with APB 25 to account for employee stock-based compensation. Prior period financial statements have not been restated.

It is our policy to use unissued shares of stock when stock options are exercised. At March 31, 2006, we had approximately 2.6 million additional shares available for issuance pursuant to our existing employee and director plans. Of the shares available at March 31, 2006, only 1.2 million could be granted as restricted shares. Grants of restricted stock under the 2004 Omnibus Stock Plan reduce the total number of shares available under that plan by two times the number of shares issued as restricted stock.

The modified prospective method requires us to estimate forfeitures in calculating the expense related to stock-based compensation as opposed to our prior policy of recognizing the forfeitures as they occurred. We recorded a cumulative effect gain of a change in accounting principle of $1 million as a result of the adoption of this standard. Because the amount was immaterial, we included it in general and administrative expense on our consolidated statement of income.

The modified prospective method precludes changes to the grant date fair value of equity awards granted before the required effective date of adoption of SFAS No. 123(R). Any unearned compensation recorded under APB 25 related to these awards should be eliminated against the appropriate equity accounts. As a result, upon adoption we eliminated $34 million of unearned compensation cost and reduced by a like amount additional paid-in capital on our consolidated balance sheet.

For the three months ended March 31, 2006, we recorded stock-based compensation of $7 million for all plans. Of that amount, $3 million has been included in general and administrative expense on our consolidated statement of income and $4 million has been capitalized. The impact to net income of adopting SFAS No. 123(R) for this period was $2 million, or $0.02 per basic and diluted share. SFAS No. 123(R) also requires tax benefits relating to excess stock-based compensation deductions to be prospectively presented in our statement of cash flows as financing cash inflows. Accordingly, for the quarter ended March 31, 2006, we reported $1 million of excess tax benefits from stock-based compensation as cash provided by financing activities on our statement of cash flows, which reduced cash flows provided by operating activities by the same amount.

As of March 31, 2006 there was approximately $77 million of total unrecognized compensation expense related to unvested share-based compensation plans. This compensation expense is expected to be recognized on a straight-line basis over the remaining vesting period, approximately 5 years.

Stock Options. We have granted stock options under several employee stock option and omnibus stock plans. Options generally expire ten years from the date of grant and become exercisable at the rate of 20% per year. The exercise price of options cannot be less than the fair market value per share of our common stock on the date of grant.

The fair value of the stock options granted prior to and remaining outstanding at January 1, 2006 was determined using the Black-Scholes option valuation method assuming: no dividends, a weighted average risk-free interest rate of 4.09%, expected life of 6.5 years and a weighted average volatility of 37.52%.

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following table provides information related to stock option activity for the three months ended March 31, 2006:

	Number of Shares Underlying Options (In millions)	Weighted Average Exercise Price Per Share	Weighted Average Grant Date Fair Value Per Share	Weighted Average Contractual Life in Years	Aggregate Intrinsic Value (In millions) (1)
Outstanding at December 31, 2005	6.5	$ 23.60	$ 10.64	7.4	$ 118
Granted					
Exercised	(0.1)	17.00	7.43		(2)
Forfeited	(0.1)	24.82	11.40		(1)
Outstanding at March 31, 2006	6.3	$ 23.71	$ 10.70	7.1	$ 115
Exercisable at March 31, 2006	2.6	$ 19.23	$ 8.62	5.8	$ 59

(1) The intrinsic value of a stock option is the amount by which the current market value of the underlying stock exceeds the exercise price of the option.

The aggregate intrinsic value of stock options exercised during the three month period ended March 31, 2005 was approximately $20 million.

Restricted Shares. At March 31, 2006, our employees held 0.5 million restricted shares of our common stock that vest equally over the service period of nine years, but vesting may be accelerated if certain targets are met. The vesting of these shares is dependant upon the employees continued service with the company.

At March 31, 2006, 1.6 million restricted shares of our common stock were outstanding that are subject to performance-based vesting criteria (substantially all of which are considered market-based restricted stock under SFAS No. 123(R)). During February 2006, certain employees received 974,000 restricted performance-based shares of our common stock. The number of these shares that ultimately vest is based upon established performance targets that will be assessed on March 1, 2009. The expense will be recognized ratably over the service period from February 2006 to March 2009. The grant date fair value of these shares was $23.20 per share for a total value of $23 million. Under the grants to our executive officers, they are permitted to retire on or after March 1, 2008 if certain other conditions are met, without forfeiting the shares granted. Substantially all of the remaining performance based shares may vest in whole or in part in 2008, 2009 and 2010. The percentage of the shares vesting, if any, in each respective year is subject to the achievement of certain targets as identified in the respective agreements.

Under our non-employee director restricted stock plan as in effect on March 31, 2006, immediately after each annual meeting of our stockholders, each of our non-employee directors then in office received a number of restricted shares determined by dividing $30,000 by the fair market value of one share of our common stock on the date of the annual meeting. In addition, new directors elected after an annual meeting received a number of restricted shares determined by dividing $30,000 by the fair market value of one share of our common stock on the date of their election. The forfeiture restrictions lapse on the day before the first annual meeting of stockholders following the date of issuance of the shares if the holder remains a director until that time. At March 31, 2006, 27,436 shares remained available for grants under the plan. In March 2006, our Board adopted the First Amendment to the plan and the amendment was submitted to our stockholders for approval at our May 4, 2006 annual meeting. The amendment would increase the value of the restricted stock grants from $30,000 to $75,000 and would increase the total number of shares of our common stock available for grant under the plan by 100,000 shares.

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Status of the restricted shares as of March 31, 2006 and the changes during the three months ended March 31, 2006 is presented below:

	Service Based	Performance/ Market Based	Total
	(In thousands, except per share data)		
Non-vested shares outstanding at December 31, 2005	549	801	1,350
Granted	23	974	997
Forfeited	(5)	(1)	(6)
Vested	(40)	(167)	(207)
Non-vested shares outstanding at March 31, 2006	527	1,607	2,134
Weighted average grant date fair value of shares granted during the period	$ 43.91	$ 23.20	$ 23.68
Total fair value of shares vesting during the period	$ 726	$ 2,772	$ 3,498

Employee Stock Purchase Plan. Pursuant to our employee stock purchase plan, for each six month period beginning on January 1 or July 1 during the term of the plan, each eligible employee has the opportunity to purchase our common stock for a purchase price equal to 85% of the lesser of the fair market value of our common stock on the first day of the period or the last day of the period. No employee may purchase common stock under the plan valued at more than $25,000 in any calendar year. Employees of our foreign subsidiaries are not eligible to participate.

During the three months ended March 31, 2006, 23,742 options to purchase shares of our common stock with a grant date weighted average fair value of $13.14 per share were outstanding. In accordance with APB 25 and related interpretations, we did not recognize any compensation expense with respect to the plan prior to the adoption of SFAS No. 123(R). The fair value of the options granted to purchase shares in the first quarter of 2006 was determined using the Black-Scholes option valuation method assuming: no dividends, a risk-free interest rate of 4.35%, expected life of 6 months and volatility of 37.6%. At March 31, 2006, 110,059 shares of our common stock were available for issuance pursuant to the plan.

UK Bonus Plan. We have a cash bonus plan for the employees of our UK North Sea operations. The value of the bonus is determined based on the value of the shares of our UK subsidiary as determined by our Board of Directors. This plan is accounted for as a liability plan under SFAS No. 123(R) and is not material to our financial statements.

Pro forma Disclosures. Prior to January 1, 2006, we accounted for our employee stock options using the intrinsic value method prescribed by APB 25. As required by SFAS No. 123(R), we have disclosed below the effect on net income and earnings per share that would have been recorded using the fair value based method for the three months ended March 31, 2005. The weighted average fair value of the options granted in the first three months of 2005 was determined using the Black-Scholes option valuation method assuming: no dividends, a weighted average risk-free interest rate of 3.71%, expected life of 6.5 years and weighted average volatility of 38.55%.

9

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

	Three Months Ended March 31, 2005 (In millions, except per share data)
Net income:	
As reported [(1)]	$ 60
Pro forma [(2)]	58
Basic earnings per common share —	
As reported	$ 0.48
Pro forma	0.46
Diluted earnings per common share —	
As reported	$ 0.47
Pro forma	0.46

---

(1) Includes stock-based compensation costs, net of related tax effects, of $1 million.

(2) Includes $3 million of stock-based compensation costs, net of related tax effects, that would have been included in the determination of net income had the fair value based method been applied.

2. Earnings Per Share:

Basic earnings per share (EPS) is calculated by dividing net income (the numerator) by the weighted average number of shares of common stock (other than unvested restricted stock) outstanding during the period (the denominator). Diluted earnings per share incorporates the dilutive impact of outstanding stock options (using the treasury stock method) and unvested restricted stock.

The following is the calculation of basic and diluted weighted average shares outstanding and EPS for the indicated periods:

	Three Months Ended March 31,	
	2006	2005
	(In millions, except per	

		share data)		
Income (numerator):				
Net income — basic	$	149	$	60
Net income — diluted	$	149	$	60
Weighted average shares (denominator):				
Weighted average shares — basic		126		124
Dilution effect of stock options and unvested restricted stock outstanding at end of period		2		3
Weighted average shares — diluted		128		127
Earnings per share:				
Basic	$	1.18	$	0.48
Diluted	$	1.17	$	0.47

There were no antidilutive shares for the three months ended March 31, 2006. The calculation of shares outstanding for diluted EPS for the three months ended March 31, 2005 does not include the effect of outstanding stock options to purchase 0.1 million shares because to do so would be antidilutive.

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

3. Oil and Gas Assets:

Oil and Gas Properties

Oil and gas properties consisted of the following at:

	March 31, 2006	December 31, 2005
	(In millions)	
Subject to amortization	$ 6,492	$ 6,141
Not subject to amortization:		
Exploration wells in progress	87	56
Development wells in progress	111	107
Capitalized interest	78	71
Fee mineral interests	23	23
Other capital costs:		
Incurred in 2006	17	—
Incurred in 2005	105	110
Incurred in 2004	408	413
Incurred in 2003 and prior	112	121
Total not subject to amortization	941	901
Gross oil and gas properties	7,433	7,042
Accumulated depreciation, depletion and amortization	(2,760)	(2,632)
Net oil and gas properties	$ 4,673	$ 4,410

We believe that substantially all of the properties associated with costs not currently subject to amortization will be evaluated within four years except the Monument Butte Field. Because of its size, evaluation of the Monument Butte Field in its entirety will take significantly longer than four years. At March 31, 2006 and December 31, 2005, $312 million and $316 million, respectively, of costs associated with the Monument Butte Field were not subject to amortization.

4. Debt:

As of the indicated dates, our long-term debt consisted of the following:

	March 31, 2006	December 31, 2005
	(In millions)	
Senior unsecured debt:		
Bank revolving credit facility:		
Prime rate based loans	$ —	$ —
LIBOR based loans	—	—
Total bank revolving credit facility	—	—

7.45% Senior Notes due 2007		125		125
Fair value of interest rate swaps (1)		(3)		(2)
7 5/8% Senior Notes due 2011		175		175
Fair value of interest rate swaps (1)		(3)		(2)
Total senior unsecured notes		294		296
Total senior unsecured debt		294		296
8 3/8% Senior Subordinated Notes due 2012		249		249
6 5/8% Senior Subordinated Notes due 2014		325		325
Total long-term debt	$	868	$	870

(1) We have hedged $50 million principal amount of our 7.45% Senior Notes due 2007 and $50 million principal amount of our 7 5/8% Senior Notes due 2011. The hedges provide for us to pay variable and receive fixed interest payments.

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

In April 2006, we closed the sale of $550 million aggregate principal amount of our 6 5/8% Senior Subordinated Notes due 2016. See Note 10, “Subsequent Events.”

Credit Arrangements

In December 2005, we entered into a revolving credit facility that matures in December 2010. The terms of the credit facility provide for initial loan commitments of $1 billion from a syndication of participating banks, led by JPMorgan Chase as the agent bank. The loan commitments under the credit facility may be increased to a maximum aggregate amount of $1.5 billion if the lenders increase their loan commitments or new financial institutions are added to the credit facility. Loans under the credit facility bear interest, at the option of the Company, based on (a) a rate per annum equal to the higher of the prime rate announced from time to time by JPMorgan Chase Bank or the weighted average of the rates on overnight federal funds transactions with members of the Federal Reserve System during the last preceding business day plus 50 basis points or (b) a base Eurodollar rate, substantially equal to the London Interbank Offered Rate (“LIBOR”), plus a margin that is based on a grid of our debt rating (100 basis points per annum at March 31, 2006). At March 31, 2006, we had no borrowings under the credit facility.

The credit facility has restrictive covenants that include the maintenance of a ratio of total debt to book capitalization not to exceed 0.6 to 1.0; maintenance of a ratio of total debt to earnings before gain or loss on the disposition of assets, interest expense, income taxes, depreciation, depletion and amortization expense, exploration and abandonment expense and other noncash charges and expenses to consolidated interest expense of at least 3.5 to 1.0; and as long as our debt rating is below investment grade, the maintenance of an annual ratio of the calculated net present value of our oil and gas properties to total debt of at least 1.75 to 1.00. At March 31, 2006, we were in compliance with all of our debt covenants.

As of March 31, 2006, we had $64 million of undrawn letters of credit under our credit facility. The letters of credit outstanding under the credit facility are subject to annual fees, based on a grid of our debt rating (87.5 basis points at March 31, 2006), plus an issuance fee of 12.5 basis points.

We also have a total of $110 million of borrowing capacity under money market lines of credit with various banks. At March 31, 2006, we had no borrowings under our money market lines.

5. Contingencies:

We have been named as a defendant in a number of lawsuits arising in the ordinary course of our business. While the outcome of these lawsuits cannot be predicted with certainty, we do not expect these matters will have a material adverse effect on our financial position, cash flows or results of operations.

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

6. Segment Information:

While we only have operations in the oil and gas exploration and production industry, we are organizationally structured along geographic operating segments. Our operating segments are the United States, the United Kingdom, Malaysia, China and Other International. The accounting policies of each of our operating segments are the same as those described in Note 1, "Organization and Summary of Significant Accounting Policies."

The following tables provide the geographic operating segment information required by SFAS No. 131, "Disclosures about Segments of an Enterprise and Related Information," as well as results of operations of oil and gas producing activities required by SFAS No. 69, "Disclosures about Oil and Gas Producing Activities," as of and for the three months ended March 31, 2006 and 2005. Income tax allocations have been determined based on statutory rates in the applicable geographic segment.

7. Commodity Derivative Instruments and Hedging Activities:

We utilize swap, floor, collar and three-way collar derivative contracts to hedge against the variability in cash flows associated with the forecasted sale of our future oil and gas production. While the use of these derivative instruments limits the downside risk of adverse price movements, their use also may limit future revenues from favorable price movements.

With respect to a swap contract, the counterparty is required to make a payment to us if the settlement price for any settlement period is less than the swap price for such contract, and we are required to make payment to the counterparty if the settlement price for any settlement period is greater than the swap price for such contract. For a floor contract, the counterparty is required to make a payment to us if the settlement price for any settlement period is below the floor price for such contract. We are not required to make any payment in connection with the settlement of a floor contract. For a collar contract, the counterparty is required to make a payment to us if the settlement price for any settlement period is below the floor price for such contract, we are required to make payment to the counterparty if the settlement price for any settlement period is above the ceiling price for such contract and neither party is required to make a payment to the other party if the settlement price for any settlement period is equal to or greater than the floor price and equal to or less than the ceiling price for such contract. A three-way collar contract consists of a standard collar contract plus a put sold by us with a price below the floor price of the collar. This additional put requires us to make a payment to the counterparty if the settlement price for any settlement period is below the put price. Combining the collar contract with the additional put results in us being entitled to a net payment equal to the difference between the floor price of the standard collar and the additional put price if the settlement price is equal to or less than the additional put price. If the settlement price is greater than the additional put price, the result is the same as it would have been with a standard collar contract only. This strategy enables us to increase the floor and the ceiling price of the collar beyond the range of a traditional no cost collar while defraying the associated cost with the sale of the additional put.

Substantially all of our oil and gas derivative contracts are settled based upon reported prices on the NYMEX. The estimated fair value of these contracts is based upon various factors, including closing exchange prices on the NYMEX, over-the-counter quotations, volatility and, in the case of collars and floors, the time value of options. The calculation of the fair value of collars and floors requires the use of an option-pricing model.

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Cash Flow Hedges

Prior to the fourth quarter of 2005, all derivatives that qualified for hedge accounting were designated on the date we entered into the contract as a hedge of the variability in cash flows associated with the forecasted sale of our future oil and gas production. All open contracts that were designated as cash flow hedges as of September 30, 2005 will continue to be accounted for under hedge accounting until the contract expires or is otherwise settled. After-tax changes in the fair value of a derivative that is highly effective and is designated and qualifies as a cash flow hedge, to the extent that the hedge is effective, are recorded under the caption “Accumulated other comprehensive income (loss) — Commodity derivatives” on our consolidated balance sheet until the sale of the hedged oil and gas production. Upon the sale of the hedged production, the net after-tax change in the fair value of the associated derivative recorded under the caption “Accumulated other comprehensive income (loss) — Commodity derivatives” is reversed and the gain or loss on the hedge, to the extent that it is effective, is reported in “Oil and gas revenues” on our consolidated statement of income. At March 31, 2006, we had a net $41 million after-tax loss recorded under the caption “Accumulated other comprehensive income (loss) — Commodity derivatives.” We expect hedged production associated with commodity derivatives accounting for a net loss of approximately $42 million to be sold within the next 12 months and hedged production associated with a remaining net gain of approximately $1 million to be sold thereafter. The actual gain or loss on these commodity derivatives could vary significantly as a result of changes in market conditions and other factors.

For those contracts designated as a cash flow hedge, we formally document all relationships between the derivative instruments and the hedged production, as well as our risk management objective and strategy for the particular derivative contracts. This process includes linking all derivatives that are designated as cash flow hedges to the specific forecasted sale of oil or gas at its physical location. We also formally assess (both at the derivative’s inception and on an ongoing basis) whether the derivatives being utilized have been highly effective at offsetting changes in the cash flows of hedged production and whether those derivatives may be expected to remain highly effective in future periods. If it is determined that a derivative has ceased to be highly effective as a hedge, we will discontinue hedge accounting prospectively. If hedge accounting is discontinued and the derivative remains outstanding, we will carry the derivative at its fair value on our consolidated balance sheet and recognize all subsequent changes in its fair value on our consolidated statement of income for the period in which the change occurs.

Other Derivative Contracts

Although our three-way collar contracts are effective as economic hedges of our commodity price exposure, they do not qualify for hedge accounting under SFAS No. 133. Beginning in the fourth quarter of 2005 we elected not to designate any additional swap, collar and floor contracts that were entered into subsequent to October 1, 2005 as accounting hedges under SFAS No. 133. Our three-way collar contracts as well as the other derivative contracts that are not designated as cash flow hedges are carried at their fair value on our consolidated balance sheet under the captions “Derivative assets” and “Derivative liabilities.” We recognize all unrealized and realized gains and losses related to these contracts on our consolidated statement of income under the caption “Commodity derivative income (expense).” We recognized realized losses on these contracts of $1 million and $2 million in the first quarter of 2006 and 2005, respectively.

Natural Gas

As of March 31, 2006, we had entered into derivative contracts that qualify as cash flow hedges with respect to our future natural gas production as follows:

Period and Type of Contract	**Volume in MMMBtus**	**NYMEX Contract Price Per MMBtu Floor Contracts Range**	**NYMEX Contract Price Per MMBtu Floor Contracts Weighted Average**	**Estimated Fair Value Asset (Liability) (In millions)**
April 2006 - June 2006				
Floor contracts	4,800	$7.35	$7.35	$ 2
July 2006 - September 2006				
Floor contracts	4,800	7.35	7.35	3
October 2006 - December 2006				
Floor contracts	1,600	7.35	7.35	1
				$ 6

NEWFIELD EXPLORATION COMPANY

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

8. Accrued Liabilities:

As of the indicated dates, our accrued liabilities consisted of the following:

	March 31, 2006	December 31, 2005
	(In millions)	
Revenue payable	$ 104	$ 117
Accrued capital costs	207	154
Accrued lease operating expense	32	33
Employee incentive expense	48	60
Accrued interest on notes	10	21
Taxes payable	23	26
Deferred acquisition payments	17	20
Other	16	23
Total accrued liabilities	$ 457	$ 454

9. Comprehensive Income:

For the periods indicated, our comprehensive income (loss) consisted of the following:

	Three Months Ended March 31,	
	2006	2005
	(In millions)	
Net income	$ 149	$ 60
Reclassification adjustments for settled hedging positions, net of tax of $9 in 2006	(16)	1
Changes in fair value of outstanding hedging positions, net of tax of ($8) and $51, respectively	15	(95)
Total comprehensive income (loss)	$ 148	$ (34)

10. Subsequent Events:

On April 3, 2006, we closed the sale of $550 million aggregate principal amount of our 6 5/8% Senior Subordinated notes due 2016. We intend to use the net proceeds from the offering to redeem our 8 3/8% Senior Subordinated Notes due 2012 ($250 million aggregate principal amount outstanding plus redemption premium of approximately $19 million) and for general corporate purposes, including to fund a portion of our 2006 capital program. We delivered notice to the holders of our 8 3/8% Senior Subordinated Notes due 2012 that such notes would be redeemed on May 3, 2006.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Overview

We are an independent oil and gas company engaged in the exploration, development and acquisition of crude oil and natural gas properties. Our domestic areas of operation include the onshore Gulf Coast, the Anadarko and Arkoma Basins of the Mid-Continent, the Uinta Basin of the Rocky Mountains and the Gulf of Mexico. Internationally, we are active offshore Malaysia and China and in the U.K. North Sea.

Our revenues, profitability and future growth depend substantially on prevailing prices for oil and gas and on our ability to find, develop and acquire oil and gas reserves that are economically recoverable. The preparation of our financial statements in conformity with generally accepted accounting principles requires us to make estimates and assumptions that affect our reported results of operations and the amount of our reported assets, liabilities and proved oil and gas reserves. We use the full cost method of accounting for our oil and gas activities.

Oil and Gas Prices. Prices for oil and gas fluctuate widely. Oil and gas prices affect:

- the amount of cash flow available for capital expenditures;
- our ability to borrow and raise additional capital;
- the quantity of oil and gas that we can economically produce; and
- the accounting for our oil and gas activities.

We generally hedge a substantial, but varying, portion of our anticipated future oil and gas production to reduce our exposure to commodity price fluctuations.

Reserve Replacement. Most of our producing properties have declining production rates. As a result, to maintain and grow our production and cash flow we must locate and develop or acquire new oil and gas reserves to replace those being depleted by production. Substantial capital expenditures are required to find, develop and acquire oil and gas reserves.

Significant Estimates. We believe the most difficult, subjective or complex judgments and estimates we must make in connection with the preparation of our financial statements are:

- the quantity of our proved oil and gas reserves;
- the timing of future drilling, development and abandonment activities;
- the cost of these activities in the future;
- the fair value of the assets and liabilities of acquired companies;
- the value of our derivative positions; and
- the fair value of stock-based compensation.

Other factors. Please see "*Risk Factors*" in Item 1A of our annual report on Form 10-K for the year ended December 31, 2005 for a more detailed discussion of a number of other factors that affect our business, financial condition and results of operations. This report should be read together with those discussions.

Results of Operations

In 2005, four storms caused production deferrals in the Gulf of Mexico. The damage caused by these storms to infrastructure, pipelines and processing facilities continues to impact our Gulf of Mexico production. Our current deliverability from our Gulf of Mexico properties is about 250 MMcfe per day. We expect our Gulf production to reach about 270 MMcfe per day by the end of the second quarter of 2006.

Revenues. All of our revenues are derived from the sale of our oil and gas production, which is net of the effects of the settlement of qualifying hedging contracts associated with our production. Settlement of our derivative contracts that do not qualify for hedge accounting has no effect on our reported revenues. Our revenues may vary significantly from period to period as a result of changes in commodity prices or production volumes. Revenues for the first quarter of 2006 were 4% higher than the comparable period of 2005 due to higher commodity prices, offset by continued production deferrals related to the 2005 hurricanes and the timing of liftings in Malaysia.

	Three Months Ended March 31, 2006	2005	Percentage Increase (Decrease)
Production [1]:			
United States:			
Natural gas (Bcf)	44.4	51.2	(13%)
Oil and condensate (MBbls)	1,473	2,040	(28%)
Total (Bcfe)	53.2	63.4	(16%)
International:			
Natural gas (Bcf)	—	—	—
Oil and condensate (MBbls)	115	231	(50%)
Total (Bcfe)	0.7	1.5	(53%)
Total:			
Natural gas (Bcf)	44.4	51.2	(13%)
Oil and condensate (MBbls)	1,588	2,271	(30%)
Total (Bcfe)	53.9	64.9	(17%)
Average Realized Prices [2]:			
United States:			
Natural gas (per Mcf)	$ 7.79	$ 6.23	25%
Oil and condensate (per Bbl)	51.17	40.90	25%
Natural gas equivalent (per Mcfe)	7.92	6.34	25%
International:			
Natural gas (per Mcf)	$ —	$ 5.01	N/M[3]
Oil and condensate (per Bbl)	65.79	43.87	50%
Natural gas equivalent (per Mcfe)	10.97	7.19	53%
Total:			
Natural gas (per Mcf)	$ 7.79	$ 6.22	25%
Oil and condensate (per Bbl)	52.23	41.20	27%
Natural gas equivalent (per Mcfe)	7.96	6.36	25%

(1) Represent volumes sold regardless of when produced.

(2)

Average realized prices include the effects of hedging other than contracts that do not qualify for hedge accounting. Had we included the effect of these contracts, our average realized price for total gas would have been $7.83 per Mcf for the first quarter of 2006. There were no gas contracts that did not qualify for hedge accounting that settled in the first quarter of 2005. Our total oil and condensate average realized price would have been $50.55 per Bbl and $40.20 per Bbl for the first quarter of 2006 and 2005, respectively.

(3) Not meaningful.

Production. Our total oil and gas production (stated on a natural gas equivalent basis) for the first quarter of 2006 decreased 17% over the comparable period of 2005. The first quarter of 2006 decrease was primarily the result of continued Gulf of Mexico production deferrals related to the 2005 hurricanes of approximately 8 Bcfe, natural field declines and timing of liftings in Malaysia. The decrease was partially offset by successful drilling efforts in the Mid-Continent.

Natural Gas. Our first quarter 2006 natural gas production decreased 13% when compared to the same period of 2005. The decrease was primarily the result of continued Gulf of Mexico production deferrals.

Crude Oil and Condensate. Our first quarter 2006 oil and condensate production decreased 30% compared to the same period of 2005. The decrease was the result of production deferrals related to the 2005 hurricanes and timing of liftings in Malaysia.

Effects of Hedging on Realized Prices. The following table presents information about the effects of hedging on realized prices.

	Average Realized Prices		Ratio of Hedged to Non-Hedged Price[(2)]
	With Hedge[(1)]	Without Hedge	
Natural Gas:			
Three months ended March 31, 2006	$ 7.79	$ 7.64	102%
Three months ended March 31, 2005	6.22	6.06	103%
Crude Oil and Condensate:			
Three months ended March 31, 2006	$ 52.23	$ 58.76	89%
Three months ended March 31, 2005	41.20	47.17	87%

(1) Average realized prices include the effects of hedging other than contracts that do not qualify for hedge accounting. Had we included the effect of these contracts, our average realized price for total gas would have been $7.83 per Mcf for the first quarter of 2006. There were no gas contracts that did not qualify for hedge accounting that settled in the first quarter of 2005. Our total oil and condensate average realized price would have been $50.55 per Bbl and $40.20 per Bbl for the first quarter of 2006 and 2005, respectively.

(2) The ratio is determined by dividing the realized price (which includes the effects of hedging other than those contracts that do not qualify for hedge accounting) by the price that otherwise would have been realized without hedging activities.

Operating Expenses. Generally, our proved reserves and production have grown steadily since our founding. As a result, our operating expenses have also increased. We believe the most informative way to analyze changes in operating expenses from period to period is on a unit-of-production, or per Mcfe, basis.

The following table presents information about our operating expenses for the first quarter of 2006 and 2005.

	Unit-of-Production (Per Mcfe) Three Months Ended March 31,		Percentage Increase (Decrease)	Amount (In millions) Three Months Ended March 31,		Percentage Increase (Decrease)
	2006	2005		2006	2005	
United States:						
Lease operating	$ 0.95	$ 0.68	40%	$ 50	$ 43	17%
Production and other taxes	0.28	0.17	65%	15	11	42%
Depreciation, depletion and amortization	2.44	2.11	16%	130	134	(3%)
General and administrative	0.51	0.35	46%	27	22	23%
Business interruption insurance benefit	(0.56)	—	100%	(30)	—	100%
Total operating expenses	$ 3.62	$ 3.31	9%	$ 192	$ 210	(8%)

International:									
Lease operating	$	2.67	$	1.61	66%	$	2	$	3	(22%)
Production and other taxes		1.19		0.40	198%		1		—	40%
Depreciation, depletion and amortization		1.73		1.29	34%		1		2	(37%)
General and administrative		3.19		0.42	660%		3		1	262%
Total operating expenses	$	8.78	$	3.72	136%	$	7	$	6	11%
Total:										
Lease operating	$	0.97	$	0.70	39%	$	52	$	46	15%
Production and other taxes		0.29		0.17	71%		16		11	41%
Depreciation, depletion and amortization		2.43		2.09	16%		131		136	(3%)
General and administrative		0.55		0.35	57%		30		23	29%

Total operating expenses	$	3.68	$	3.31	11%	$	199	$	216	(8%)

Domestic Operations. Our domestic operating expenses for the first quarter of 2006, stated on an Mcfe basis, increased 9% over the same period of 2005. This increase was primarily related to the following items:

· Lease operating expense (LOE), on an Mcfe basis, was adversely impacted by continued deferred production related to the 2005 hurricanes of approximately 8 Bcfe, higher operating costs and increased well workover activity.

· Production and other taxes, on an Mcfe basis, increased due to higher commodity prices and an increase in the proportion of our production volumes subject to production taxes.

· The increase in our depreciation, depletion and amortization (DD&A) rate resulted from higher cost reserve additions. The component of DD&A associated with accretion expense related to SFAS No. 143 was $0.07 per Mcfe for the first quarter of 2006 and $0.05 per Mcfe for the first quarter of 2005. The component of DD&A associated with furniture, fixture and equipment was $0.02 per Mcfe for the first quarter of 2006 and 2005.

· The increase in general and administrative (G&A) expense of $0.16 per Mcfe, or 46%, was primarily due to growth in our workforce and an increase in incentive compensation as a result of higher adjusted net income (as defined in our incentive compensation plan) in the first quarter of 2006 as compared to the prior year. Adjusted net income for purposes of our incentive compensation plan excludes unrealized gains and losses on commodity derivatives. In addition, stock compensation expense increased approximately 123% due to the adoption of SFAS No. 123(R). See Note 1, "Organization and Summary of Significant Accounting Policies—*Stock-Based Compensation.*" During the first quarter of 2006, we capitalized $10 million of direct internal costs compared to $9 million in the first quarter of 2005.

· In the first quarter of 2006, we recorded a $30 million benefit related to our business interruption insurance coverage as a result of the operations disruptions caused by the 2005 hurricanes.

International Operations. Our international operating expenses for the first quarter of 2006, stated on an Mcfe basis, increased 136%. This increase resulted from the 53% decrease in production for the first quarter of 2006 due to the timing of liftings in Malaysia. Aggregate costs remained flat period over period.

Interest Expense. The following table presents information about our interest expense for the first quarter of 2006 compared to the same period of the prior year.

	Three Months Ended March 31,	
	2006	**2005**
	(In millions)	
Gross interest expense	$ 18	$ 18
Capitalized interest	(12)	(12)
Total interest expense	$ 6	$ 6

Commodity Derivative Income (Expense). The following table presents information about the components of commodity derivative income (expense) for the first quarter of 2006 compared to the same period of the prior year.

Three Months Ended March 31,

	2006	2005
	(In millions)	
Cash flow hedges:		
Hedge ineffectiveness	$ 5	$ (9)
Derivatives not designated as cash flow hedges:		
Unrealized gain (loss) due to changes in fair market value	2	(98)
Realized (loss) on settlement	(1)	(2)
Total commodity derivative income (expense)	$ 6	$ (109)

Hedge ineffectiveness is associated with our hedging contracts that qualify for hedge accounting under SFAS No. 133. The unrealized gain (loss) due to changes in fair market value is associated with our derivative contracts that do not qualify for hedge accounting and represents changes in the fair value of our open contracts during the period.

Taxes. The effective tax rates for the first quarter of 2006 and 2005 were 36.1% and 27.2%, respectively. The effective tax rate for the first quarter of 2005 was less than the federal statutory tax rate because the valuation allowance on our U.K. net operating loss carryforwards was reduced by $8 million because of a substantial increase in estimated future taxable income as a result of our Grove discovery in the U.K. North Sea. Estimates of future taxable income can be significantly affected by changes in oil and natural gas prices, the timing and amount of future production and future operating expenses and capital costs.

Liquidity and Capital Resources

We must find new and develop existing reserves to maintain and grow production and cash flow. We add new reserves and grow production through successful exploration and development drilling and the acquisition of properties. These activities require substantial capital expenditures. Historically, we have successfully grown our reserve base and production, resulting in net long-term growth in our cash flow from operating activities. Fluctuations in commodity prices have been the primary reason for short-term changes in our cash flow from operating activities.

We establish a capital budget at the beginning of each calendar year based on expected cash flow from operations for that year. In the past, we often have increased our capital budget during the year as a result of acquisitions or successful drilling. Because of the nature of the properties we own, a substantial majority of our capital budget is discretionary. Our 2006 capital budget exceeds currently expected cash flow from operations by approximately $300 million. To the extent that cash flow from operations during the year is lower than our capital needs, we will make up the shortfall with borrowings under our credit arrangements and with a portion of the proceeds from our $550 million Senior Subordinated Notes offering (see — *Cash Flows from Financing Activities* below).

Credit Arrangements. In December 2005, we entered into a revolving credit facility that matures in December 2010. The terms of the credit facility provide for initial loan commitments of $1 billion from a syndication of participating banks, led by JPMorgan Chase as the agent bank. The loan commitments under the credit facility may be increased to a maximum aggregate amount of $1.5 billion if the lenders increase their loan commitments or new financial institutions are added to the credit facility. Loans under the credit facility bear interest, at the option of the Company, based on (a) a rate per annum equal to the higher of the prime rate announced from time to time by JPMorgan Chase Bank or the weighted average of the rates on overnight federal funds transactions with members of the Federal Reserve System during the last preceding business day plus 50 basis points or (b) a base Eurodollar rate, substantially equal to the London Interbank Offered Rate ("LIBOR"), plus a margin that is based on a grid of our debt rating (100 basis points per annum at March 31, 2006). At April 27, 2006, we had no outstanding borrowings under the credit facility.

The credit facility has restrictive covenants that include the maintenance of a ratio of total debt to book capitalization not to exceed 0.6 to 1.0; maintenance of a ratio of total debt to earnings before gain or loss on the disposition of assets, interest expense, income taxes, depreciation, depletion and amortization expense, exploration and abandonment expense and other noncash charges and expenses to consolidated interest expense of at least 3.5 to 1.0; and as long as our debt rating is below investment grade, the maintenance of an annual ratio of the calculated net present value of our oil and gas properties to total debt of at least 1.75 to 1.00. At March 31, 2006, we were in compliance with all of its debt covenants.

As of April 27, 2006, we had $64 million of undrawn letters of credit under our credit facility. The letters of credit outstanding under the credit facility are subject to annual fees, based on a grid of our debt rating (87.5 basis points at

April 27, 2006) plus an issuance fee of 12.5 basis points.

We also have a total of $110 million of borrowing capacity under money market lines of credit with various banks. At April 27, 2006, we had no outstanding borrowings under our money market lines.

Based upon the covenants to the credit facility, as of April 27, 2006 we have approximately $500 million of available borrowing capacity under the revolving credit facility, which includes the available capacity under our money market lines of credit. Following the redemption of our 8 3/8% Senior Subordinated Notes due 2012, we will have approximately $750 million of available borrowing capacity under the revolving credit facility.

Working Capital. Our working capital balance fluctuates as a result of the timing and amount of borrowings or repayments under our credit arrangements. Generally, we use excess cash to pay down borrowings under our credit arrangements. As a result, we often have a working capital deficit or a relatively small amount of positive working capital. We had a working capital deficit of $151 million as of March 31, 2006. This compares to a working capital deficit of $130 million as of December 31, 2005. Our working capital deficit is affected by fluctuations in the fair value of our commodity derivative instruments. As of March 31, 2006, we had a net short-term derivative liability of $32 million compared to a net short-term derivative liability of $89 million at December 31, 2005.

Cash Flows from Operations. Cash flows from operations is primarily affected by production and commodity prices, net of the effects of settlements of our derivative contracts. Our cash flows from operations are also impacted by changes in working capital. We sell substantially all of our natural gas and oil production under floating market contracts. However, we enter into commodity hedging arrangements to reduce our exposure to fluctuations in natural gas and oil prices and to achieve more predictable cash flow. See “Oil and Gas Hedging” below. We typically receive the cash associated with accrued oil and gas sales within 45-60 days of production. As a result, cash flows from operations and income from operations generally correlate, but cash flows from operations is impacted by changes in working capital and is not affected by DD&A, writedowns or other non cash charges.

Our net cash flow from operations was $340 million for the three months ended March 31, 2006, a 30% increase over the same period of the prior year. The increase was due to a 25% increase in our realized oil and gas prices (on a natural gas equivalent basis) and a decrease in working capital requirements during the first quarter of 2006.

Although our second quarter 2006 production volumes will be impacted by continued production deferrals related to the 2005 hurricanes, we expect that higher commodity prices will offset the cash flow impact of this deferred production. In addition, second quarter 2006 cash flow from operations will be impacted by the redemption premium of approximately $19 million related to our 8 3/8% Senior Subordinated Notes due 2012, which will be redeemed on May 3, 2006 (see — *Cash Flows from Financing Activities* below).

Capital Expenditures. Our first quarter 2006 capital spending was $390 million, an increase of 56% from our $250 million in capital spending during the same period of 2005. This excludes asset retirement obligations, which were insignificant during the first quarter of 2006 and totaled $4 million during the same period of 2005. We invested $223 million in domestic development, $97 million in domestic exploration, $8 million in other domestic leasehold activity and $62 million internationally.

Our current budget for capital spending in 2006 is $1.9 billion, excluding acquisitions. The total includes $1.6 billion for capital projects, $180 million for hurricane repairs in the Gulf of Mexico (substantially all of which will be offset with proceeds from insurance) and $105 million for capitalized interest and overhead. Approximately 23% of the $1.6 billion of capital projects is allocated to the Gulf of Mexico (including the traditional shelf, the deep and ultra-deep shelf and deepwater), 22% to the onshore Gulf Coast, 27% to the Mid-Continent, 9% to the Rocky Mountains and 19% to international projects. Actual levels of capital expenditures may vary significantly due to many factors, including the extent to which proved properties are acquired, drilling results, oil and gas prices, industry conditions and the prices and availability of goods and services. We continue to pursue attractive acquisition opportunities; however, the timing, size and purchase price of acquisitions are unpredictable. Historically, we have completed several acquisitions of varying sizes each year. Depending on the timing of an acquisition, we may spend additional capital during the year of the acquisition for drilling and development activities on the acquired properties.

Cash Flows from Financing Activities. Net cash flow used in financing activities for the three months ended March 31, 2005 was $42 million. During that period, we repaid a net $57 million under our credit arrangements and received proceeds of $15 million from the issuance of shares of our common stock.

On April 3, 2006, we closed the sale of $550 million aggregate principal amount of our 6 5/8% Senior Subordinated Notes due 2016. We intend to use the proceeds from the offering to redeem our 8 3/8% Senior Subordinated Notes due 2012 and for general corporate purposes, including the funding of a portion of our 2006 capital budget (discussed above).

Oil and Gas Hedging

We generally hedge a substantial, but varying, portion of our anticipated future oil and natural gas production for the next 12-24 months as part of our risk management program. In the case of acquisitions, we may hedge acquired production for a longer period. We use hedging to reduce price volatility, help ensure that we have adequate cash flow to fund our capital programs and manage price risks and returns on some of our acquisitions and drilling programs. Our decision on the quantity and price at which we choose to hedge our production is based in part on our view of current and future market conditions.

While the use of these hedging arrangements limits the downside risk of adverse price movements, they may also limit future revenues from favorable price movements. In addition, the use of hedging transactions may involve basis risk. Substantially all of our hedging transactions are settled based upon reported settlement prices on the NYMEX. We believe there is no material basis risk with respect to our natural gas and crude oil price hedging contracts because substantially all of our hedged natural gas and crude oil production is sold at market prices that historically have had a high positive correlation to the settlement price. The price that we receive for natural gas production from the Gulf of Mexico and onshore Gulf Coast, after basis differentials, transportation and handling charges, typically averages $0.40 - $0.60 less per MMBtu than the NYMEX. Realized gas prices for our Mid-Continent properties, after basis differentials, transportation and handling charges, typically average $0.70 - $0.80 less per MMBtu than the NYMEX. The price we receive for our Gulf Coast oil production typically averages about $2 per barrel below the NYMEX West Texas Intermediate (WTI) price. The price we receive for our oil production in the Rocky Mountains is now averaging about $9 per barrel below the WTI price. Oil production from the Mid-Continent typically sells at a $1.00 - $1.50 per barrel discount to WTI. Oil production from Malaysia typically sells at Tapis, or about even with WTI.

Please see the discussion and tables in Note 7, "Commodity Derivative Instruments and Hedging Activities," to our consolidated financial statements appearing earlier in this report for a description of the accounting applicable to the derivative contracts utilized in our hedging program and a listing and fair value of those open contracts as of March 31, 2006.

Between March 31, 2006 and April 25, 2006, we entered into other contracts with respect to our future natural gas production as set forth in the table below. These contracts do not qualify for hedge accounting.

		NYMEX Contract Price Per MMBtu				
			Collars			
		Swaps	Floors		Ceilings	
Period and Type of Contract	**Volume in MMMBtus**	**(Weighted Average)**	**Range**	**Weighted Average**	**Range**	**Weighted Average**

General Information

General information about us can be found at www.newfield.com. In conjunction with our web page, we also maintain an electronic publication entitled @NFX. @NFX is periodically published to provide updates on our operating activities and our latest publicly announced estimates of expected production volumes, costs and expenses for the then current quarter. Recent editions of @NFX are available on our web page. To receive @NFX directly by email, please forward your email address to info@newfld.com or visit our web page and sign up. Unless specifically incorporated, the information about us at www.newfield.com or in any edition of @NFX is not part of this report.

Our annual report on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K, as well as any amendments and exhibits to those reports, are available free of charge through our website as soon as reasonably practicable after we file or furnish them to the Securities and Exchange Commission.

Forward-Looking Information

This report contains information that is forward-looking or relates to anticipated future events or results such as planned capital expenditures, the availability of capital resources to fund capital expenditures, production targets, anticipated production rates, our financing plans and our business strategy and other plans and objectives for future operations. Although we believe that the expectations reflected in this information are reasonable, this information is based upon assumptions and anticipated results that are subject to numerous uncertainties. Actual results may vary significantly from those anticipated due to many factors, including:

- drilling results;
- oil and gas prices;
- well and waterflood performance;
- severe weather conditions (such as hurricanes);
- the prices of goods and services;
- the availability of drilling rigs and other support services; and
- the availability of capital resources.

All written and oral forward-looking statements attributable to us or persons acting on our behalf are expressly qualified in their entirety by such factors.

Commonly Used Oil and Gas Terms

Below are explanations of some commonly used terms in the oil and gas business.

Basis risk. The risk associated with the sales point price for oil or gas production varying from the reference (or settlement) price for a particular hedging transaction.

Bbl. One stock tank barrel, or 42 U.S. gallons liquid volume, used herein in reference to crude oil or condensate.

Bcf. Billion cubic feet.

Bcfe. Billion cubic feet equivalent, determined using the ratio of six Mcf gas to one Bbl of crude oil or condensate.

Btu. British thermal unit, which is the heat required to raise the temperature of a one-pound mass of water from 58.5 to 59.5 degrees Fahrenheit.

MBbls. One thousand barrels of crude oil or other liquid hydrocarbons.

Mcf. One thousand cubic feet.

Mcfe. One thousand cubic feet equivalent, determined using the ratio of six Mcf of natural gas to one Bbl of crude oil or condensate.

MMBbls. One million barrels of crude oil or other liquid hydrocarbons.

MMBtu. One million Btus.

MMMBtu. One billion Btus.

MMcf. One million cubic feet.

MMcfe. One million cubic feet equivalent, determined using the ratio of six Mcf of natural gas to one Bbl of crude oil or condensate.

NYMEX. The New York Mercantile Exchange.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

We are exposed to market risk from changes in oil and gas prices, interest rates and foreign currency exchange rates as discussed below.

Oil and Gas Prices

We generally hedge a substantial, but varying, portion of our anticipated oil and gas production for the next 12-24 months as part of our risk management program. In the case of acquisitions, we may hedge acquired production for a longer period. We use hedging to reduce price volatility, help ensure that we have adequate cash flow to fund our capital programs and manage price risks and returns on some of our acquisitions and drilling programs. Our decision on the quantity and price at which we choose to hedge our production is based in part on our view of current and future market conditions. While hedging limits the downside risk of adverse price movements, it may also limit future revenues from favorable price movements. For a further discussion of our hedging activities, see the information under the caption "Oil and Gas Hedging" in Item 2 of this report.

Please see the discussion and tables in Note 7, "Commodity Derivative Instruments and Hedging Activities," to our consolidated financial statements appearing earlier in this report for a description of the accounting applicable to the derivative contracts utilized in our hedging program and a listing and fair value of those open contracts as of March 31, 2006.

Interest Rates

At March 31, 2006, our long-term debt was comprised of:

	Fixed Rate Debt	Variable Rate Debt
	(In millions)	
Bank revolving credit facility	$	$
7.45% Senior Notes due 2007[1]	75	50
7 5/8% Senior Notes due 2011[1]	125	50
8 3/8% Senior Subordinated Notes due 2012	250	
6 5/8% Senior Subordinated Notes due 2014	325	
Total long-term debt	$ 775	$ 100

(1) As of March 31, 2006, $50 million principal amount of our 7.45% Senior Notes due 2007 and $50 million principal amount of our 7 5/8% Senior Notes due 2011 were subject to interest rate swaps. These swaps provide for us to pay variable and receive fixed interest payments, and are designated as fair value hedges of a portion of our outstanding senior notes.

We consider our interest rate exposure to be minimal because a substantial majority, about 89% of our long-term debt obligations, after taking into account our interest rate swap agreements, were at fixed rates.

Foreign Currency Exchange Rates

The British pound is the functional currency for our operations in the United Kingdom. The functional currency for all other foreign operations is the U.S. dollar. To the extent that business transactions in these countries are not denominated in the respective country's functional currency, we are exposed to foreign currency exchange risk. We consider our current risk exposure to exchange rate movements, based on net cash flows, to be immaterial. We did not have any open derivative contracts relating to foreign currencies at March 31, 2006.

Item 4. Controls and Procedures

Disclosure Controls and Procedures

As of the end of the period covered by this report, we carried out an evaluation, under the supervision and with the participation of our Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures (as defined in Rule 13a-15(e) of the Securities Exchange Act of 1934). Based upon that evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective as of March 31, 2006 in ensuring that material information was accumulated and communicated to management, and made known to our Chief Executive Officer and Chief Financial Officer, on a timely basis to allow disclosure as required in this report.

Changes in Internal Control Over Financial Reporting

As of the end of the period covered by this report, we carried out an evaluation, under the supervision and with the participation of our Chief Executive Officer and Chief Financial Officer, to determine whether any changes occurred during the first quarter of 2006 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting. Based on that evaluation, there were no changes in our internal control over financial reporting or in other factors that have materially affected or are reasonably likely to materially affect our internal control over financial reporting.

PART II

Item 1. Legal Proceedings

We have been named as a defendant in certain lawsuits in the ordinary course of business. While the outcome of these lawsuits cannot be predicted with certainty, we do not expect these matters to have a material adverse effect on our financial position, cash flows or results of operations.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

The following table sets forth certain information with respect to repurchases of our common stock during the three months ended March 31, 2006:

Period	Total Number of Shares Purchased[1]	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number (or Approximate Dollar Value) of Shares that May Yet Be Purchased Under The Plans or Programs
January 1 - January 31, 2006	—	—	—	—
February 1 - February 28, 2006	60,797	$51.21	—	—
March 1 - March 31, 2006	—	—	—	—

(1) All of the shares repurchased were surrendered by employees to pay tax withholding upon the vesting of restricted stock awards. These repurchases were not part of a publicly announced program to repurchase shares of our common stock, nor do we have a publicly announced program to repurchase shares of our common stock.

Item 6. Exhibits

(a) Exhibits:

Exhibit Number	Description
