FOR IMMEDIATE RELEASE

**CHICAGO AREA COMMUNITIES DEPLOY REGIONWIDE ALVARION
MOBILE BROADBAND NETWORK TO FIGHT CRIME, FIRE**

*BreezeACCESS® 900 Network Uses Only 14 Base Stations to Provide
Full Coverage Across Seven Cities*

Mountain View, California, May 17, 2006 - Alvarion, (NASDAQ: ALVR), the world's leading provider of wireless broadband solutions and specialized mobile networks, today announced that six Chicago area communities have deployed a regional mobile broadband network using its BreezeACCESS 900 system to support fixed and mobile public safety applications, specifically to help crime and fire fighting efforts. Using only fourteen base stations to cover the entire area, along with the associated mobile terminals installed in the public safety vehicles, the network was designed and deployed by Alvarion partner PCS Technologies in the Chicago area including the cities of Hodgkins, North Riverside, Riverside, Lyons, Countryside, McCook, and the Pleasantview Fire District.

"This deployment is an ideal prototype of suburban communities addressing their common public safety interests with a regional broadband network," commented John Feldman, vice president and general manager of PCS Technologies. "The BreezeACCESS 900 leverages Alvarion's deep understanding of the mobile public safety market going back to 2000 enabling coverage of the entire region for a fraction of the cost of comparable mesh solutions. Sharing infrastructure and access to some common servers and databases generates many economies for the communities, while giving each city the ability to tailor the specific information available to their public safety officials and access to unique servers city-by-city."

Connecting approximately 50 police cars and 15 fire vehicles, the network is used for dispatch functions, while enabling mobile access to central databases such as the Department of Motor Vehicle (DMV) records. Also providing remote access to several video surveillance cameras to monitor and protect public structures, such as the local water treatment plant and city government buildings, network deployment began last year and has grown incrementally to include additional local jurisdictions.

"Being adjacent to Chicago has its advantages, but it also means we need big city policing on a small city budget," noted Mark Wilkans, lieutenant of the Hodgkins Police Department and chair of the technical subcommittee of the Area-wide Law Enforcement Radio Terminal System (ALERTS) users group, a statewide body focused on officer use of mobile technologies. "The

total price of a new system is as important as its effectiveness and with Alvarion, the mobile broadband network has proven to be equally effective in crime fighting and cost. Adding the fact that the network crosses multiple cities and departments—including both fire and police—gives us a terrific advantage since all units responding to joint assistance emergencies have common access, even outside their home jurisdiction.”

A cost-effective alternative to a mesh network requiring less than one-tenth the infrastructure, BreezeACCESS 900 offers secure, robust and reliable mobile access covering both metro and rural areas and implements advanced features for high-performance seamless roaming, even at freeway speeds. With the ability to integrate Wi-Fi access into the vehicle-mounted subscriber unit, BreezeACCESS 900 permits departments to leverage the low cost and mass market availability of Wi-Fi enabled devices within a 300 foot zone around each vehicle. BreezeACCESS 900 also integrates seamlessly with other BreezeACCESS systems, including BreezeACCESS 4900, enabling carrier-class, FIPS 197 secure, licensed backhaul of BreezeACCESS 900 cells.

“With increasing demand for Homeland Security and other public safety applications, broadband at vehicular speeds, especially in non-line-of-sight conditions, is becoming a basic requirement for cities and so they are beginning to adopt it everywhere,” said Amir Rosenzweig, president of Alvarion, Inc. “Our BreezeACCESS 900 is key in addressing this market by delivering the needed capacity, coverage, performance and overall critical robustness at a fraction of the cost of other systems.”

Supporting both fixed and mobile subscribers, BreezeACCESS 900 is an effective, real-time communications system that provides complete coverage even in areas with many obstructions. Whether connecting emergency vehicles to the public safety network or residential users in dense foliage areas, BreezeACCESS 900 is the ideal solution due to its frequency customization and fast, programmable frequency hopping capabilities.

About Alvarion

With more than 2 million units deployed in 150 countries, Alvarion is the worldwide leader in wireless broadband, providing systems to carriers, ISPs and private network operators, and also in extending coverage of GSM and CDMA mobile networks to developing countries and other hard to serve areas.

Leading the WiMAX revolution, Alvarion has the most extensive deployments and proven product portfolio in the industry covering the full range of frequency bands with both fixed and mobile solutions. Alvarion’s products enable the delivery of business and residential broadband access, corporate VPNs, toll quality telephony, mobile base station feeding, hotspot coverage extension, community interconnection, public safety communications, and mobile voice and data. Alvarion works with several global OEM providers and more than 200 local partners to support its diverse global customer base in solving their last-mile challenges.

As a wireless broadband pioneer, Alvarion has been driving and delivering innovations for more than 10 years from core technology developments to creating and promoting industry standards. Leveraging its key roles in the IEEE and HiperMAN standards committees and experience in deploying OFDM-based systems, the Company's prominent work in the WiMAX Forum™ is focused on increasing the widespread adoption of standards-based products in the wireless broadband market and leading the entire industry to mobile WiMAX solutions.
