Dear Investor:

Recovery in Transition: Turning Credit into Jobs?

It is easy to be overwhelmed when sifting through the myriad data points and analyses of economic activity and business trends. Much of the information is providing a mixed picture which is unusual at this stage of a typical economic recovery. Even though the global economy has yet to recouple with the longer term growth trend, we believe that the world is still in a cyclical transition phase. Perhaps the single most important measure of economic prosperity and cyclical strength is job creation. However, it is unclear as to when many of the world's developed economies will return to a sustainable higher level of full time employment. For the U.S., this would not only move unemployment from 9% to under 7%, but significantly reduce the debilitating number of long-term unemployed workers which has spiked to historic levels. How quickly we can achieve this goal of adding close to 3 million jobs to the U.S. economy will relate to the interplay of fiscal, demographic and political forces which all play roles in determining the probable rate of growth. Our economy is also subject to the influence of similar forces in other countries, many of whom are also encumbered by difficult economic circumstances. A higher proportion of countries are currently affected by a broad spectrum of maladies than I can recall over the past two decades. Many are suffering from isolated natural disasters or circumstances, while others reflect economic or societal imbalances. Thus, the duration of their impact will vary greatly. This may lead to a range of both opportunities or risks over the coming years.

An Extended Period of Transition

Globally, this recovery is both weaker and slower than the norm. Europe's debt crisis and their decision to risk compounding the recession's after effects with the potentially premature introduction of austerity measures has yet to be fully felt. Theoretically, austerity now will pave the way for future prosperity, but when will this be realized? The impact on the global supply chain from Japan's tragic earthquake and tsunami, as well as other relatively less destructive yet, nonetheless, horrific natural disasters around the world have all combined to slow economic growth. On top of this, civil protests, revolution and regional political change have impacted local economies and capital markets. Hopefully, the potential for multiple countries initiating major rebuilding efforts over the next few years may stimulate future growth. On top of these factors, China is leading other emerging market countries through a period of fiscal tightening. Such restraint is in response to an inflation scare, which in part relates to the emergence of growing middle class consumption trends in these countries. At the same time, China plans to further boost domestic consumption and is dramatically expanding the scale of its low cost social housing programs. Meanwhile, the U.S. economy has been further impacted by state and local government's budget tightening and program cutting. The wind down of the Federal Reserve's QE2 and other stimulus programs, as well as a shift in domestic consumer mentality towards saving for a rainy day and continued debt reduction is also dampening demand. For a better perspective of where this places us at this time in the cycle, please refer to Chart 1, below, which shows that the U.S. economy has been improving, but at a much slower rate than other recessions.

Chart 1:

A Constrained Recovery in Consumption

Chart 2 shows the pattern of real consumer spending compared with historical trends. Higher food and fuel prices have clearly constrained the purchasing power of many Americans, as has tighter credit, and the trend toward saving. However, the impact of fewer jobs and reduced job security are doubtless contributors. With an estimated 70% of U.S. GDP based on consumption, it is not surprising that the pace of recovery has been so slow. Since our imports have exceeded exports for many years, the global impact of our reduced spending has compelled other countries to expand their domestic consumption.

Chart 2:

Dysfunctional Home Financing Remains a Problem

Edgar Filing: ALPINE GLOBAL DYNAMIC DIVIDEND FUND - Form N-CSRS

Historically, housing and automobile sales have been major drivers of prior economic recoveries due to the multiplier effect of creating jobs in many industries which would contribute to the final product. While the auto sector has improved we are buying cars at an annual rate at approximately 30% below the 2005 level. Meanwhile, permits to build new single family homes are almost 80% below peak levels of 2005 and almost 60% below the 50 year average volume!

Alpine View

April 30, 2011 (Unaudited)

Chart 3 illustrates the current trend of residential investment versus the patterns of prior housing recoveries. Today, a high proportion of home purchases are for cash, reflecting both the role of investors as well as the inability of banks to adjust their lending standards and clean up their poor performing loan portfolios.

Chart 3:

The creation of excessive capital beginning with Y2K fears, followed by efforts to offset potential negative wealth effects from the tech stock bubble bursting in 2001, combined with the poor regulatory and business decisions made over the last decade regarding the mortgage policies and the foreclosure process has led to devastating problems for many Americans. While the U.S. housing market remains under pressure almost six years past its peak, we do not believe that the current pattern of events reflects a structural shift in housing patterns, although we do think it will take at least another year of below trend housing growth before we see the light of recovery. Fundamental to creating a sustainable rebound will be a resurgence of strong job creation. The same will be true for other countries, including Ireland, Spain, and much of Eastern Europe and the Persian Gulf where capital for real estate exceeded growth in both income and populations. This is in sharp contrast with emerging markets which continue to grow in terms of their relative economic output, relative per capita incomes and, thus, relative level of prosperity.

Financial Markets and Politics in Transition

Alpine's top down/bottom up investment approach takes into account not only macro economic fundamentals and demographic drivers of demand, but also societal themes and political trends which could influence both market psychology and fiscal policy, as well as business and consumer confidence. Sometimes these themes coalesce into a collective public will, as manifested through shifts in political power or even transformation of the political process itself. Clearly such a transition is continuing to play out in countries of North Africa and the Middle East. Over the next 18 months, politics will be a major factor for a number of countries and markets with elections in Thailand, Turkey, Egypt, Japan, France, Germany, Russia and the U.S. Even China will reconstitute its ruling council next year. By their nature, politicians will promise changes or highlight concerns, which could impact markets. We are already seeing a domestic political theater play out in Congress, disguised

as an ideological debate over budget deficits and the country's debt ceiling, as a prelude to 2012 elections.

In light of these challenges, it is important to have perspective on the strong performance of global stocks since the Great Recession of 2008. Capital markets have transitioned towards recovery in advance of the economy, reflecting the return of significant liquidity to both debt and equity markets. However, there has been a bias towards both large and publicly traded companies at the expense of small businesses and private companies. Thus, the slower pace of overall economic recovery is not reflected in the stronger relative performance of larger publicly traded companies which have access to capital and in many cases are still sitting on cash.

Given the depth and breadth of the financial frailties revealed in 2008, most central banks and treasuries chose to shore up major banks, rather than close them down. Even though the U.S. banking sector has stabilized and its viability is no longer impaired, the prospects for rejuvenating a fully functional mortgage market and small business lending capacity is not yet visible. Abroad, French and German banks remain critically exposed to weak loans in the Greek, Irish and Portuguese economies and, thus, have to continue to build reserves, while government stewardship of banks in England, Belgium and Iceland will continue for a number of years. For much of the emerging world, the banks are being required to raise their level of reserves in order to slow their pace of loan growth. Since these banks had little exposure to the bad loans leading up to 2008, this action should be viewed as fundamentally positive for strengthening long term lending capacity. Clearly, the global banking sector is still in a period of transition which may include further recapitalization and require years for full recovery at some banks.

We also see a transition in government fiscal policies. Just as the U.S. consumer has shifted towards savings in response to the ongoing deleveraging process, state and local revenues continue to lag due to moderating local retail sales tax receipts and declining property valuations. Declining assistance from the federal government to state and local governments is leading to a form of government austerity irrespective of the political posturing in Washington. European governments have already put significant fiscal austerity packages in place ranging from -3% to -5%, and this will have a greater impact on their economies than ours since

over half of GDP is dependent upon the government sector in some countries. Even Europe's extensive social safety nets may also become stretched by further contraction. However, the economic pressure on many politicians to produce for constituents will climb, just as the election season approaches. The natural tendency to throw the bums out and let another party take on the reins of government may be very strong, but this often leads to fallow periods both before and after the election where little leadership is exerted or enacted which might otherwise provide economic stimulus. Thus, political transitions over the next 18 months might further slow the near term prospects for recovery.

From Despotism to Democracy?

The collective concerns of a people are rarely voiced when economic prosperity is widespread and opportunities for employment are plentiful. However, when a minority benefit to the

Alpine View

April 30, 2011 (Unaudited)

detriment of the broad populace, where their leadership's response to the distress of their people is to proverbially "let them eat cake", then we see events unfold such as the Jasmine Revolution which unseated governments in Tunisia and Egypt, and spread with horrible effect so far to the people of Libya, Syria and Yemen. When 45% to 75% of disposable income is spent on food and the rest is split on shelter and clothes, a 10% to 20% hike in the price of food stuffs and cooking fuel could dramatically reprioritize one's daily existence. Thus, the proverbial "straw which broke the camel's back" may have been mainly economic even though the underlying impetus for these political transitions included domestic and religious concerns. In this light, it is not surprising that some of the stronger emerging market economies have been raising minimum wages by double digit percentages over recent years. It may be inflationary but probably contributes long term stability.

Smoothing A Bumpy Transition to Greater Prosperity

Alpine remains sanguine on the prospects for the continued evolution of this business cycle even though some pundits believe that the era of extended business cycles is over because the unique period of falling interest rates from 1981 to the present softened downturns and sustained growth. Instead, a prolonged period of slower growth and measures to limit excess debt finance could moderate cyclical demand and supply imbalances. As a result, we believe that the current benign inflation trend can be continued in developed economies for a number of years, where the domestic expansion of emerging nations could be countered by higher domestic borrowing costs. Such an extended business cycle potentially permits the global economy to compound its gains and, hence, create more jobs than can a more volatile shorter cycle. Such a cycle might also smooth the evolution of emerging markets managing local resources, growing political and corporate transparency, enhancing positive demographic characteristics and pro-market fiscal policies can still have a significant impact on relative growth in GDP, per capita incomes, middle class expansion and attract foreign investment flows.

We believe the potential for the greatest value creation and earnings growth shall continue in countries such as Brazil, China, India and Indonesia, Thailand and the Philippines. At the same time, strategically positioned nations, which include Australia, Norway and Singapore, could also be attractive. Naturally, companies with global operating platforms which can expand in growth focused economies, should also prosper. Many such companies are domiciled in Scandinavia, Germany, Canada and the U.S.

The prospect for an extended U.S. recovery is not bleak for those who can appreciate that the economic glass is now half full. The following, chart #4, shows that we have recovered half of the household wealth lost during the recession. The ongoing deleveraging of domestic balance sheets has reduced household credit market liabilities relative to household assets which fell from a peak of over 22% to about 18.5%, half way toward the 1990's average level of 14.4%. If our economy can continue the restructuring of both bank and domestic balance sheets for another two years, it should be able to accelerate consumption and, hence, the job creation process.

Chart #4

We remain fundamentally positive that if this period of economic transition can be sustained for at least another three or four years then a solid employment base can be renewed. It is noteworthy that vast majority of the world's central banks are still maintaining positive yield curves, which is fundamentally stimulative to economic activity by pushing investors to take on greater duration risk in return for significantly higher returns. As this long term capital is deployed, we believe it will also be focused in those regions or businesses with the greatest potential, irrespective of the country or sector in which it is deployed. As we all move further away from the financial tsunami of 2008, the market will transition to a more nuanced understanding of risk and return. However, this nuanced understanding typically comes from developing a balanced perspective of opportunity for both the upside and the downside of any investment. In that context, we hope you find the reports of our individual funds which follow to be informative.

We thank you for your interest in our funds.

Sincerely,

Samuel A. Lieber
President

Manager Commentary

April 30, 2011 (Unaudited)

We are pleased to report that the Alpine Global Dynamic Dividend Fund (AGD) completed its first half fiscal 2011 with strong capital appreciation in addition to distributing a high level of dividend income. For the six months ended 4/30/11, AGD's market price appreciated by 20.50% and the Net Asset Value (NAV) grew 21.97% including dividend reinvestment. This compares favorably to a 16.36% increase in the S&P 500 Index and a 15.50% increase in the Dow Jones Euro STOXX 600 Index in U.S. dollar terms.

AGD provided an attractive dividend for our investors in fiscal first half 2011 in a still challenging equity income environment. AGD distributed a monthly dividend payment of \$0.06 per share or \$0.72 per share annualized. Since inception on July 26, 2006, AGD has paid a total of \$9.267 per share in earned income.

AGD seeks to take advantage of higher yields and attractive growth in many international markets

AGD's primary objective is high current dividend income, of which more than 50% qualifies for the reduced Federal tax rates (Qualified Dividend Income or QDI). Our secondary objective as stated in our prospectus is long-term growth of capital. The Fund helps provide global diversification for our investors, with a targeted 50-80% of our holdings being foreign companies. The Fund also has the flexibility to leverage up to 10% of its value if management believes there are opportunities for either dividend capture or capital appreciation, and we generally employ leverage during our dividend capture periods. During the period ending April 30, 2011 the Fund has used its leverage line on several occasions.

We believe AGD is well positioned to provide our investors exposure to attractive capital appreciation opportunities in many international markets and emerging markets which are experiencing strong economic growth in addition to attractive dividend yield potential. The U.S. is one of the lowest yielding countries in the group of G20 nations with a 1.80% dividend yield on 4/29/11 so we can get much better yields overseas, for example, in Australia with a 3.98% current yield, Brazil at 3.38% and the UK at 3.12% on 4/29/11. Therefore, we have designed AGD to have a significant portion of its assets invested in overseas markets to help achieve our goal of high dividends and capital appreciation in comparison to the S&P 500 Index.

As of 4/30/11, the Fund had invested 65.2% of net assets in companies based in 19 different countries and 32.4% of its value in domestic U.S. companies, with 2.4% in cash and equivalents. At the end of the fiscal first half 2011, the Fund had 28.7% of the portfolio invested in emerging market countries including Brazil, India, China, South Korea, South Africa, Turkey, and Russia. Following the United States, our current top five countries are Sweden, Brazil, Norway, the United Kingdom, and China.

We do not actively manage our country weightings—we pick our holdings on a stock-by-stock basis based on dividend potential and total return. We search for attractive value opportunities in the U.S., Europe, Latin America, and Asia. This bottoms-up approach had

taken a large portion of our international holdings to the Euro region, as the dividend payout ratios remain higher than any other region. Given the continued uncertain outlook that still remains for the Euro region, we have strived to diversify our exposure in the region away from companies with Euro denominated currencies. On 4/29/11, approximately 30% of the Fund's assets were invested in Europe, but only 4.5% in Euro denominated currencies, with the rest being in Norway, Denmark, Finland, Russia, Switzerland, and the UK. A portion of the gains of our equity positions in Europe, related to the appreciation of the Euro, were offset due to currency hedges entered into during the period.

We decided to hedge our currency exposure in Europe due to our concerns over the lingering sovereign debt crisis and we continue to diversify the portfolio globally with investments in Asia, South America, and Australia. These concerns did not materialize, and subsequent to the period ending 4/30/11, we have exited our position after the conclusion of our peak exposure during the dividend capture period. Our dividend capture strategy tends to be seasonally focused in Europe in the spring and that has begun to wind down and should be largely completed by June.

Our portfolio construction is illustrated by our top ten holdings

Throughout the fiscal first half 2011, we have continued to scan the globe searching for attractive dividend investment opportunities for our investors within these challenging global markets. The Fund combines three research-driven investment strategies: Dividend Capture, Value, and Growth to maximize the amount of distributed dividend income that is qualified for reduced Federal income tax rates and to identify companies globally with the potential for dividend increases and capital appreciation. In addition, AGD does not utilize any long term leverage, covered calls, or managed distribution to achieve its objectives. The following sections illustrate these investment strategies using our top ten holdings as examples. The top ten holdings in AGD constituted 24.1% of assets as of 4/29/11.

Our *Dividend Capture Strategy* seeks to enhance the dividend income generated by the Fund

We run a portion of our portfolio with a dividend capture strategy, where we invest in high dividend stocks or in special situations where large cash balances are being returned to shareholders as one-time special dividends. We seek to enhance the dividend return of this portfolio by electively rotating a portion of our high yielding holdings after the 61-day ownership period required to obtain the reduced 15% dividend tax rate

In fiscal first half 2011, AGD participated in a total of 16 special dividends as companies distributed some of their record excess cash levels or cash was returned to shareholders due to corporate restructurings. This compares to 22 special dividends in AGD in fiscal first half 2010. Four of our current top 10 holdings are companies that have either recently announced large special dividends

Manager Commentary

April 30, 2011 (Unaudited)

payments or there is a potential for a return of cash associated with a corporate action and we believe there is additional upside value to be realized following the dividend payment. These include Haldex, Tele2, Dollar Thrifty Group, and Atlas Copco.

We search the globe looking for special dividend opportunities as is illustrated by our largest holding in AGD on 4/30/11, Haldex AB (HLDX SS). Based in Sweden, Haldex produces proprietary products for the global auto industry and has benefited from continued improvements in its end-markets, especially heavy-duty truck and construction equipment. In February 2011, the company announced its intention to split into its three main divisions: Commercial Vehicle Systems (brake products), Hydraulic Systems, and Traction Systems (control systems for four-wheel drive cars). The Traction Systems division is being divested with the proceeds being returned to shareholders in the form of a special dividend representing approximately 30% of the company in addition to its annual 3% dividend that will both be paid in June 2011. We began acquiring Haldex in January 2011 in anticipation of this divestiture and the stock has provided a total return of 16.73% in fiscal first half 2011 for AGD.

Another top holding that is returning a large special dividend to shareholders is Tele2 AB (TEL2B SS). Also based in Sweden, Tele2 is one of Europe's largest telecommunications providers offering services in 11 countries in Europe. With a strong record of delivering profitable growth, Tele2 declared a combined ordinary and special dividend payment of nearly 19% of its market cap to be paid in May 2011. Approximately 1/3 of the dividend related to a recent tax case victory and the remaining was aimed at distributing excess cash and re-leveraging the balance sheet, which is still below the companies target debt to EBITDA range. We began acquiring Tele2 in January 2011 in anticipation of the special dividend and the stock has provided a total return of 17.43% in fiscal first half 2011 for AGD.

A top 10 holding and top performer for AGD in first half fiscal 2011 is Oklahoma-based Dollar Thrifty Automotive Group (DTG). DTG, with its Dollar and Thrifty Rent-A-Car brands, is the smallest of the four major rental car companies in the U.S., behind Avis Budget, Enterprise, and Hertz. Avis Budget began merger talks with Dollar Thrifty back in March 2008, with Hertz entering the bidding four months later. The two suitors have gone back and forth and by September 2010, both potential deals included a special dividend of \$6.87. We began buying shares in DTG in January 2011 at a price of about \$48. Hertz raised the stakes in May 2011, with a cash and stock offer worth about \$72 per share. The stock rose to over \$83 per share in early June on hopes that Avis would top the bid, and we started to take profits as we did not see significant additional upside. In mid June, Avis announced its plans to purchase Avis Europe Plc, effectively ending the bidding war for DTG and removing the prospect for a special dividend. Therefore we sold our remaining stake at around \$73 per share. The stock provided a total return of 43.26% in the fiscal first half of 2011 for AGD.

Another top 10 holding by weight and a top performing stock in the industrial sector was Atlas Copco AB (ATCOA SS). Based in Sweden, Atlas is a global industrial conglomerate that manufactures air compressors and generators, construction and mining equipment, and industrial power tools to various industries including mining, construction, manufacturing, auto, and utilities. The company has benefited from strong growth in global industrial production in the 150 countries that it serves. In addition, a high percentage of revenues were derived from aftermarket business which offered strong cash flows and greater earnings resilience than many of its peers. The company paid a combined ordinary and special dividend payment of over 5% of its market cap to investors in April and May 2011 based on its excess cash from strong operating results. The holding provided AOD with a total return of 39.35% in the six months ended 4/30/11.

Our *Value/Restructuring Strategy* looks for attractively valued or restructuring dividend payers

Our second major strategy is what we call *value with a catalyst or restructuring strategy*, where our research points to under-valued or mis-priced companies with, in our opinion, attractive dividend yields. We also look for turnaround situations or depressed earnings where we believe there is a catalyst for an earnings recovery or a restructuring or corporate action that is expected to add value. With many companies having responded to the global recession with significant corporate restructurings and are still trading at discounted valuations, it is not surprising to find several of our top 10 holdings in this strategy including KKR & Co., Marine Harvest, and Seadrill.

In the financial sector, we believe an attractive value holding and one of our top positions on 4/30/11 is KKR & Co. Based in New York, KKR is one of the world's oldest and largest private equity investment firms with over \$50 billion of assets under management. While 75% of KKR's assets are in its core private equity funds, the firm is expanding its product offerings into asset

Edgar Filing: ALPINE GLOBAL DYNAMIC DIVIDEND FUND - Form N-CSRS

management and capital markets, for example recently hiring the proprietary trading team from Goldman Sachs as the base for its equity long/short business. With the rebound in global equity markets and improved capital conditions, we believe private equity should be poised for recovery both in terms of new investments and exit strategies, and KKR has over \$13 billion of capital to deploy. The stock offered a 4.68% dividend yield as of 4/29/11 and provided AGD with a total return of 53.00% in the six months ended 4/30/11.

A value holding in the consumer staples sector and top 10 holding in the portfolio on 4/30/11 was Marine Harvest ASA (MHG NO). Based in Norway, MHG is the largest salmon producer in the world, with major fish farmeries in Norway, Canada, Scotland and Chile. With 30% of the world's production, MHG is benefitting from strong global salmon sales in addition to the recent boost in pricing following the Japan earthquake disaster as a large amount of Japan's fishery infrastructure was severely damaged. However, pricing has begun to decline as more production in Chile is coming on line and we have started to take profits in the name.

Manager Commentary

April 30, 2011 (Unaudited)

Management targets a return of about 75% of annual free cash flow to shareholders and distributed a 12% dividend in May 2011. MHG provided a 29.65% total return for ADVDX in fiscal first half 2011.

Our largest holding in the energy sector and a top 10 position by weight was Seadrill, which provided AGD with a total return of 21.26% for the six months ended 4/30/11. Seadrill Ltd. (SDRL NO), based in Bermuda, is Europe's largest offshore driller. Its aggressive newbuild program and acquisition strategy has given it one of the world's youngest fleets. Seadrill is a leader in the high-growth and technologically advanced deepwater and ultra-deepwater rig markets which are experiencing strong demand in regions like Brazil, West Africa, and the Gulf of Mexico as oil is getting harder to find and exploration is moving further out to sea. The company provided what we feel is a very attractive value with a current annual dividend yield of 8.8%.

Our *Growth and Income Strategy* targets capital appreciation in addition to yield

Our third investment strategy identifies core *growth and income* stocks that may have slightly lower but still attractive current dividend yields plus an outlook for strong and/or predictable earnings streams that should support additional future dividend increases. Several of our top ten holdings are industry leaders with strong growth in their categories and the potential for attractive and rising dividend payouts. These include ITC Holdings, Estacio, and Migros.

One of our top holding by weight in the Fund on 4/30/11 in the utility sector was ITC Holdings (ITC), based in Michigan. It is the largest U.S. independent electric transmission company with 15,000 miles of transmission lines that span five Midwestern states. As the only pure-play transmission company in the U.S., we believe that ITC is well positioned to participate in the upgrade of the nation's electric grid, a key priority for the Obama administration. ITC raised its dividend by 5% in 2010 and the company currently generates a 1.87% dividend yield as of 4/29/11. It is forecasted to possibly deliver 20% compound annual earnings per share growth in the next several years thanks to favorable regulatory treatment of electric transmission and its ambitious capital spending plan. ITC provided a 15.29% total return for AGD in fiscal first half 2011.

One of our top 10 largest holdings operates in Brazil where we see very attractive growth and income opportunities. Estacio Participacoes SA (ESTC3 BZ), based in Rio De Janeiro, is one of the largest providers of post-secondary education services in Brazil with a network of University campuses and various on-line degree programs. Estacio has benefitted from rising demand for higher education in Brazil on the strength of their emerging middle class and a young and upwardly mobile population. Estacio provided a 0.55% total return for AGD in fiscal first half 2011 as the Brazilian markets were impacted by concerns that rising interest rates would dampen growth. However, the company is growing organically and through acquisitions and is seeing margin expansion and

improvements in profitability. This is forecasted to drive compound annual earnings growth of over 30% over the next several years plus the company offers a current 2.03% dividend yield as of 4/29/11.

Rounding out our top 10 holdings in the emerging market consumer category is Migros Ticaret A.S. (MGROS TI). Based in Istanbul, Migros is Turkey's second largest retailer, operating supermarkets, hypermarkets, and discount stores in Turkey, Kazakhstan and Macedonia. Migros is poised to benefit from the growing consumer base in Eastern Europe but the stock has been hit recently due to the restructuring of its discount store format (Sok), which has been ongoing but management has decided to accelerate it into the first half of 2011. The resulting costs associated with converting and closing stores unexpectedly hit margins in 1Q11 and will also impact earnings in 2Q11 and potentially 3Q11, so we have been reducing our position on this heightened uncertainty. Migros provided a 0.96% loss for AGD in fiscal first half 2011.

Outlook for second half 2011: We remain cautiously optimistic but risks remain

We believe that a global economic recovery is still solidly in place heading into the second half of 2011 following the Great Recession of 2008/09 and the economic rebound and fiscal and monetary stimulus experienced in 2010. The U.S. is beginning to produce employment growth on the back of strong corporate profit growth and Europe is attempting to resolve its sovereign debt issues in the peripheral countries while the core countries of France, Germany, and the Scandinavians are experiencing strong economic growth. In addition, corporate balance sheet quality is at an all time high and companies are sitting on record amounts of

Edgar Filing: ALPINE GLOBAL DYNAMIC DIVIDEND FUND - Form N-CSRS

cash which should support capital growth initiatives, mergers and acquisitions, and the return of cash to shareholders via share buybacks and dividend increases.

We remain particularly optimistic about tapping opportunities to invest in growth in emerging markets like Brazil and China where strong employment and wage growth is helping to propel millions of people each year from a subsistence existence to an emerging consumer of everything from durable goods to discretionary items to healthcare. Brazil is also benefiting from large infrastructure spending in its energy sector in addition to stimulus provided by hosting the soccer World Cup games in 2014 and the summer Olympics in 2016.

However, risks and volatility remain across the globe with lingering under-employment, fiscal deficits, and austerity measures in many of the developed markets and with rising commodity and wage inflation in many of the emerging markets. These risks could combine to stifle the fragile global economic recovery in place. In addition, the S&P 500 Index has more than doubled from its March 2009 low through the recent highs achieved in May 2011 and many companies are approaching peak margins which may slow down the pace of earnings growth. So we may be entering a period of consolidation or more muted increases particularly through the low

Manager Commentary

April 30, 2011 (Unaudited)

volume summer months, but we continue to see opportunities for our investors.

Over the long term, we remain optimistic that dividend stocks will attract increasing amounts of capital as investors around the world search for income. With many companies sitting on record amounts of cash, we are hopeful that dividend increases will continue to occur in 2011 and beyond. In addition, as global demographics point to an aging population in the industrialized world, these millions of savers are facing zero to low interest rates for quarters or potentially years to come. For example, the U.S. in the 1930's and Japan in the past 20 years have shown that when interest rates go close to zero they can stay there for extended periods of time until structural economic issues are resolved. We see dividend income as an attractive investment opportunity for this increasingly large population of retirees, particularly if interest rates rise and bond valuations suffer.

In summary, we see both opportunities and risks for the remainder of 2011. Our approach during these uncertain times is to remain broadly diversified within the dividend-paying universe while actively scanning the globe for undervalued opportunities and high quality cash flow generators. We believe that we should be able to continue to distribute attractive dividend payouts by capitalizing on our research driven approach to identifying value opportunities as well as through our active management of the portfolio.

Thank you for your support of the Alpine Global Dynamic Dividend Fund and we look forward to more prosperous years in 2011 and beyond.

Sincerely,

Jill K. Evans and Kevin Shacknofsky
Co-Portfolio Managers

Past performance is not a guarantee of future results.

Please refer to the schedule of investments for fund holding information. Fund holdings and sector allocations are subject to change and should not be considered a recommendation to buy or sell any security. *Current and future portfolio holdings are subject to risk.*

Current and future portfolio holdings are subject to risk.

Equity Securities Risk The stock or other security of a company may not perform as well as expected, and may decrease in value, because of factors related to the company (such as poorer than expected earnings or certain management decisions) or to the industry in which the company is engaged (such as a reduction in the demand for products or services in a particular industry).

Leverage Risk Leverage creates the likelihood of greater volatility of net asset value; the possibility either that share income will fall if the interest rate on any borrowings rises, or that share income and distributions will fluctuate because the interest rate on any borrowings varies; and if the Fund leverages through borrowings, the Fund may not be permitted to declare dividends or other distributions with respect to its common shares or purchase its capital stock, unless at the time thereof the Fund meets certain asset coverage requirements. The Adviser in its best judgment nevertheless may determine to maintain the Fund's leveraged position if it deems such action to be appropriate in the circumstances.

The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods.

The letter represents the opinions of Alpine Funds management and are subject to change, are not guaranteed and should not be considered investment advice. The information provided is not to be a forecast of future events. Views expressed may vary from those of the firm as a whole.

Stocks are subject to fluctuation. The stock or other security of a company may not perform as well as expected, and may decrease in value, because of a variety of factors including those related to the company (such as poorer than expected earnings or certain management decisions) or to the industry in which the company is engaged (such as a reduction in the demand for products or services in a particular industry) or due to

other factors such as a rise in interest rates, for example.

All index performance reflects no deduction for direct fees, expenses or taxes. Please note that an investor cannot invest directly in an index.

Favorable tax treatment of Fund distributions may be adversely affected, changed or repealed by future changes in tax laws. Alpine may not be able to anticipate the level of dividends that companies will pay in any given timeframe.

The Fund may include equity-linked securities and various other derivative instruments, which can be illiquid, may disproportionately increase losses, and have a potentially large impact on Fund performance. Leverage may magnify gains or increase losses in the Fund's portfolio.

Diversification does not assure a profit or protect against loss in a declining market.

Investing in small and mid cap stocks involves additional risks such as limited liquidity and greater volatility as compared to large cap stocks.

Dividend Yield: The yield a company pays out to its shareholders in the form of dividends. It is calculated by taking the amount of dividends paid per share over a specific period of time and dividing by the stock's price.

Manager Commentary

April 30, 2011 (Unaudited)

The S&P 500 Index is a broad based unmanaged index of 500 stocks, which is widely recognized as representative of the equity market in general.

The Dow Jones Euro STOXX 600 (Price) Index is a broad based capitalization-weighted index of European stocks designed to provide a broad yet liquid representation of companies in the European region. The equities use free float shares in the index calculation. The index was developed with a base value of 100 as of December 31, 1991. This index uses float shares.

This being a Closed-end fund and does not continuously offer shares.

All index performance reflects no deduction for direct fees, expenses, or taxes. Please note that an investor cannot invest directly in an index.
