INFORMATION TO BE INCLUDED IN REPORT

1. Information Distributed to Security Holders

The registrant, KOMATSU LTD., distributed, or made available from its web-site, to its security holders either or both of the following two documents:

Edgar Filing: KOMATSU LTD - Form 6-K

- (1) Interim Report for 2002 (as of September 30, 2001) relative to the 133rd Fiscal Period; original prepared and distributed in the Japanese language which is not attached hereto as it is covered by the Semi-Annual Report referred to in (2) below;
- (2) Semi-Annual Report 2002 for the six-month period ended September 30, 2001, prepared in the English language, which is attached hereto and constitutes a part hereof.

2. Information Required to Make Public

Pursuant to Article 24-5 of the Securities Exchange Law of Japan (Law No. 25 of 1948, as amended hereinafter the "Law"), the registrant filed on December 20, 2001 with the Director of the Kanto Local Finance Bureau of the Ministry of Finance of Japan and eight stock exchanges in Japan a Semi-Annual Report (hanki-hokokusho) for the 133rd Fiscal

Period from April 1, 2001 to September 30, 2001 prepared in the Japanese language. Said Semi-Annual Report (hanki-hokokusho) was made

public in Japan by the Kanto Local Finance Bureau and by those exchanges. All significant information contained therein and required to be included herein is contained in the document identified in Item 1.(2) above attached hereto and made a part hereof.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

KOMATSU LTD.

Cautionary Statement

This semi-annual report contains forward-looking statements that reflect management's views and assumptions in the light of information currently available with respect to certain future events, including expected financial position, operating results and business strategies. These statements can be identified by the use of terms such as "will," "believes," "should," "projects" and similar terms and expressions that identify future events or expectations. Actual results may differ materially from those projected, and the events and results of such forward-looking assumptions cannot be assured.

Factors that may cause actual results to differ materially from those predicted by such forward-looking statements include, but are not limited to, unanticipated changes in demand for the Company's principal products owing to changes in the economic conditions in the Company's principal markets; changes in exchange rates; the impact of increased competition; unanticipated costs or delays encountered in achieving the Company's objectives with respect to globalized product sourcing and new Information Technology tools; uncertainties as to the results of the Company's research and development efforts and its ability to obtain and project certain intellectual property rights; and the impact of regulatory changes and revisions to accounting principles and practices.

During the fiscal 2002 interim period, ended September 30, 2001, international economies in general slowed down, and their prospects became even more uncertain under the effects of the terrorist attacks in the United States and other adverse developments. In Japan, the recessionary economy has been further deteriorating, with sharp drops in exports and production of the manufacturing industries, as well as reduced corporate earnings and capital outlays.

In overseas markets for mining and construction equipment, we saw recovery

Edgar Filing: KOMATSU LTD - Form 6-K

in demand for mining equipment and continued expansion of the Chinese market. At the same time, however, we also faced sluggish conditions in the North American market and slowing demand in European markets, which had demonstrated steady growth over the past few years. As a result, overall overseas demand remained slack during the period. In Japan, the government has cut back public investments as part of its urgent measures to accelerate structural reforms. This initiative has had considerable impact on the construction equipment market, including psychological factors, resulting in a drastic drop in demand from the corresponding period last year.

Our electronics businesses also faced a very tough market environment on the whole. International markets for semiconductors deteriorated rapidly, recording the worst fall of demand in their history in 2001. Demand for silicon wafers was no exception, with a large decline. Demand for thermoelectric modules for use in fiber optic communication networks also fell sharply, in part as a rebound from outstanding growth over last fiscal year.

Interim Results

Komatsu posted consolidated net sales of (Yen)505.4 billion (US\$4,248 million, at US\$1=(Yen)119) for the interim period under review, a decline of 8.8% from the corresponding period last year. However, the Company registered a consolidated operating loss of (Yen)5.3 billion (US\$45 million), compared to operating income of (Yen)12.8 billion for the fiscal 2001 interim period. A consolidated net loss of (Yen)42.6 billion (US\$359 million) was posted for the interim period, compared to net income of (Yen)3.1 billion a year earlier, which largely reflects (Yen)38.3 billion (US\$323 million) for the impairment of fixed assets of two subsidiaries engaging in the electronics business.

On a nonconsolidated basis, net sales for the interim period amounted to (Yen)183.3 billion (US\$1,541 million), down 11.4% from the corresponding period last year. Ordinary profit decreased 39.9%, to (Yen)2.5 billion (US\$22 million) for the interim period under review. The Company has to report a net loss of (Yen)21.9 billion (US\$184 million) for the six-month period, compared to net income of (Yen)3.7 billion for the previous corresponding period. Concerning interim cash dividends, the Board of Directors meeting, held on November 9 this year, set (Yen)3.0 (2.5 U.S. cents) per share, the same as those for the corresponding period a year ago, despite the interim net loss mentioned above.

Reform of Management Structure

To overcome such difficult management conditions, we have recently embarked on a groupwide program to reform our management structure in order to improve earnings for the early recovery of our performance. To build and solidly a corporate structure capable of securing stable earnings, we are firmly determined to accomplish a consequential amount of reduction in our fixed and production costs. At the same time, we are prepared to execute a number of decisive measures designed to accelerate the growth of our core business of construction and mining equipment. Under the leadership of the newly established Committee for Structural Reform, we are resolute in our goal of generating positive outcomes.

Reduction of Fixed Costs

We will, first of all, reduce fixed costs thoroughly. Our fixed costs, higher than those of our competitors in the international marketplace, have resulted in a weighty factor pressing our earnings. We will commit ourselves in this effort and score a reduction of (Yen)30.0 billion by the end of March 2004 from the current level on a consolidated basis. We are going to curtail a substantial amount of manpower costs and SG&A expenses through consolidation of separate businesses, reorganization and operational rationalization on a groupwide basis. In Japan, especially, we are prepared to cut down overhead costs by offering

Edgar Filing: KOMATSU LTD - Form 6-K

early retirement and transferring employees to affiliated companies in order to reinforce business operations and improve earnings of both Komatsu and affiliated companies. Specifically, we are planning to include approximately (Yen)23.0 billion as a temporary expense for both early retirement and transfers of employees to affiliated companies for the second half of fiscal 2002.

Sizable Cutbacks of Production Costs

Next, we are working to cut down our production costs worldwide. With full deployment of our technologies and expertise based on the "spirits of manufacturers" gained in Japanese plants over the years, we are set to reduce production costs at our offshore plants. To attain notable results, we will work to lower our costs substantially in the product development phase, in addition to conventional cost reduction programs. Moreover, in addition to our continued alliance with Cummins Inc. in the area of engines, we will also look into global alliances for production as represented by the recent announcement of cooperation with Volvo Construction Equipment for development and production of components for construction equipment.

To Renew Growth of Our Construction and Mining Equipment Business

To maintain and enhance our profitability in the Japanese market, where demand for construction equipment has remained depressed, we have striven to expand after-sale businesses such as rental and used equipment, parts and services, while continuing to develop creative products as represented by the GALEO series, by committing ourselves to technology innovation. Such initiatives mean a reform of our business structure itself, and these new business models are indispensable for further growth in Japan. By capitalizing on our advantage from Komatsu machines in use, which outnumber other brands in the Japanese market, and utilizing IT, we are ready to aggressively expand our business in downstream markets in line with the lifecycle of equipment.

Demand for construction and mining equipment in overseas markets has grown in a long-range time span. Therefore, we consider the current, difficult market conditions as temporary adjustments in the supply and demand cycle. We are focusing our business expansion in the major markets of North America and Europe, as well as the rapidly expanding Chinese market, where we are going to implement proactive measures by region and product line in order to enhance our global market position.

Impairment of Fixed Assets of Subsidiaries in the Electronics Business

In our electronics business, we recorded impairment losses on fixed assets of two subsidiaries in the United States during the interim period in response to the drastic deterioration of market conditions for silicon wafers.

Concerning Komatsu Silicon America, Inc., we had planned to reuse it as a production facility for silicon wafers. However, it is projected that market recovery may be delayed longer than anticipated earlier. In this light, we have changed our policy to consider a wider range of options, including the possibility of disposal. In the meantime, we will continue our silicon wafer business by focusing on Komatsu Electronic Metals Co., Ltd. and Formosa Komatsu Silicon Corporation, as before.

Demand for polycrystalline silicon as a material for silicon wafers has also weakened further since the spring of this year. Advanced Silicon Materials LLC.'s plant in Montana is unlikely to maintain a sufficient rate of operation in the foreseeable future. Thus, we recorded an impairment loss of their fixed assets.

For Komatsu to overcome the current difficult times and achieve an upturn in its performance, it is imperative that all employees of the Komatsu Group, in addition, of course, to top management, work together with individual talents

Edgar Filing: KOMATSU LTD - Form 6-K

and actions for their respective businesses. We are firmly determined to improve our earnings and make an early recovery of our business results. To this end, all employees will strive to accomplish the reform of our management structure with the spirit of unity and in superior teamwork, while each and every employee fully demonstrates his or her capabilities.

On behalf of members of the Board, we would like to extend our sincere appreciation to our valued shareholders, customers, business partners and employees around the world for their continued support.

December 2001

/s/Satoru Anzaki

/s/Masahiro Sakane

Review of Operations

Construction and Mining Equipment

Consolidated net sales of the construction and mining equipment business for the interim period declined 2.7% from the corresponding period last year, to (Yen)353.0 billion (US\$2,967 million). Nonconsolidated net sales amounted to (Yen)156.9 billion (US\$1,319 million), registering a decrease of 10.9%.

Japanese sales for the interim period fell 9.2% from the corresponding period last year, to (Yen)129.6 billion (US\$1,089 million) on a consolidated basis, while nonconsolidated sales in Japan were (Yen)93.8 billion (US\$789 million), down 10.6%. Total demand for construction equipment in Japan dropped more than anticipated, as the Japanese construction industry became increasingly reluctant to make equipment investments, because of a recessionary mindset compounded by reduced public investments.

Against this backdrop, Komatsu embarked on full-scale market launches of the new-generation construction equipment GALEO series and worked to expand sales during the interim period. We also accelerated our involvement in downstream markets. Together with our distributors and affiliated rental companies nationwide, we reinforced our sales-rental-service integrated initiatives and application-specific sales of new machines. Furthermore, we continued to offer our customers value programs such as management strategy seminars, strengthening our relationship with customers.

IT (Information Technology) is a very effective means for us to sharpen our product competitiveness and differentiation. We introduced our original KOMTRAX machine operation management system to selected models of the GALEO series as a standard feature. Based on real-time information concerning the conditions of equipment, we are now positioned to effectively deliver new services and establish new business models in which we will be able to help our customers reduce their total costs.

Consolidated overseas sales improved 1.5% over the corresponding period last year, to (Yen)223.4 billion (US\$1,878 million). Nonconsolidated overseas sales decreased 11.3%, to (Yen)63.1 billion (US\$530 million).

In North America, market demand for construction equipment slipped further, largely due to reduced equipment investment by customers who were concerned about uncertainty over the economy, inventory cutbacks by rental customers and other negative developments. Against this backdrop, we converged efforts in sales of new machines such as minimal rear-swing radius hydraulic excavators, but fell short of improving sales over the corresponding period last year.

In Europe, while major markets such as France sustained firm demand, demand sharply dropped in the largest European market of Germany. As a result, European demand, which had continued to expand since 1997, underwent a downturn for the interim period under review.

Chinese demand for construction equipment continued to sustain the momentum of rapid expansion carried over the last few years. Already with a wealth of business experience over many years, we further reinforced our business, as

Edgar Filing: KOMATSU LTD - Form 6-K

represented by the establishment of Komatsu (China) Ltd. in February, and accomplished substantial growth in sales over the corresponding period a year ago. In Southeast Asia, recovery of demand for construction equipment was delayed amid political turmoil in Indonesia and the Philippines, and our sales declined slightly from the corresponding period last year. However, we expect to improve sales for fiscal 2002 over the previous year, as demand for mining and other equipment is recovering in Indonesia in line with progress toward political stability.

Demand in the mining equipment market has been growing substantially, supported by demand for fleet renewals against the backdrops of the stabilized price of copper and increased price of coal. We have been expanding sales of super-large dump trucks, in particular, in which we enjoy the high evaluation of customers for high rates of operation and levels of reliability.

Worldwide demand for utility equipment, which had expanded steadily, declined under the effects of slowed demand in the major markets of North America and Europe. While we project a continued trend toward decreased demand into the second half, we are prepared to expand our market share and sales by introducing new models and expanding sales in regions other than North America and Europe. We are also planning to launch production in 2002 at a new plant currently under construction in South Carolina, U.S.A. With this local production, we will strive to expand sales in the North American market.

[GRAPHIC]

In line with the market launch of our GALEO series equipment, we held the "2001 New Product Debut" in Osaka and Yokohama in July by inviting some 3,000 customers nationwide. We demonstrated our solutions in 10 different market segments ranging from civil engineering, urban civil engineering and quarrying to recycling and coastal and underwater construction.

[GRAPHIC]

Komatsu Botswana (Pty) Ltd., a subsidiary of Komatsu Southern Africa (Pty) Ltd., has recently delivered new fleets of large dump trucks and bulldozers to two mines owned by Debswana Diamond Company, a joint venture formed between the Botswana government and De Beers. Shown is one of the 730E dump trucks delivered in January 2001.

Electronics

Consolidated net sales of electronic products dropped 26.2% from the previous corresponding period, to (Yen)41.0 billion (US\$345 million) for the interim period under review, as they were adversely affected by worldwide IT-triggered sluggish economies. Our nonconsolidated sales declined 45.4%, to (Yen)2.2 billion (US\$19 million) for the interim period.

On a nonconsolidated basis, sales of electronic products decreased from the corresponding period last year, as expanded sales of network terminals and new wireless LAN products were offset by dropped sales of FA-use panel computers and programmable displays.

Komatsu Electronic Metals Co., Ltd. secured profits on a nonconsolidated basis, while the market conditions for silicon wafers remained sluggish. In addition to reinforcing sales and service operations, the company worked to

Edgar Filing: KOMATSU LTD - Form 6-K

improve corporate strength by cutting total costs with substantial reduction of fixed costs. Formosa Komatsu Silicon Corporation, its subsidiary, worked to expand its product mix and export sales. However, it fell short of absorbing a loss associated with the start-up cost in Taiwan, where the semiconductor market was hit hardest.

Advanced Silicon Materials LLC., in an effort to meet a drastic decline of demand for polycrystalline silicon for semiconductors, strove to expand sales of both polycrystalline silicon for use in solar batteries and silane. However, sales for the interim period declined from the previous corresponding period. In addition to the reduced sales, the company also faced an increased burden of electric power rates due to the change in power companies. As a result of expanded production costs, the company reported an operating loss for the interim period. In relation to the cancellation of power supply contracts, the company included a penalty of (Yen)7.6 billion (US\$64 million) as nonoperating income for the interim period, which was paid by the electric power company that had canceled the supply contract. The company also reported an impairment loss of (Yen)13.4 billion (US\$113 million) on fixed assets of its Butte Plant, based on future cash flows.

Komatsu Electronics, Inc. experienced a drastic decline in sales of thermoelectric modules for use in fiber optic communication networks, compared to outstanding sales up through last year. The drop in sales during the interim period reflects reduced investments and inventory adjustments by telecommunication equipment manufacturers. Despite these conditions, the company continued to focus its efforts in the development of next-generation products. Sales of semiconductor manufacturing related equipment also dropped sharply for the interim period as client manufacturers refrained from equipment investments.

GIGAPHOTON INC., a company accounted for by the equity method and in charge of the Excimer laser business, focused on research and development of industry-pace-setting, next-generation technologies and the realignment of global sales networks. As a result, the company advanced sales for the interim period over the previous corresponding period, despite adverse effects of investment cutbacks by semiconductor manufacturers. With heavy expenses appropriated to new product development, however, the company was not able to significantly improve earnings for the interim period.

[GRAPHIC]

GIGAPHOTON has commercialized the next-generation ArF laser G40A series for steppers.

Others

Consolidated net sales of the industrial machinery and other businesses totaled (Yen)111.3 billion (US\$936 million), an 18.1% decline from the corresponding period a year ago. Nonconsolidated sales decreased 9.4%, to (Yen)24.1 billion (US\$203 million).

On a nonconsolidated basis, our large press business improved sales over the previous corresponding period. We set up an operations system capable of meeting different needs and expectations of customers promptly, thereby contributing to their business expansion, such as the Japanese automobile industry, our major customer. As a result, sales for the interim period expanded over the corresponding period a year ago.

Komatsu Industries Corporation, in charge of sheet metal forming machinery and small and medium-sized presses, advanced sales for the interim period, while the press and machine tool industries faced a very difficult environment with a downturn in industry-wide orders received. The success of the company reflects

Edgar Filing: KOMATSU LTD - Form 6-K

the positive outcome of proposal-oriented sales activities and expanded demand for medium-sized presses from automotive-related manufacturers who need larger equipment. Since the start of the new management board in 1999, the company has continued to increase orders, sales and earnings, achieving improvements for the past four consecutive interim periods.

While Japanese demand for agricultural equipment slowed down, Komatsu Zenoah Co. expanded sales of machinery for environmental conservation to the lease and rental industries in Japan. The company also registered buoyant sales of outdoor power equipment in North America and Europe supported by outstanding growth in orders for blowers developed for North America.

Komatsu Forklift Co. launched renewed models of 2-ton shovel loaders and expanded its market share substantially. The company continued to forge its alliance relationship with Linde AG of Germany, including sales of Linde-made forklift trucks in Japan since October 2000. The company also enjoyed successful production of its engine-powered forklift trucks for Europe at Fiat OM Carrelli Elevatori S.p.A. in Italy since the production start-up in January 2001. While the company concerted its efforts to expand sales both in Japan and overseas and enhance product competitiveness, they were offset by adverse effects from a drastic fall of demand for industrial vehicles in the United States. As a result, while sales for the interim period dropped sharply from the corresponding period last year, the company maintained earnings at a minimal decline.

Concerning our business with Japan's Defense Agency, sales were steady during the interim period but declined from the previous corresponding period. Sales of environmental control and systems slipped considerably.

New-Generation GALEO Series Machines Launched

We embarked on full-scale market launchings of new-generation construction and mining equipment in the GALEO series in May this year. Starting with our in-house developed HM400 articulated dump truck, we had already introduced a total of 11 new models in hydraulic excavators, bulldozers, wheel loaders and dump trucks as of the end of the interim period under review. We have incorporated the latest technologies in each model of the GALEO series on our committed criteria of safety, environmental conservation and productivity.

Cumulative Sales of 2,000 Units Achieved for the Mobile Crusher/Recycler Series

During the interim period under review, we accomplished cumulative sales of 2,000 units of the mobile crusher/recycler series of our original construction equipment exclusively designed for use in environmental conservation.

In 1992, we led others in the market introduction of a mobile debris crusher developed with our technological expertise in construction equipment. Ever since, we have been widely advocating the on-site recycling construction method, as our machines can take advantage of mobility and recycle wastes from jobsites, such as stone, concrete, wood and soil. Positioned as the frontrunner of construction equipment for environmental conservation, we are committed to providing solutions to customers' concerns for environmental protection.

One-Sided Plasma Spot Welding Machine Developed

Jointly with Toyota Auto Body Co., Ltd., we have successfully developed the one-sided plasma spot welding machine (patent pending). Utility and reliability have already been confirmed in the production line at Toyota Auto Body. Today, the two contrary properties of light weight and high rigidity are increasingly expected from automotive bodies in light of environmental protection and safety. As an innovative technology, the newly developed one-sided plasma spot welding enables auto body manufacturers to achieve this task.

Our Panel Computers Go to Local Community Network

We have delivered some 2,000 units of our WebLight network information terminal to the town of Ooi, a small rural community of 2,000 households on the coast of the Japan Sea. While our WebLight terminals are developed for industrial applications, the town office has installed them to all households as home-use information terminals as part of its local information network plan. Under this plan, the town office is offering a wide range of information services, including public administration, local news and e-mail communication among residents. Our WebLight terminals were chosen for easy operation, application and management.

[GRAPHIC]

Senior citizens and other residents have taken the introductory course, where they learned how to use our WebLight terminals.
