Enhanced Trigger Jump Securities Based on the Value of the S&P 500[®] Index due October 2, 2019

Fully and Unconditionally Guaranteed by Morgan Stanley

Principal at Risk Securities

The Enhanced Trigger Jump Securities, which we refer to as the securities, are unsecured obligations of Morgan Stanley Finance LLC (“MSFL”) and are fully and unconditionally guaranteed by Morgan Stanley. The securities will pay no interest and do not guarantee the return of any of the principal amount at maturity. At maturity, you will receive for each security that you hold an amount in cash that will vary depending on the arithmetic average of the index closing values of the S&P 500[®] Index on each of the five averaging dates (the “final index value”). If the final index value, as measured on the five averaging dates, is greater than or equal to 85% of the initial index value, which we refer to as the downside threshold level, you will receive for each security that you hold at maturity the upside payment of \$92 per security in addition to the stated principal amount. However, if the final index value is less than the downside threshold level, meaning that the underlying index has depreciated by more than 15% from its initial value, the payment due at maturity will be significantly less than the stated principal amount of the securities by an amount that is proportionate to the full percentage decrease in the final index value from the initial index value. Under these circumstances, the payment at maturity per security will be less than \$850 and could be zero. **Accordingly, you may lose your entire initial investment in the securities.** The securities are for investors who seek an equity index-based return and who are willing to risk their principal and forgo current income and upside returns above the upside payment in exchange for the upside payment feature that applies to a limited range of performance of the

underlying index. The securities are notes issued as part of MSFL's Series A Global Medium-Term Notes Program.

All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These securities are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.

FINAL TERMS

Issuer:	Morgan Stanley Finance LLC		
Guarantor:	Morgan Stanley		
Issue price:	\$1,000 per security (see "Commissions and issue price" below)		
Stated principal amount:	\$1,000 per security		
Pricing date:	June 29, 2018		
Original issue date:	July 5, 2018 (3 business days after the pricing date)		
Maturity date:	October 2, 2019		
Aggregate principal amount:	\$4,830,000		
Interest:	None		
Underlying index:	S&P 500® Index		
	<ul style="list-style-type: none"> If the final index value is greater than or equal to the downside threshold level: 		
	\$1,000 + the upside payment		
	<ul style="list-style-type: none"> If the final index value is less than the downside threshold level, meaning the value of the underlying index has declined by more than 15% from its initial index value: 		
Payment at maturity:	\$1,000 × index performance factor		
	<p><i>Under these circumstances, the payment at maturity will be significantly less than the stated principal amount of \$1,000, and will represent a loss of more than 15%, and possibly all, of your investment.</i></p>		
Upside payment:	\$92 per security (9.20% of the stated principal amount)		
Downside threshold level:	2,310.615, which is approximately 85% of the initial index value		
Index performance factor:	final index value / initial index value		
Initial index value:	2,718.37, which is the index closing value on the pricing date		
Final index value:	The arithmetic average of the index closing values on each of the five averaging dates		
Averaging dates:	September 23, 2019, September 24, 2019, September 25, 2019, September 26, 2019 and September 27, 2019, subject to postponement for non-index business days and certain market disruption events		
CUSIP:	61768C6H5		
ISIN:	US61768C6H59		
Listing:	The securities will not be listed on any securities exchange.		
Agent:	Morgan Stanley & Co. LLC ("MS & Co."), an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley. See "Supplemental information regarding plan of distribution; conflicts of interest."		
Estimated value on the pricing date:	\$986.10 per security. See "Investment Summary" beginning on page 2.		
Commissions and issue price:	Price to public⁽¹⁾ Agent's commissions and fees⁽²⁾ Proceeds to us⁽³⁾		
Per security	\$1,000	\$11.20	\$988.80
Total	\$4,830,000	\$54,096	\$4,775,904

J.P. Morgan Securities LLC and JPMorgan Chase Bank, N.A. will act as placement agents for the securities. The placement agents will forgo fees for sales to certain fiduciary accounts. The total fees represent the amount that (1) the placement agents receive from sales to accounts other than such fiduciary accounts. The placement agents will receive a fee from the Issuer or one of its affiliates that will not exceed \$11.20 per \$1,000 stated principal amount of securities.

(2) Please see “Supplemental information regarding plan of distribution; conflicts of interest” in these preliminary terms for information about fees and commissions.

(3) See “Use of proceeds and hedging” on page 13.

The securities involve risks not associated with an investment in ordinary debt securities. See “Risk Factors” beginning on page 6.

The Securities and Exchange Commission and state securities regulators have not approved or disapproved these securities, or determined if this document or the accompanying product supplement, index supplement and prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The securities are not deposits or savings accounts and are not insured by the Federal Deposit Insurance Corporation or any other governmental agency or instrumentality, nor are they obligations of, or guaranteed by, a bank.

You should read this document together with the related product supplement, index supplement and prospectus, each of which can be accessed via the hyperlinks below. Please also see “Additional Information About the Trigger Jump Securities” at the end of this document.

As used in this document, “we,” “us” and “our” refer to Morgan Stanley or MSFL, or Morgan Stanley and MSFL collectively, as the context requires.

Enhanced Trigger Jump Securities Based on the Value of the S&P 500® Index due October 2, 2019

Principal at Risk Securities

Investment Summary

Enhanced Trigger Jump Securities

Principal at Risk Securities

The Enhanced Trigger Jump Securities Based on the Value of the S&P 500® Index due October 2, 2019 (the “securities”) can be used:

§ As an alternative to direct exposure to the underlying index that provides a fixed return of 9.20% if the final index value, as measured on the five averaging dates, is greater than or equal to the downside threshold level;

§ To potentially outperform the underlying index in a moderately bullish or moderately bearish scenario;

§ To obtain limited protection against the loss of principal in the event of a decline of the underlying index over the term of the securities, but only if the final index value **is greater than or equal to the downside threshold level.**

If the final index value, as measured on the five averaging dates, is less than the downside threshold level, the securities are exposed on a 1:1 basis to the percentage decline of the final index value from the initial index value. Accordingly, investors may lose their entire initial investment in the securities.

Maturity:	Approximately 1 year and 3 months
Upside payment:	\$92 per security (9.20% of the stated principal amount)
Downside threshold level:	85% of the initial index value
Minimum payment at maturity:	None. Investors may lose their entire initial investment in the securities.
Interest:	None

The original issue price of each security is \$1,000. This price includes costs associated with issuing, selling, structuring and hedging the securities, which are borne by you, and, consequently, the estimated value of the securities on the pricing date is less than \$1,000. We estimate that the value of each security on the pricing date is \$986.10.

What goes into the estimated value on the pricing date?

In valuing the securities on the pricing date, we take into account that the securities comprise both a debt component and a performance-based component linked to the underlying index. The estimated value of the securities is determined using our own pricing and valuation models, market inputs and assumptions relating to the underlying index, instruments based on the underlying index, volatility and other factors including current and expected interest rates, as well as an interest rate related to our secondary market credit spread, which is the implied interest rate at which our conventional fixed rate debt trades in the secondary market.

What determines the economic terms of the securities?

In determining the economic terms of the securities, including the upside payment and the downside threshold level, we use an internal funding rate, which is likely to be lower than our secondary market credit spreads and therefore advantageous to us. If the issuing, selling, structuring and hedging costs borne by you were lower or if the internal funding rate were higher, one or more of the economic terms of the securities would be more favorable to you.

What is the relationship between the estimated value on the pricing date and the secondary market price of the securities?

The price at which MS & Co. purchases the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, may vary from, and be lower than, the estimated value on the pricing date, because the secondary market price takes into account our secondary market credit spread as well as the bid-offer spread that MS & Co. would charge in a secondary market transaction of this type and other factors. However,

June 2018 Page 2

Morgan Stanley Finance LLC

Enhanced Trigger Jump Securities Based on the Value of the S&P 500® Index due October 2, 2019

Principal at Risk Securities

because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, and to our secondary market credit spreads, it would do so based on values higher than the estimated value. We expect that those higher values will also be reflected in your brokerage account statements.

MS & Co. may, but is not obligated to, make a market in the securities, and, if it once chooses to make a market, may cease doing so at any time.

Principal at Risk Securities

Key Investment Rationale

This 1.25-year investment does not pay interest but offers a fixed positive return of 9.20% if the final index value, as measured on the five averaging dates, is greater than or equal to the downside threshold level and limited protection against a decline in the underlying index of up to 15%. However, if, as of the averaging dates, the value of the underlying index has declined by more than 15% from the initial index value, the payment at maturity per security will be less than \$850, and could be zero.

Upside Scenario	<i>If the final index value, as measured on the five averaging dates, is greater than or equal to the downside threshold level, the payment at maturity for each security will be equal to \$1,000 plus the upside payment of \$92.</i>
Downside Scenario	<i>If the final index value, as measured on the five averaging dates, is less than the downside threshold level, which means that the underlying index has <i>depreciated by more than 15% from its initial index value</i>, you will lose 1% for every 1% decline in the value of the underlying index from the initial index value (e.g., a 50% depreciation in the underlying index will result in a payment at maturity of \$500 per security).</i>

How the Trigger Jump Securities Work

Payoff Diagram

The payoff diagram below illustrates the payout on the securities at maturity for a range of hypothetical percentage changes in the underlying index. The diagram is based on the following terms:

Stated principal amount: \$1,000 per security
Upside payment: \$92 per security (9.20% of the stated principal amount)
Downside threshold level: 85% of the initial index value (-15% change in final index value compared with initial index value)

Trigger Jump Securities Payoff Diagram

How it works

Upside Scenario. If the final index value, as measured on the five averaging dates, is greater than or equal to the § downside threshold level, the investor would receive \$1,000 *plus* the upside payment of \$92.

Downside Scenario. If the final index value, as measured on the five averaging dates, is less than the downside § threshold level, the payment at maturity would be less than the stated principal amount of \$1,000 by an amount that is proportionate to the full percentage decrease of the underlying index.

For example, if the final index value declines by 50% from the initial index value, the payment at maturity would be 0 \$500 per security (50% of the stated principal amount).

Risk Factors

The following is a non-exhaustive list of certain key risk factors for investors in the securities. For further discussion of these and other risks, you should read the section entitled “Risk Factors” in the accompanying product supplement, index supplement and prospectus. We also urge you to consult with your investment, legal, tax, accounting and other advisers in connection with your investment in the securities.

The securities do not pay interest or guarantee any return of principal. The terms of the securities differ from those of ordinary debt securities in that the securities do not pay interest or guarantee payment of any of the principal amount at maturity. At maturity, you will receive for each \$1,000 stated principal amount of securities that you hold an amount in cash based upon the final index value. If the final index value, as measured on the five averaging dates, § is less than the downside threshold level, you will receive an amount in cash that is significantly less than the \$1,000 stated principal amount of each security by an amount proportionate to the full decline in the value of the underlying index from the initial index value to the final index value, and you will lose a significant portion or all of your investment. There is no minimum payment at maturity on the securities, and, accordingly, you could lose your entire investment. See “How the Trigger Jump Securities Work” above.

The appreciation potential is fixed and limited. Where the final index value is greater than or equal to the downside threshold level, the appreciation potential of the securities is limited to the upside payment of \$92 per § security (9.20% of the stated principal amount), even if the final index value is significantly greater than the initial index value.

The market price of the securities may be influenced by many unpredictable factors. Several factors, many of which are beyond our control, will influence the value of the securities in the secondary market and the price at which MS & Co. may be willing to purchase or sell the securities in the secondary market, including:

§ the value of the underlying index at any time (including in relation to the downside threshold level),

§ the volatility (frequency and magnitude of changes in value) of the underlying index,

§ dividend rates on the securities underlying the underlying index,

§ interest and yield rates in the market,

geopolitical conditions and economic, financial, political, regulatory or judicial events that affect the component
§ stocks of the underlying index or securities markets generally and which may affect the value of the underlying
index,

§ the time remaining until the maturity of the securities,

§ the composition of the underlying index and changes in the constituent stocks of the underlying index, and

§ any actual or anticipated changes in our credit ratings or credit spreads.

Some or all of these factors will influence the price you will receive if you sell your securities prior to maturity. For example, you may have to sell your securities at a substantial discount from the stated principal amount if at the time of sale the value of the underlying index is at or below the initial index value and especially if it is near or below the downside threshold level.

You cannot predict the future performance of the underlying index based on its historical performance. If the final index value is less than the downside threshold level, you will be exposed on a 1-to-1 basis to the full decline in the final index value from the initial index value. There can be no assurance that the final index value will be greater than or equal to the downside threshold level so that you will receive at maturity an amount that is greater than the \$1,000 stated principal amount for each security you hold, or that you will not lose a significant portion or all of your investment.

The securities are subject to our credit risk, and any actual or anticipated changes to our credit ratings or § credit spreads may adversely affect the market value of the securities. You are dependent on our ability to pay all amounts due on the securities at maturity and therefore you are subject to our credit risk. If we default on

Morgan Stanley Finance LLC

Enhanced Trigger Jump Securities Based on the Value of the S&P 500® Index due October 2, 2019

Principal at Risk Securities

our obligations under the securities, your investment would be at risk and you could lose some or all of your investment. As a result, the market value of the securities prior to maturity will be affected by changes in the market's view of our creditworthiness. Any actual or anticipated decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the market value of the securities.

As a finance subsidiary, MSFL has no independent operations and will have no independent assets. As a finance subsidiary, MSFL has no independent operations beyond the issuance and administration of its securities and will have no independent assets available for distributions to holders of MSFL securities if they make claims in respect of such securities in a bankruptcy, resolution or similar proceeding. Accordingly, any recoveries by such holders will be limited to those available under the related guarantee by Morgan Stanley and that guarantee will rank § *pari passu* with all other unsecured, unsubordinated obligations of Morgan Stanley. Holders will have recourse only to a single claim against Morgan Stanley and its assets under the guarantee. Holders of securities issued by MSFL should accordingly assume that in any such proceedings they would not have any priority over and should be treated *pari passu* with the claims of other unsecured, unsubordinated creditors of Morgan Stanley, including holders of Morgan Stanley-issued securities.

The amount payable on the securities is not linked to the value of the underlying index at any time other than the averaging dates. The final index value will be the arithmetic average of the index closing values of the underlying index on each of the five averaging dates, subject to postponement for non-index business days and certain market disruption events. Even if the value of the underlying index appreciates prior to the averaging dates § but then drops by the averaging dates, the payment at maturity may be significantly less than it would have been had the payment at maturity been linked to the value of the underlying index prior to such drop. Although the actual value of the underlying index on the stated maturity date or at other times during the term of the securities may be higher than the final index value, the payment at maturity will be based solely on the final index value, as determined on the five averaging dates.

The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the inclusion of costs associated with issuing, selling, structuring and hedging the securities in the original issue price reduce the economic terms of the securities, cause the estimated value of the securities to be less than the original issue price and will adversely affect secondary market prices. Assuming no change in market conditions § or any other relevant factors, the prices, if any, at which dealers, including MS & Co., may be willing to purchase the securities in secondary market transactions will likely be significantly lower than the original issue price, because secondary market prices will exclude the issuing, selling, structuring and hedging-related costs that are included in the original issue price and borne by you and because the secondary market prices will reflect our secondary market credit spreads and the bid-offer spread that any dealer would charge in a secondary market transaction of this type as well as other factors.

The inclusion of the costs of issuing, selling, structuring and hedging the securities in the original issue price and the lower rate we are willing to pay as issuer make the economic terms of the securities less favorable to you than they

otherwise would be.

However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, and to our secondary market credit spreads, it would do so based on values higher than the estimated value, and we expect that those higher values will also be reflected in your brokerage account statements.

The estimated value of the securities is determined by reference to our pricing and valuation models, which may differ from those of other dealers and is not a maximum or minimum secondary market price. These pricing and valuation models are proprietary and rely in part on subjective views of certain market inputs and certain assumptions about future events, which may prove to be incorrect. As a result, because there is no market-standard way to value these types of securities, our models may yield a higher estimated value of the securities than those generated by others, including other dealers in the market, if they attempted to value the securities. In addition, the estimated value on the pricing date does not represent a minimum or maximum price at which dealers, including MS & Co., would be willing to purchase your securities in the secondary market (if any exists) at any time. The value of your securities at any time after the date of this document will vary based on

June 2018 Page 7

Morgan Stanley Finance LLC

Enhanced Trigger Jump Securities Based on the Value of the S&P 500® Index due October 2, 2019

Principal at Risk Securities

many factors that cannot be predicted with accuracy, including our creditworthiness and changes in market conditions. See also “The market price of the securities may be influenced by many unpredictable factors” above.

The securities will not be listed on any securities exchange and secondary trading may be limited. The securities will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the securities. Morgan Stanley & Co. LLC, which we refer to as MS & Co., may, but is not obligated to, make a market in the securities and, if it once chooses to make a market, may cease doing so at any time. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimate of the current value of the securities, taking into account its bid/offer spread, our credit spreads, market volatility, the § notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the securities. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the securities easily. Since other broker-dealers may not participate significantly in the secondary market for the securities, the price at which you may be able to trade your securities is likely to depend on the price, if any, at which MS & Co. is willing to transact. If, at any time, MS & Co. were to cease making a market in the securities, it is likely that there would be no secondary market for the securities. Accordingly, you should be willing to hold your securities to maturity.

Investing in the securities is not equivalent to investing in the underlying index. Investing in the securities is not § equivalent to investing in the underlying index or its component stocks. Investors in the securities will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to stocks that constitute the underlying index.

Adjustments to the underlying index could adversely affect the value of the securities. The publisher of the underlying index can add, delete or substitute the stocks underlying the underlying index, and can make other methodological changes for certain events relating to the underlying stocks, such as stock dividends, stock splits, spin-offs, rights offerings and extraordinary dividends, that could change the value of the underlying index. Any of these actions could adversely affect the value of the securities. The publisher of the underlying index may also discontinue or suspend calculation or publication of the underlying index at any time. In these circumstances, MS & § Co., as the calculation agent, will have the sole discretion to substitute a successor index that is comparable to the discontinued underlying index. MS & Co. could have an economic interest that is different than that of investors in the securities insofar as, for example, MS & Co. is permitted to consider indices that are calculated and published by MS & Co. or any of its affiliates. If MS & Co. determines that there is no appropriate successor index, the payout on the securities at maturity will be an amount based on the closing prices on the averaging dates of the stocks underlying the index at the time of such discontinuance, without rebalancing or substitution, computed by the calculation agent in accordance with the formula for calculating the underlying index last in effect prior to the discontinuance of the underlying index.

§ The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the securities. As calculation agent, MS & Co. has determined the initial index value and the downside threshold level, and will determine the final index value, the index performance factor, if

applicable, and the payment that you will receive at maturity, if any. Moreover, certain determinations made by MS & Co., in its capacity as calculation agent, may require it to exercise discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption events and the selection of a successor index or calculation of the index closing value in the event of a market disruption event or discontinuance of the underlying index. These potentially subjective determinations may adversely affect the payout to you at maturity, if any. For further information regarding these types of determinations, see “Description of Securities—Postponement of Valuation Date(s),” “—Discontinuance of Any Underlying Index or Basket Index; Alteration of Method of Calculation,” “—Alternate Exchange Calculation in case of an Event of Default” and “—Calculation Agent and Calculations” in the accompanying product supplement for Jump Securities. In addition, MS & Co. has determined the estimated value of the securities on the pricing date.

Hedging and trading activity by our affiliates could potentially adversely affect the value of the securities. One or more of our affiliates and/or third-party dealers have carried out, and will continue to carry out, hedging activities § related to the securities (and to other instruments linked to the underlying index or its component stocks), including trading in the stocks that constitute the underlying index as well as in other instruments related to the underlying index. As a result, these entities may be unwinding or adjusting hedge positions during the term

Morgan Stanley Finance LLC

Enhanced Trigger Jump Securities Based on the Value of the S&P 500® Index due October 2, 2019

Principal at Risk Securities

of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the averaging dates approach. Some of our affiliates also trade the stocks that constitute the underlying index and other financial instruments related to the underlying index on a regular basis as part of their general broker-dealer and other businesses. Any of these hedging or trading activities on or prior to the pricing date could have increased the initial index value, and, therefore, could have increased the value at or above which the underlying index must close on the averaging dates so that investors do not suffer a significant loss on their initial investment in the securities. Additionally, such hedging or trading activities during the term of the securities, including on the averaging dates, could adversely affect the value of the underlying index on the averaging dates, and, accordingly, the amount of cash an investor will receive at maturity, if any.

The U.S. federal income tax consequences of an investment in the securities are uncertain. Please read the discussion under “Additional Provisions—Tax considerations” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for Jump Securities (together, the “Tax Disclosure Sections”) concerning the U.S. federal income tax consequences of an investment in the securities. If the Internal Revenue Service (the “IRS”) were successful in asserting an alternative treatment, the timing and character of income on the securities might differ significantly from the tax treatment described in the Tax Disclosure Sections. For example, under one possible treatment, the IRS could seek to recharacterize the securities as debt instruments. In that event, U.S. Holders would be required to accrue into income original issue discount on the securities every year at a § “comparable yield” determined at the time of issuance and recognize all income and gain in respect of the securities as ordinary income. Additionally, as discussed under “United States Federal Taxation—FATCA” in the accompanying product supplement for Jump Securities, the withholding rules commonly referred to as “FATCA” would apply to the securities if they were recharacterized as debt instruments. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the securities, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features. We do not plan to request a ruling from the IRS regarding the tax treatment of the securities, and the IRS or a court may not agree with the tax treatment described in the Tax Disclosure Sections.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by this notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

S&P 500® Index Overview

The S&P 500® Index, which is calculated, maintained and published by S&P Dow Jones Indices LLC (“S&P”), consists of stocks of 500 component companies selected to provide a performance benchmark for the U.S. equity markets. The calculation of the S&P 500® Index is based on the relative value of the float adjusted aggregate market capitalization of the 500 component companies as of a particular time as compared to the aggregate average market capitalization of 500 similar companies during the base period of the years 1941 through 1943. For additional information about the S&P 500® Index, see the information set forth under “S&P 500® Index” in the accompanying index supplement.

Information as of market close on June 29, 2018:

Bloomberg Ticker Symbol:	SPX
Current Index Value:	2,718.37
52 Weeks Ago:	2,419.70
52 Week High (on 1/26/2018):	2,872.87
52 Week Low (on 7/6/2017):	2,409.75

The following graph sets forth the daily closing values of the underlying index for the period from January 1, 2013 through June 29, 2018. The related table sets forth the published high and low closing values, as well as end-of-quarter closing values, of the underlying index for each quarter in the same period. The closing value of the underlying index on June 29, 2018 was 2,718.37. We obtained the information in the table and graph below from Bloomberg Financial Markets, without independent verification. The underlying index has at times experienced periods of high volatility, and you should not take the historical values of the underlying index as an indication of its future performance.

Additional Information About the Trigger Jump Securities

Please read this information in conjunction with the summary terms on the front cover of this document.

Additional Provisions:

\$1,000 and integral multiples thereof

Denominations:

Underlying index publisher: S&P Dow Jones Indices LLC

Postponement of maturity date: If any scheduled averaging date is not an index business day or if a market disruption event occurs on any averaging date so that the final averaging date is postponed and falls less than two business days prior to the scheduled maturity date, the maturity date of the securities will be postponed to the second business day following that final averaging date as postponed.

Minimum ticketing size: \$1,000 / 1 security

Tax considerations: Although there is uncertainty regarding the U.S. federal income tax consequences of an investment in the securities due to the lack of governing authority, in the opinion of our counsel, Davis Polk & Wardwell LLP, under current law, and based on current market conditions, a security should be treated as a single financial contract that is an “open transaction” for U.S. federal income tax purposes. Assuming this treatment of the securities is respected and subject to the discussion in “United States Federal Taxation” in the accompanying product supplement for Jump Securities, the following U.S. federal income tax consequences should result based on current law:
§ A U.S. Holder should not be required to recognize taxable income over the term of the securities prior to settlement, other than pursuant to a sale or exchange.
§ Upon sale, exchange or settlement of the securities, a U.S. Holder should recognize gain or loss equal to the difference between the amount realized and the U.S. Holder’s tax basis in the securities. Such gain or loss should be long-term capital gain or loss if the investor has held the securities for more than one year, and short-term capital gain or loss otherwise.

In 2007, the U.S. Treasury Department and the Internal Revenue Service (the “IRS”) released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying

property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect.

As discussed in the accompanying product supplement for Jump Securities, Section 871(m) of the Internal Revenue Code of 1986, as amended, and Treasury regulations promulgated thereunder (“Section 871(m)”) generally impose a 30% (or a lower applicable treaty rate) withholding tax on dividend equivalents paid or deemed paid to Non-U.S. Holders with respect to certain financial instruments linked to U.S. equities or indices that include U.S. equities (each, an “Underlying Security”). Subject to certain exceptions, Section 871(m) generally applies to securities that substantially replicate the economic performance of one or more Underlying Securities, as determined based on tests set forth in the applicable Treasury regulations (a “Specified Security”). However, pursuant to an IRS notice, Section 871(m) will not apply to securities issued before January 1, 2019 that do not have a delta of one with respect to any Underlying Security. Based on our determination that the securities do not have a delta of one with respect to any Underlying Security, our counsel is of the opinion that the securities should not be Specified Securities and, therefore, should not be subject to Section 871(m).

Our determination is not binding on the IRS, and the IRS may disagree with this determination. Section 871(m) is complex and its application may depend on your particular circumstances, including whether you enter into other transactions with respect to an Underlying Security. If withholding is required, we will not be required to pay any additional amounts with respect to the amounts so withheld. You should consult your tax adviser regarding the potential application of Section 871(m) to the securities.

Both U.S. and non-U.S. investors considering an investment in the securities should read the discussion under “Risk Factors” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for Jump Securities and consult their

Morgan Stanley Finance LLC

Principal at Risk Securities

tax advisers regarding all aspects of the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by the aforementioned notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

The discussion in the preceding paragraphs under “Tax considerations” and the discussion contained in the section entitled “United States Federal Taxation” in the accompanying product supplement for Jump Securities, insofar as they purport to describe provisions of U.S. federal income tax laws or legal conclusions with respect thereto, constitute the full opinion of Davis Polk & Wardwell LLP regarding the material U.S. federal tax consequences of an investment in the securities.

Trustee: The Bank of New York Mellon

Calculation agent: Morgan Stanley & Co. LLC (“MS & Co.”)

Use of proceeds and hedging: The proceeds from the sale of the securities will be used by us for general corporate purposes. We will receive, in aggregate, \$1,000 per security issued, because, when we enter into hedging transactions in order to meet our obligations under the securities, our hedging counterparty will reimburse the cost of the agent’s commissions. The costs of the securities borne by you and described beginning on page 2 above comprise the agent’s commissions and the cost of issuing, structuring and hedging the securities.

On or prior to the pricing date, we hedged our anticipated exposure in connection with the securities by entering into hedging transactions with our affiliates and/or third-party dealers. We expect our hedging counterparties to have taken positions in the stocks constituting the underlying index and in futures and/or options contracts on the underlying index or its component stocks listed on major securities markets. Such purchase activity could have increased the value of the underlying index on the pricing date, and, therefore, could have increased the value at or above which the underlying index must close on the averaging dates so that investors do not suffer a significant loss on their initial investment in the securities. In addition, through our affiliates, we are likely to modify our hedge position throughout the term of the securities, including on the averaging dates, by purchasing and selling the stocks constituting the underlying index, futures or options contracts on the underlying index or its component stocks listed on major securities markets or positions in any other available securities or instruments that we may wish to use in connection with such hedging activities. As a result, these entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the averaging dates approach. We cannot give any assurance that our hedging activities will not affect the value of the underlying index, and, therefore, adversely affect the value of the securities or the payment you will receive at maturity, if any. For further information on our use of proceeds and hedging, see “Use of Proceeds and Hedging” in the

accompanying product supplement.

Each fiduciary of a pension, profit-sharing or other employee benefit plan subject to Title I of the Employee Retirement Income Security Act of 1974, as amended (“ERISA”) (a “Plan”), should consider the fiduciary standards of ERISA in the context of the Plan’s particular circumstances before authorizing an investment in the securities. Accordingly, among other factors, the fiduciary should consider whether the investment would satisfy the prudence and diversification requirements of ERISA and would be consistent with the documents and instruments governing the Plan.

**Benefit plan
investor
considerations:**

In addition, we and certain of our affiliates, including MS & Co., may each be considered a “party in interest” within the meaning of ERISA, or a “disqualified person” within the meaning of the Internal Revenue Code of 1986, as amended (the “Code”), with respect to many Plans, as well as many individual retirement accounts and Keogh plans (such accounts and plans, together with other plans, accounts and arrangements subject to Section 4975 of the Code, also “Plans”). ERISA Section 406 and Code Section 4975 generally prohibit transactions between Plans and parties in interest or disqualified persons. Prohibited transactions within the meaning of ERISA or the Code would likely arise, for example, if the securities are acquired by or with the assets of a Plan with respect to which MS & Co. or any of its affiliates is a service provider or other party in interest, unless the securities are acquired pursuant to an exemption from the “prohibited transaction” rules. A violation of these “prohibited transaction” rules could result in an excise tax or other liabilities under ERISA and/or Section 4975 of the Code for those persons, unless exemptive relief is available under an applicable statutory or administrative exemption.

The U.S. Department of Labor has issued five prohibited transaction class exemptions (“PTCEs”) that may provide exemptive relief for direct or indirect prohibited transactions resulting from the purchase or holding of the securities. Those class exemptions are PTCE 96-23 (for certain transactions determined by in-house asset managers), PTCE 95-60 (for certain transactions involving insurance company general accounts), PTCE 91-38 (for certain transactions involving bank collective investment funds), PTCE 90-1 (for certain transactions involving insurance company separate accounts) and PTCE 84-14 (for certain transactions determined by independent qualified professional asset managers). In addition, ERISA Section 408(b)(17) and Code Section 4975(d)(20) of the Code provide an exemption for the purchase and sale of securities and the related lending transactions, provided that neither the issuer of the securities nor any of its affiliates has or exercises any discretionary authority or control or renders any investment advice with respect to the assets of the Plan involved in the transaction and provided further that the Plan pays no more, and receives no less, than “adequate consideration” in connection with the transaction (the so-called

Principal at Risk Securities

“service provider” exemption). There can be no assurance that any of these class or statutory exemptions will be available with respect to transactions involving the securities.

Because we may be considered a party in interest with respect to many Plans, the securities may not be purchased, held or disposed of by any Plan, any entity whose underlying assets include “plan assets” by reason of any Plan’s investment in the entity (a “Plan Asset Entity”) or any person investing “plan assets” of any Plan, unless such purchase, holding or disposition is eligible for exemptive relief, including relief available under PTCEs 96-23, 95-60, 91-38, 90-1, 84-14 or the service provider exemption or such purchase, holding or disposition is otherwise not prohibited. Any purchaser, including any fiduciary purchasing on behalf of a Plan, transferee or holder of the securities will be deemed to have represented, in its corporate and its fiduciary capacity, by its purchase and holding of t
