THE TAIWAN FUND, INC. REVIEW JANUARY 2002

Portfolio Review

We are upgrading our 2002 GDP forecast to 2.73% (from 2.0%), compared with the consensus call for growth of 1.6%. There are signs that the economy is finding a floor. The index of leading indicators recorded a marked improvement in 4Q01, it rose by 1% m/m in December following a gain of 1.2% m/m in November. External demand looks to be stabilizing. On a seasonally-adjusted m/m basis, exports posted gains in 4Q01, with the electronics sector leading the way.

The Taiwan stock market continues to rise reflecting the views that the worst is over and demand is recovering. Given the rising technology valuation premium and signs of recovery in cyclical sectors, money flowed to non-tech cyclicals, i.e. steel (up 22.2%), plastic (up 28.29%) and textiles (up 24.83%). Despite the strong performance of these non-tech sectors, we think the pick-up is seasonal and rotational buying, which tend to be short term. We still overweight the technology sector due to our belief that the sector is the most competitive industry in Taiwan. Our technology favorite fundamental trends this year are cyclical and outsourcing. For cyclical exposures, we favor TFT-LCD display and DRAM. Outsourcing play is more stock-specific. With IT spending still expected to be flat to down this year, it will truly be a case of the haves and have-nots. Bottom up stock-picking is the focus of the investment decision. Accton (networking), Realtek (IC design), Quanta (notebook), Austek (motherboard) and Beng (communication) are among our top holdings.

Taiwan s Macro Economics Review

Liquidity conditions remain ample with M1B continuing on an improving trend since April of last year resulting from the effects of the aggressive easing of monetary policy. Industry production and export orders have bottomed out during 4Q01, with the electronic sector leading the way.
