ALLEGHENY TECHNOLOGIES INCORPORATED**

(Exact name of registrant as specified in its charter)

Delaware 25-1792394
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

1000 Six PPG Place
Pittsburgh, Pennsylvania 15222-5479
(Address of Principal Executive Offices) (Zip Code)
(412) 394-2800

(Registrant's telephone number, including area code)

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the Registrant submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company
(Do not check if a smaller reporting company)

Edgar Filing: ALLEGHENY TECHNOLOGIES INC - Form 10-Q

Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
Yes No

At July 30, 2010, the registrant had outstanding 98,574,173 shares of its Common Stock.

Table of Contents**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

Unaudited

Note 1. Accounting Policies

The interim consolidated financial statements include the accounts of Allegheny Technologies Incorporated and its subsidiaries. Unless the context requires otherwise, Allegheny Technologies, ATI and the Company refer to Allegheny Technologies Incorporated and its subsidiaries.

These unaudited consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles for interim financial information and with the instructions for Form 10-Q and Article 10 of Regulation S-X. Accordingly, they do not include all of the information and note disclosures required by U.S. generally accepted accounting principles for complete financial statements. In management's opinion, all adjustments (which include only normal recurring adjustments) considered necessary for a fair presentation have been included. These unaudited consolidated financial statements should be read in conjunction with the consolidated financial statements and notes thereto included in the Company's 2009 Annual Report on Form 10-K. The results of operations for these interim periods are not necessarily indicative of the operating results for any future period. The December 31, 2009 financial information has been derived from the Company's audited financial statements.

New Accounting Pronouncements Adopted

In January 2010, the FASB issued changes to disclosure requirements for fair value measurements, including the amount of transfers between Level 1 and 2 of the fair value hierarchy, the reasons for transfers in or out of Level 3 of the fair value hierarchy and activity for recurring Level 3 measures. In addition, the changes clarify certain disclosure requirements related to the level at which fair value disclosures should be disaggregated with separate disclosures of purchases, sales, issuances and settlements, and the requirement to provide disclosures about valuation techniques and inputs used in determining the fair value of assets or liabilities classified as Levels 2 or 3. The Company adopted the disclosure changes effective January 1, 2010, except for the disaggregated Level 3 rollforward disclosures, which will be effective for fiscal year 2011.

Note 2. Inventories

Inventories at June 30, 2010 and December 31, 2009 were as follows (in millions):

	June 30, 2010	December 31, 2009
Raw materials and supplies	\$ 204.0	\$ 158.3
Work-in-process	862.7	673.9
Finished goods	95.4	96.1
Total inventories at current cost	1,162.1	928.3
Less allowances to reduce current cost values to LIFO basis	(108.3)	(102.8)
Progress payments	(0.8)	
Total inventories, net	\$ 1,053.0	\$ 825.5

Inventories are stated at the lower of cost (last-in, first-out (LIFO), first-in, first-out (FIFO), and average cost methods) or market, less progress payments. Most of the Company's inventory is valued utilizing the LIFO costing methodology. Inventory of the Company's non-U.S. operations is valued using average cost or FIFO methods. The effect of using the LIFO methodology to value inventory, rather than FIFO, increased cost of sales by \$5.5 million for the first six months of 2010 compared to a decrease to cost of sales of \$54.5 million for the first six months of 2009.

Table of Contents**Note 3. Property, Plant and Equipment**

Property, plant and equipment at June 30, 2010 and December 31, 2009 was as follows (in millions):

	June 30, 2010	December 31, 2009
Land	\$ 24.5	\$ 24.8
Buildings	611.5	590.6
Equipment and leasehold improvements	2,662.2	2,607.8
	3,298.2	3,223.2
Accumulated depreciation and amortization	(1,364.7)	(1,315.3)
Total property, plant and equipment, net	\$ 1,933.5	\$ 1,907.9

Note 4. Debt

Debt at June 30, 2010 and December 31, 2009 was as follows (in millions):

	June 30, 2010	December 31, 2009
Allegheny Technologies 4.25% Convertible Notes due 2014	\$ 402.5	\$ 402.5
Allegheny Technologies 9.375% Notes due 2019	350.0	350.0
Allegheny Technologies 8.375% Notes due 2011, net (a)	117.6	117.9
Allegheny Ludlum 6.95% debentures due 2025	150.0	150.0
Domestic Bank Group \$400 million unsecured credit facility		
Promissory note for J&L asset acquisition	15.4	20.5
Foreign credit facilities	26.7	22.1
Industrial revenue bonds, due through 2020, and other	7.9	8.1
Total short-term and long-term debt	1,070.1	1,071.1
Short-term debt and current portion of long-term debt	38.0	33.5
Total long-term debt	\$ 1,032.1	\$ 1,037.6

(a) Includes fair value adjustments for settled interest rate swap contracts of \$1.4 million at June 30, 2010 and \$1.8 million at December 31, 2009.

The Company did not borrow funds under its \$400 million senior unsecured domestic credit facility during the first six months of 2010, although approximately \$7 million has been utilized to support the issuance of letters of credit.

The unsecured facility requires the Company to maintain a leverage ratio (consolidated total indebtedness net of cash on hand in excess of \$50 million, divided by consolidated earnings before interest, taxes, depreciation and amortization, and non-cash pension expense) of not greater than 3.25, and maintain an interest coverage ratio (consolidated earnings before interest, taxes, and non-cash pension expense divided by interest expense) of not less than 2.0. For the twelve months ended June 30, 2010, the leverage ratio was 1.82, and the interest coverage ratio was 5.40.

The Company has an additional separate credit facility for the issuance of letters of credit. As of June 30, 2010, \$32 million in letters of credit was outstanding under this facility.

In addition, STAL, the Company's Chinese joint venture company in which ATI has a 60% interest, has a 205 million renminbi (approximately \$30 million at June 30, 2010 exchange rates) revolving credit facility with a group of banks. This credit facility is supported solely by STAL's financial capability without any guarantees from the joint venture partners. As of June 30, 2010, there were no borrowings under this credit facility.

Table of Contents**Note 5. Derivative Financial Instruments and Hedging**

As part of its risk management strategy, the Company, from time-to-time, utilizes derivative financial instruments to manage its exposure to changes in raw material prices, energy costs, foreign currencies, and interest rates. In accordance with applicable accounting standards, the Company accounts for most of these contracts as hedges. In general, hedge effectiveness is determined by examining the relationship between offsetting changes in fair value or cash flows attributable to the item being hedged, and the financial instrument being used for the hedge. Effectiveness is measured utilizing regression analysis and other techniques to determine whether the change in the fair market value or cash flows of the derivative exceeds the change in fair value or cash flow of the hedged item. Calculated ineffectiveness, if any, is immediately recognized on the statement of income.

The Company sometimes uses futures and swap contracts to manage exposure to changes in prices for forecasted purchases of raw materials, such as nickel, and natural gas. Under these contracts, which are generally accounted for as cash flow hedges, the price of the item being hedged is fixed at the time that the contract is entered into and the Company is obligated to make or receive a payment equal to the net change between this fixed price and the market price at the date the contract matures.

The majority of ATI's products are sold utilizing raw material surcharges and index mechanisms. However, as of June 30, 2010, the Company had entered into financial hedging arrangements primarily at the request of its customers, related to firm orders, for approximately 4% of the Company's total annual nickel requirements in 2010. A minor amount of nickel hedges extend into 2014.

At June 30, 2010, the outstanding financial derivatives used to hedge the Company's exposure to energy cost volatility included natural gas cost hedges for approximately 50% of its annual forecasted domestic requirements through 2011 and approximately 15% for 2012, and electricity hedges for Western Pennsylvania operations of approximately 40% of its forecasted on-peak and off-peak requirements for 2011 and approximately 20% for 2012.

While the majority of the Company's direct export sales are transacted in U.S. dollars, foreign currency exchange contracts are used, from time-to-time, to limit transactional exposure to changes in currency exchange rates for those transactions denominated in a non-U.S. currency. The Company sometimes purchases foreign currency forward contracts that permit it to sell specified amounts of foreign currencies expected to be received from its export sales for pre-established U.S. dollar amounts at specified dates. The forward contracts are denominated in the same foreign currencies in which export sales are denominated. These contracts are designated as hedges of the variability in cash flows of a portion of the forecasted future export sales transactions which otherwise would expose the Company to foreign currency risk. The Company may also enter into foreign currency forward contracts that are not designated as hedges, which are denominated in the same foreign currency in which export sales are denominated. At June 30, 2010, the outstanding financial derivatives, including both hedges and undesignated derivatives, that are used to manage the Company's exposure to foreign currency, primarily euros, represented approximately 20% of its forecasted total international sales through 2011. In addition, the Company may also designate cash balances held in foreign currencies as hedges of forecasted foreign currency transactions.

The Company may enter into derivative interest rate contracts to maintain a reasonable balance between fixed- and floating-rate debt. There were no unsettled derivative financial instruments related to debt balances for the periods presented, although previously settled contracts remain a component of the recorded value of debt. See Note 4. Debt, for further information.

The fair values of the Company's derivative financial instruments are presented below. All fair values for these derivatives were measured using Level 2 information as defined by the accounting standard hierarchy, which includes quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, and inputs derived principally from or corroborated by observable market data.

Table of Contents

(in millions):		June 30, 2010	December 31, 2009
Asset derivatives	Balance sheet location		
Derivatives designated as hedging instruments:			
Foreign exchange contracts	Prepaid expenses and other current assets	\$ 26.5	\$ 3.8
Nickel and other raw material contracts	Prepaid expenses and other current assets	7.0	14.9
Natural gas contracts	Prepaid expenses and other current assets	0.1	0.3
Electricity contracts	Prepaid expenses and other current assets	0.1	
Foreign exchange contracts	Other assets	7.2	3.6
Nickel and other raw material contracts	Other assets	0.2	0.5
Electricity contracts	Other assets	0.2	
Natural gas contracts	Other assets	0.1	0.3
Total derivatives designated as hedging instruments:		41.4	23.4
Derivatives not designated as hedging instruments:			
Foreign exchange contracts	Prepaid expenses and other current assets	3.6	
Foreign exchange contracts	Other assets	3.6	
Total derivatives not designated as hedging instruments:		7.2	
Total asset derivatives		\$ 48.6	\$ 23.4
Liability derivatives	Balance sheet location		
Derivatives designated as hedging instruments:			
Natural gas contracts	Accrued liabilities	\$ 14.4	\$ 10.2
Nickel and other raw material contracts	Accrued liabilities	0.7	
Foreign exchange contracts	Accrued liabilities	0.4	
Electricity contracts	Accrued liabilities	0.4	
Natural gas contracts	Other long-term liabilities	6.0	7.5
Electricity contracts	Other long-term liabilities	0.7	
Foreign exchange contracts	Other long-term liabilities	0.2	
Total liability derivatives		\$ 22.8	\$ 17.7

For derivative financial instruments that are designated as cash flow hedges, the effective portion of the gain or loss on the derivative is reported as a component of other comprehensive income (OCI) and reclassified into earnings in the same period or periods during which the hedged item affects earnings. Gains and losses on the derivative representing either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in current period results. The Company did not use fair value or net investment hedges for the periods presented. The effects of derivative instruments in the tables below are presented net of related income taxes.

Activity with regard to derivatives designated as cash flow hedges for the three and six month periods ended June 30, 2010 and June 30, 2009 was as follows (in millions):

8

Table of Contents

Derivatives in Cash Flow Hedging Relationships	Amount of Gain (Loss) Recognized in OCI on Derivatives		Amount of Gain (Loss) Reclassified from Accumulated OCI into Income		Amount of Gain (Loss) Recognized in Income on Derivatives (Ineffective Portion and Amount Excluded from Effectiveness Testing)	
	(Effective Portion)		(Effective Portion) (a)		(b)	
	Quarter ended June 30,		Quarter ended June 30,		Quarter ended June 30,	
	2010	2009	2010	2009	2010	2009
Nickel and other raw material contracts	\$ (6.7)	\$ 16.2	\$ 5.2	\$ (5.5)	\$	\$
Natural gas contracts	(0.9)	1.9	(2.8)	(4.4)		
Electricity contracts	0.8					
Foreign exchange contracts	15.0	(5.4)	4.7	1.0		
Total	\$ 8.2	\$ 12.7	\$ 7.1	\$ (8.9)	\$	\$

Derivatives in Cash Flow Hedging Relationships	Amount of Gain (Loss) Recognized in OCI on Derivatives		Amount of Gain (Loss) Reclassified from Accumulated OCI into Income		Amount of Gain (Loss) Recognized in Income on Derivatives (Ineffective Portion and Amount Excluded from Effectiveness Testing)	
	(Effective Portion)		(Effective Portion) (a)		(b)

	2010	2009	2010	2009	2010	2009
Nickel and other raw material contracts	\$ 2.0	\$ 16.1	\$ 7.4	\$ (12.0)	\$	\$
Natural gas contracts	(6.8)	(8.1)	(4.9)	(9.1)		
Electricity contracts	(0.5)					
Foreign exchange contracts	21.7	0.8	5.8	3.1		0.6
Total	\$ 16.4	\$ 8.8	\$ 8.3	\$ (18.0)	\$	\$ 0.6

(a) The gains
(losses) reclassified
from accumulated
OCI into income

related to the effective portion of the derivatives are presented in cost of sales.

- (b) The gains recognized in income on derivatives related to the ineffective portion and the amount excluded from effectiveness testing are presented in selling and administrative expenses.

Assuming market prices remain constant with those rates at June 30, 2010, a gain of \$11.1 million is expected to be recognized over the next 12 months.

The disclosures of gains or losses presented above for nickel and other raw material contracts and foreign currency contracts do not take into account the anticipated underlying transactions. Since these derivative contracts represent hedges, the net effect of any gain or loss on results of operations may be fully or partially offset.

Derivatives that are not designated as hedging instruments were as follows:

<i>In millions</i>	Amount of Gain Recognized in Income on Derivatives			
	Three Months Ended June 30,		Six Months Ended June 30,	
Derivatives Not Designated as Hedging Instruments	2010	2009	2010	2009
Foreign exchange contracts	\$ 2.2	\$	\$ 4.7	\$

Table of Contents

Changes in the fair value of foreign exchange contract derivatives not designated as hedging instruments are recorded in cost of sales.

There are no credit risk-related contingent features in the Company's derivative contracts, and the contracts contained no provisions under which the Company has posted, or would be required to post, collateral. The counterparties to the Company's derivative contracts were substantial and creditworthy commercial banks that are recognized market makers. The Company controls its credit exposure by diversifying across multiple counterparties and by monitoring credit ratings and credit default swap spreads of its counterparties. The Company also enters into master netting agreements with counterparties when possible.

Note 6. Fair Value of Financial Instruments

The estimated fair value of financial instruments at June 30, 2010 was as follows:

	Fair Value Measurements at Reporting Date			
	Total	Total	Using	Significant
	Carrying	Estimated	Quoted Prices	Observable
	Amount	Fair	in	Inputs
<i>(In millions)</i>		Value	Active Markets	(Level 2)
			for	(Level 1)
			Identical Assets	(Level 1)
Cash and cash equivalents	\$ 378.7	\$ 378.7		\$ 232.2
Derivative financial instruments:				
Assets	48.6	48.6		48.6
Liabilities	22.8	22.8		22.8
Debt (a)	1,070.1	1,249.8	1,198.9	50.9

The estimated fair value of financial instruments at December 31, 2009 was as follows:

	Fair Value Measurements at Reporting Date			
	Total	Total	Using	Significant
	Carrying	Estimated	Quoted Prices	Observable
	Amount	Fair	in	Inputs
<i>(In millions)</i>		Value	Active Markets	(Level 2)
			for	(Level 1)
			Identical Assets	(Level 1)
Cash and cash equivalents	\$ 708.8	\$ 708.8		\$ 245.1
Derivative financial instruments:				
Assets	23.4	23.4		23.4
Liabilities	17.7	17.7		17.7
Debt (a)	1,071.1	1,285.5	1,234.7	50.8

(a) Includes fair value adjustments for settled interest rate swap contracts of \$1.4 million at

June 30, 2010,
and \$1.8 million
at December 31,
2009.

In accordance with accounting standards, fair value is defined as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants at the measurement date. Accounting standards established three levels of a fair value hierarchy that prioritizes the inputs used to measure fair value. This hierarchy requires entities to maximize the use of observable inputs and minimize the use of unobservable inputs. The three levels of inputs used to measure fair value are as follows:

Level 1 Quoted prices in active markets for identical assets or liabilities.

Level 2 Observable inputs other than quoted prices included in Level 1, such as quoted prices for similar assets and liabilities in active markets; quoted prices for identical or similar assets and liabilities in markets that are not active; or other inputs that are observable or can be corroborated by observable market data.

Table of Contents

Level 3 Unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets and liabilities. This includes certain pricing models, discounted cash flow methodologies and similar techniques that use significant unobservable inputs.

The following methods and assumptions were used by the Company in estimating the fair value of its financial instruments:

Cash and cash equivalents: Cash fair value was determined using Level 1 information. Cash equivalent fair value was determined using Level 2 information.

Derivative financial instruments: Fair values for derivatives were measured using exchange-traded prices for the hedged items. The fair value was determined using Level 2 information, including consideration of counterparty risk and the Company's credit risk.

Short-term and long-term debt: The fair values of the Allegheny Technologies 4.25% Convertible Notes, the Allegheny Technologies 9.375% Notes, the Allegheny Technologies 8.375% Notes, and the Allegheny Ludlum 6.95% debentures were based on Level 1 information. The fair values of the other short-term and long-term debt were determined using Level 2 information.

Note 7. Pension Plans and Other Postretirement Benefits

The Company has defined benefit pension plans and defined contribution plans covering substantially all employees. Benefits under the defined benefit pension plans are generally based on years of service and/or final average pay. The Company funds the U.S. pension plans in accordance with the Employee Retirement Income Security Act of 1974, as amended, and the Internal Revenue Code.

The Company also sponsors several postretirement plans covering certain salaried and hourly employees. The plans provide health care and life insurance benefits for eligible retirees. In most plans, Company contributions towards premiums are capped based on the cost as of a certain date, thereby creating a defined contribution. For the non-collectively bargained plans, the Company maintains the right to amend or terminate the plans at its discretion.

For the three month periods ended June 30, 2010 and 2009, the components of pension (income) expense and components of other postretirement benefit expense for the Company's defined benefit plans included the following (in millions):

	Pension Benefits		Other Postretirement Benefits	
	Three Months Ended		Three Months Ended	
	June 30,		June 30,	
	2010	2009	2010	2009
Service cost – benefits earned during the year	\$ 7.5	\$ 6.0	\$ 0.7	\$ 0.8
Interest cost on benefits earned in prior years	33.0	34.5	7.2	8.1
Expected return on plan assets	(45.4)	(37.2)	(0.3)	(0.4)
Amortization of prior service cost (credit)	3.3	4.1	(4.5)	(4.8)
Amortization of net actuarial loss	19.4	20.2	1.5	1.6
Total retirement benefit expense	\$ 17.8	\$ 27.6	\$ 4.6	\$ 5.3

Table of Contents

For the six month periods ended June 30, 2010 and 2009, the components of pension (income) expense and components of other postretirement benefit expense for the Company's defined benefit plans included the following (in millions):

	Pension Benefits		Other Postretirement Benefits	
	Six Months Ended		Six Months Ended	
	June 30,		June 30,	
	2010	2009	2010	2009
Service cost – benefits earned during the year	\$ 15.1	\$ 12.1	\$ 1.5	\$ 1.5
Interest cost on benefits earned in prior years	66.0	68.9	14.4	16.3
Expected return on plan assets	(90.8)	(71.9)	(0.7)	(0.8)
Amortization of prior service cost (credit)	6.7	8.2	(9.0)	(9.6)
Amortization of net actuarial loss	38.7	41.8	3.0	3.2
Total retirement benefit expense	\$ 35.7	\$ 59.1	\$ 9.2	\$ 10.6

Other postretirement benefit costs for a defined contribution plan were \$0.5 million and \$1.0 million for the three and six month periods ended June 30, 2009, respectively.

Note 8. Income Taxes

Second quarter 2010 results included a provision for income taxes of \$22.4 million, or 37% of income before tax, compared to an income tax provision of \$11.7 million for the comparable 2009 period. The second quarter 2009 tax provision included a non-recurring tax charge of \$11.5 million, primarily associated with the tax consequences of the June 2009 \$350 million voluntary contribution to the pension plan.

For the first half 2010, the provision for income taxes was \$35.6 million, or 38% of income before tax, compared to \$6.7 million for the first half 2009. The first half 2010 included a non-recurring tax charge of \$5.3 million associated with the impact of the Patient Protection and Affordable Care Act. This 2010 first half tax charge was partially offset by discrete net tax benefits of \$3.7 million associated with adjustment of taxes paid in prior years, the settlement of uncertain income tax positions, and other changes. As a result of the settlements of uncertain income tax positions, the liability for unrecognized income tax benefits was reduced by \$15.9 million, including \$4.2 million related to interest and penalties, and deferred taxes increased \$11.7 million. The 2009 first half benefited from a lower income tax provision due primarily to \$5.1 million of discrete adjustments associated with prior years' taxes.

Table of Contents**Note 9. Business Segments**

Following is certain financial information with respect to the Company's business segments for the periods indicated (in millions):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2010	2009	2010	2009
Total sales:				
High Performance Metals	\$ 357.8	\$ 336.7	\$ 673.5	\$ 743.7
Flat-Rolled Products	620.4	342.1	1,141.3	729.0
Engineered Products	106.1	60.1	196.0	135.7
	1,084.3	738.9	2,010.8	1,608.4
Intersegment sales:				
High Performance Metals	16.0	16.2	29.4	35.3
Flat-Rolled Products	5.1	6.9	9.4	15.6
Engineered Products	11.2	5.8	20.6	15.9
	32.3	28.9	59.4	66.8
Sales to external customers:				
High Performance Metals	341.8	320.5	644.1	708.4
Flat-Rolled Products	615.3	335.2	1,131.9	713.4
Engineered Products	94.9	54.3	175.4	119.8
	\$ 1,052.0	\$ 710.0	\$ 1,951.4	\$ 1,541.6
Operating Profit (Loss):				
High Performance Metals	\$ 67.3	\$ 41.0	\$ 122.3	\$ 95.3
Flat-Rolled Products	42.1	22.3	73.5	30.0
Engineered Products	7.9	(9.4)	9.7	(15.5)
Total operating profit	117.3	53.9	205.5	109.8
Corporate expenses	(15.0)	(8.6)	(27.3)	(23.0)
Interest expense, net	(15.4)	(1.3)	(30.0)	(1.2)
Other expense, net of gains on asset sales	(3.9)	(1.4)	(9.7)	(5.4)
Debt extinguishment costs		(9.2)		(9.2)
Retirement benefit expense	(22.4)	(33.4)	(44.9)	(70.7)
Income before income taxes	\$ 60.6	\$	\$ 93.6	\$ 0.3

Retirement benefit expense represents defined benefit plan pension expense, and other postretirement benefit expense for both defined benefit and defined contribution plans. Operating profit with respect to the Company's business segments excludes any retirement benefit expense.

Corporate expenses for the three months ended June 30, 2010 were \$15.0 million, compared to \$8.6 million for the three months ended June 30, 2009. This change is due primarily to decreased expenses in 2009 associated with annual

and long-term performance-based cash incentive compensation programs resulting from a lower level of profitability.

Other expense, net of gains on asset sales, primarily includes charges incurred in connection with closed operations and other non-operating income or expense. These items are presented primarily in selling and administrative expenses and in other expense in the statement of operations. These items resulted in net charges of \$3.9 million for the three months ended June 30, 2010 and \$1.4 million for the three months ended June 30, 2009. This increase was primarily related to higher expenses at closed operations and foreign currency remeasurement losses.

Table of Contents**Note 10. Per Share Information**

The following table sets forth the computation of basic and diluted net income per common share (in millions, except per share amounts):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2010	2009	2010	2009
Numerator for basic net income (loss) per common share -				
Net income (loss) attributable to ATI	\$ 36.4	\$ (13.4)	\$ 54.6	\$ (7.5)
Effect of dilutive securities:				
4.25% Convertible Notes due 2014	2.2		4.4	
Numerator for diluted net income (loss) per common share -				
Net income (loss) available to ATI after assumed conversions	\$ 38.6	\$ (13.4)	\$ 59.0	\$ (7.5)
Denominator for basic net income (loss) per common share-weighted average shares	97.5	97.2	97.4	97.2
Effect of dilutive securities:				
Share-based compensation	1.3		1.4	
4.25% Convertible Notes due 2014	9.6		9.6	
Denominator for diluted net income (loss) per common share adjusted weighted average shares assuming conversions	108.4	97.2	108.4	97.2
Basic net income (loss) attributable to ATI per common share	\$ 0.37	\$ (0.14)	\$ 0.56	\$ (0.08)
Diluted net income (loss) attributable to ATI per common share	\$ 0.36	\$ (0.14)	\$ 0.54	\$ (0.08)

Common stock that would be issuable upon the assumed conversion of the 2014 Convertible Notes and other option equivalents and contingently issuable shares were excluded from the computation of contingently issuable shares, and therefore, from the denominator for diluted earnings per share, if the effect of inclusion would have been anti-dilutive. Excluded shares for the three and six month periods ended June 30, 2009 were 4.3 million and 2.4 million, respectively.

Table of Contents**Note 11. Financial Information for Subsidiary and Guarantor Parent**

The payment obligations under the \$150 million 6.95% debentures due 2025 issued by Allegheny Ludlum Corporation (the Subsidiary) are fully and unconditionally guaranteed by Allegheny Technologies Incorporated (the Guarantor Parent). In accordance with positions established by the Securities and Exchange Commission, the following financial information sets forth separately financial information with respect to the Subsidiary, the non-guarantor subsidiaries and the Guarantor Parent. The principal elimination entries eliminate investments in subsidiaries and certain intercompany balances and transactions. Investments in subsidiaries, which are eliminated in consolidation, are included in other assets on the balance sheets.

Allegheny Technologies is the plan sponsor for the U.S. qualified defined benefit pension plan (the Plan) which covers certain current and former employees of the Subsidiary and the non-guarantor subsidiaries. As a result, the balance sheets presented for the Subsidiary and the non-guarantor subsidiaries do not include any Plan assets or liabilities, or the related deferred taxes. The Plan assets, liabilities and related deferred taxes and pension income or expense are recognized by the Guarantor Parent. Management and royalty fees charged to the Subsidiary and to the non-guarantor subsidiaries by the Guarantor Parent have been excluded solely for purposes of this presentation.

Cash flows related to intercompany activity between the Guarantor Parent, the Subsidiary, and the non-guarantor subsidiaries are presented as financing activities on the condensed statements of cash flows.

Note 12. Commitments and Contingencies

The Company is subject to various domestic and international environmental laws and regulations that govern the discharge of pollutants and disposal of wastes, and which may require that it investigate and remediate the effects of the release or disposal of materials at sites associated with past and present operations. The Company could incur

substantial cleanup costs, fines, and civil or criminal sanctions, third party property damage or personal injury claims as a result of violations or liabilities under these laws or noncompliance with environmental permits required at its facilities. The Company is currently involved in the investigation and remediation of a number of its current and former sites, as well as third party sites.

Environmental liabilities are recorded when the Company's liability is probable and the costs are reasonably estimable. In many cases, however, the Company is not able to determine whether it is liable or, if liability is probable, to reasonably estimate the loss or range of loss. Estimates of the Company's liability remain subject to additional uncertainties, including the nature and extent of site contamination, available remediation alternatives, the

Table of Contents

extent of corrective actions that may be required, and the number, participation, and financial condition of other potentially responsible parties (PRPs). The Company expects that it will adjust its accruals to reflect new information as appropriate. Future adjustments could have a material adverse effect on the Company s results of operations in a given period, but the Company cannot reliably predict the amounts of such future adjustments.

Based on currently available information, the Company does not believe that there is a reasonable possibility that a loss exceeding the amount already accrued for any of the sites with which the Company is currently associated (either individually or in the aggregate) will be an amount that would be material to a decision to buy or sell the Company s securities. Future developments, administrative actions or liabilities relating to environmental matters, however, could have a material adverse effect on the Company s financial condition or results of operations.

At June 30, 2010, the Company s reserves for environmental remediation obligations totaled approximately \$18 million, of which \$8 million was included in other current liabilities. The reserve includes estimated probable future costs of \$6 million for federal Superfund and comparable state-managed sites; \$7 million for formerly owned or operated sites for which the Company has remediation or indemnification obligations; \$3 million for owned or controlled sites at which Company operations have been discontinued; and \$2 million for sites utilized by the Company in its ongoing operations. The Company continues to evaluate whether it may be able to recover a portion of future costs for environmental liabilities from third parties.

The timing of expenditures depends on a number of factors that vary by site. The Company expects that it will expend present accruals over many years and that remediation of all sites with which it has been identified will be completed within thirty years.

See Note 16. Commitments and Contingencies to the Company s consolidated financial statements in the Company s Annual Report on Form 10-K for its fiscal year ended December 31, 2009 for a discussion of legal proceedings affecting the Company.

In November 2007, the EPA sent a subsidiary of the Company a Notice of Violation (NOV) alleging that the company s Natrona, PA facility is operating in violation of the Clean Air Act. The notice invited the company to meet with the EPA to discuss a resolution of the NOV. The Company and the EPA resolved the allegations by entering into a Consent Decree that was approved by the United States District Court for the Western District of Pennsylvania, including \$1.6 million of civil penalties, which were fully reserved at June 30, 2010. In addition, the Company agreed to close its Natrona, PA melt shop prior to November 30, 2010, which is part of its previously announced plans to consolidate the Natrona operations with its Brackenridge facility.

A number of other lawsuits, claims and proceedings have been or may be asserted against the Company relating to the conduct of its currently and formerly owned businesses, including those pertaining to product liability, patent infringement, commercial, government contract work, employment, employee benefits, taxes, environmental, health and safety, occupational disease, and stockholder matters. While the outcome of litigation cannot be predicted with certainty, and some of these lawsuits, claims or proceedings may be determined adversely to the Company, management does not believe that the disposition of any such pending matters is likely to have a material adverse effect on the Company s financial condition or liquidity, although the resolution in any reporting period of one or more of these matters could have a material adverse effect on the Company s results of operations for that period.

Item 2. Management s Discussion and Analysis of Financial Condition and Results of Operations**Overview**

Allegheny Technologies is one of the largest and most diversified specialty metals producers in the world. We use innovative technologies to offer global markets a wide range of specialty metals solutions. Our products include titanium and titanium alloys, nickel-based alloys and superalloys, zirconium, hafnium, and niobium, advanced powder alloys, stainless and specialty steel alloys, grain-oriented electrical steel, tungsten-based materials and cutting tools, carbon alloy impression die forgings, and large grey and ductile iron castings. Our specialty metals are produced in a wide range of alloys and product forms and are selected for use in applications that demand metals having exceptional hardness, toughness, strength, resistance to heat, corrosion or abrasion, or a combination of these characteristics.

Table of Contents**Results of Operations**

We operate in three business segments: High Performance Metals, Flat-Rolled Products, and Engineered Products. These segments represented the following percentages of our total revenues and segment operating profit for the first six months of 2010 and 2009:

	2010		2009	
	Revenue	Operating Profit	Revenue	Operating Profit (Loss)
High Performance Metals	33%	59%	46%	87%
Flat-Rolled Products	58%	36%	46%	27%
Engineered Products	9%	5%	8%	(14%)

Sales for the second quarter 2010 increased 48% to \$1.05 billion, compared to the second quarter 2009, primarily as a result of higher shipments and transactional selling prices for most products. Compared to the second quarter 2009, sales increased 7% in the High Performance Metals segment, 84% in the Flat-Rolled Products segment and 75% in the Engineered Products segment. Compared to the first quarter 2010, total sales were 17% higher with increases of 13% in the High Performance Metals segment, 19% in the Flat-Rolled Products segment, and 18% in the Engineered Products segment primarily as a result of higher Flat-Rolled Products and Engineered Products shipments, higher raw material surcharges and increases in average base selling prices for certain products.

For the six months ended June 30, 2010, sales were \$1.95 billion, an increase of 27% compared to the same period of 2009. 2010 first half sales increased 59% in the Flat-Rolled Products segment and 46% in the Engineered Products segment but decreased 9% in the High Performance Metals segment compared to the 2009 period.

Demand from the global aerospace and defense, electrical energy, oil and gas, chemical process industry, and medical markets accounted for nearly 70% of our sales for the first six months of 2010. Aerospace and defense represented 25% of our sales for the first six months of 2010, with the oil and gas and chemical process industry markets representing 20% of total sales, and sales to the electrical energy market representing 18%. During the 2010 first half, demand from these markets continued to improve, particularly for air frames and jet engines, compared to the second half of 2009.

For the first half 2010, direct international sales were 34% of total sales compared to 31% for the comparable 2009 period. Sales of our high-value products (titanium and titanium alloys, nickel-based alloys and specialty alloys, exotic alloys, grain-oriented electrical steel, precision and engineered strip, and tungsten materials) represented 70% of total sales compared to 81% of sales in the first half 2009. Titanium product shipments, including ATI-produced products for our Uniti titanium joint venture, were 18.9 million pounds in the first half 2010, which represents 15% of total sales, and compares to 20.2 million pounds in the first half 2009.

Segment operating profit for the second quarter 2010 increased to \$117.3 million, or 11.2% of sales, compared to \$53.9 million, or 7.6% of sales, in the second quarter 2009. For the first half 2010, segment operating profit increased to \$205.5 million, or 10.5% of sales, compared to \$109.8 million, or 7.1%, in the comparable period 2009. While operating profit improved across all three business segments, results for the 2010 second quarter and first half were adversely affected by idle facility and start-up costs of \$8.9 million and \$20.4 million, respectively, primarily impacting our High Performance Metals segment. The start-up costs relate mostly to our Rowley, UT premium-titanium sponge facility. We plan to ramp production at this new facility throughout 2010 in a systematic manner. Idle facility costs relate mostly to our Albany, OR titanium sponge facility, which is positioned to be back in production when warranted by market conditions. Results for the second quarter and first half 2010 included a LIFO inventory valuation reserve charge of \$5.5 million. Second quarter 2010 benefited from gross cost reductions, before the effects of inflation, of \$35.3 million, bringing gross cost reductions for the 2010 first half to \$72.3 million.

The selling prices for many of our products include surcharges or indices by which we attempt to match changes in raw material costs, and in some cases energy costs, with shipments. The second quarter and first half 2009 results were adversely impacted by approximately \$17 million and \$83 million, respectively, in out-of-phase raw material surcharges and indices due primarily to the rapid decrease in the cost of raw materials in late 2008.

Table of Contents

This was partially offset by a LIFO inventory valuation reserve benefit of \$27.0 million in the 2009 second quarter, and \$54.5 million in the first half 2009 as a result of a decline in raw material costs in 2009.

Segment operating profit (loss) as a percentage of sales for the three month and six month periods ended June 30, 2010 and 2009 was:

	Three Months Ended		Six Months Ended	
	June 30,		June 30,	
	2010	2009	2010	2009
High Performance Metals	19.7%	12.8%	19.0%	13.5%
Flat-Rolled Products	6.8%	6.7%	6.5%	4.2%
Engineered Products	8.3%	(17.3%)	5.5%	(12.9%)

Our measure of segment operating profit, which we use to analyze the performance and results of our business segments, excludes income taxes, corporate expenses, net interest income or expense, retirement benefit expense, and other costs net of gains on asset sales. We believe segment operating profit, as defined, provides an appropriate measure of controllable operating results at the business segment level.

In June 2009, we completed several proactive liability management actions including the issuance \$350 million of 9.375% 10-year Senior Notes and \$402.5 million of 4.25% 5-year Convertible Senior Notes. The net proceeds of the debt issuances were used to retire \$183.3 million of 8.375% Notes due in 2011, and to make a \$350 million voluntary cash contribution to our U.S. defined benefit pension plan to significantly improve the plan's funded position, with the balance of the proceeds being used for general corporate purposes. As a result of these actions, in the 2009 second quarter, we recognized a charge of \$9.2 million pre-tax, or \$5.5 million after-tax, for debt retirement expense and a discrete tax charge of \$11.5 million, primarily associated with the tax consequences of the \$350 million voluntary pension contribution.

Income before tax for the 2010 second quarter and first half benefited from decreased retirement benefit expenses of \$11.0 million and \$25.8 million, respectively, due to higher than expected returns on pension plan assets in 2009 and the benefits resulting from our voluntary pension contributions over the past several years. However, interest expense, net of interest income, increased \$14.1 million and \$28.8 million for the three and six months ended June 30, 2010, respectively, primarily due to the debt issuances in the second quarter 2009 and lower interest expense capitalized on strategic projects due to project completions.

Income before tax for the second quarter 2010 was \$60.6 million compared to break-even results for the second quarter 2009. For the first half 2010, income before tax was \$93.6 million compared to \$0.3 million for the comparable period of 2009.

Net income attributable to ATI for the second quarter 2010 was \$36.4 million, or \$0.36 per share. For the second quarter 2009, we reported a net loss attributable to ATI, including special charges, of \$13.4 million, or \$0.14 per share. The second quarter 2009 included non-recurring after-tax charges of \$17.0 million, or \$0.17 per share, related to debt retirement expense and the tax consequences of our \$350 million voluntary pension contribution discussed above. Excluding these special charges, net income attributable to ATI was \$3.6 million, or \$0.03 per share.

For the six months ended June 30, 2010, net income attributable to ATI, including special charges, was \$54.6 million, or \$0.54 per share. Results included a 2010 first quarter non-recurring tax charge of \$5.3 million related to the Patient Protection and Affordable Care Act. Excluding this non-recurring tax charge, net income attributable to ATI was \$59.9 million, or \$0.60 per share. For the six months ended June 30, 2009, net loss attributable to ATI, including special charges, was \$7.5 million, or \$0.08 per share. Excluding special charges, results for the six months ended June 30, 2009 were net income attributable to ATI of \$9.5 million, or \$0.09 per share.

We continued to maintain our solid balance sheet. We ended the 2010 first half with cash on hand of \$378.7 million. Cash flow used in operations for the first half 2010 was \$193.4 million as investment in managed working capital of \$346.8 million, due to improving business activity and higher raw material costs, offset increased

Table of Contents

profitability. Net debt to total capitalization was 25.2% and total debt to total capitalization was 34.3% at June 30, 2010.

Looking ahead to the second half of 2010, our key markets are performing well. The aerospace market continues to improve and we are seeing improved demand from oil and gas and chemical processing projects in Asia and the Middle East. Caution best describes our standard stainless steel business, which reflects falling raw materials costs and uncertain economic conditions.

We expect our High Performance Metals segment performance to improve quarter to quarter by about 7% to 8% per quarter. We expect normal third quarter seasonal adjustments in our Engineered Products segment. In our Flat-Rolled Products segment, we expect performance to be significantly negatively impacted by out-of-phase surcharges due to the rapid decline in nickel prices from the highs reached in April and May and lower volumes of our standard stainless products. Customers are taking a wait-and-see attitude as raw materials prices moderate and concerns exist in the economy. We expect a fourth quarter rebound in demand for our standard stainless products because of restocking in the supply chain and because end-use demand does not appear to be deteriorating.

Our focus remains to execute as well as possible in the third quarter and continue to position ATI for the expected strong growth trends in our key global markets. Beyond 2010, we expect to recover and grow faster than our key markets as a result of new customers and long-term agreements, the growing use of our innovative new products, our new technically advanced manufacturing capabilities, and a global focus on our key markets.

High Performance Metals Segment

Second quarter 2010 sales increased 7% to \$341.8 million compared to the same 2009 period. Shipments increased 20% for titanium and titanium alloys and 16% for nickel-based and specialty alloys primarily due to improved demand from the commercial aerospace jet engine market. Shipments of exotic alloys decreased 15% primarily due to the timing of projects for the chemical process industry. Average selling prices declined 13% for titanium and titanium alloys due to a more competitive pricing environment, but increased 2% for nickel-based and specialty alloys primarily as a result of higher raw material surcharges. Average selling prices for exotic alloys increased 4% due to favorable product mix.

Segment operating profit in the 2010 second quarter increased to \$67.3 million, or 19.7% of sales, compared to \$41 million, or 12.8% of sales, for the second quarter 2009. The increase in operating profit primarily resulted from higher shipments, a better matching of surcharges and raw material costs, and the benefits of gross cost reductions. In addition, second quarter 2010 operating profit was adversely affected by approximately \$7.9 million of start-up and idle facility costs associated with our titanium sponge operations. Second quarter results included a LIFO inventory valuation reserve charge of \$2.1 million for the 2010 period compared to a \$0.5 million charge for the 2009 period.

Segment results benefited from \$17.6 million of gross cost reductions, bringing first half 2010 gross cost reductions to \$35.8 million.

Certain comparative information on the segment's major products for the three months ended June 30, 2010 and 2009 is provided in the following table:

	Three Months Ended		% Change
	2010	June 30, 2009	
Volume (000's pounds):			
Titanium mill products	7,138	5,960	20%
Nickel-based and specialty alloys	9,517	8,171	16%
Exotic alloys	1,143	1,347	(15%)
Average prices (per pound):			
Titanium mill products	\$ 18.49	\$ 21.30	(13%)
Nickel-based and specialty alloys	\$ 13.30	\$ 13.04	2%
Exotic alloys	\$ 60.54	\$ 58.42	4%

Table of Contents

For the six months ended June 30, 2010, segment sales decreased 9% to \$644.1 million. Shipments increased 3% for titanium and titanium alloys but decreased 1% for nickel-based and specialty alloys as demand from the commercial aerospace market began to recover from the trough in the 2009 second half. Shipments of exotic alloys decreased 19% primarily due to the timing of projects for the chemical process industry. Average selling prices declined 15% for titanium and titanium alloys and 4% for nickel-based and specialty alloys primarily due to a more competitive pricing environment. Average selling prices for exotic alloys increased 5% due to a favorable product mix.

Segment operating profit for the 2010 first half increased to \$122.3 million, or 19.0% of sales, compared to \$95.3 million, or 13.5% of sales, for the comparable 2009 period. The increase in operating profit primarily resulted from a better matching of surcharges and raw material costs, and the benefits of gross cost reductions which offset lower average selling prices for most products, and lower shipments of exotic alloys. Operating profit for the 2009 first half was adversely affected by approximately \$24 million from the impact of higher cost raw materials, primarily nickel and titanium, purchased in prior periods flowing through cost of sales and not being in phase with the raw material indices included in our selling prices. This was due primarily to the rapid decrease in raw material costs in late 2008 and the long manufacturing times of some of our products. In addition, 2010 first half operating profit was adversely affected by approximately \$17.8 million of idle facility and start-up costs. Operating profit for the first six months of 2010 and 2009 included \$2.1 million and \$0.5 million, respectively, of LIFO inventory valuation reserve charges.

Certain comparative information on the segment's major products for the six months ended June 30, 2010 and 2009 is provided in the following table:

	Six Months Ended June 30,		%
	2010	2009	Change
Volume (000's pounds):			
Titanium mill products	13,235	12,898	3%
Nickel-based and specialty alloys	17,961	18,141	(1%)
Exotic alloys	2,124	2,636	(19%)
Average prices (per pound):			
Titanium mill products	\$ 18.64	\$ 21.94	(15%)
Nickel-based and specialty alloys	\$ 13.41	\$ 13.97	(4%)
Exotic alloys	\$ 60.67	\$ 57.76	5%

Flat-Rolled Products Segment

Second quarter 2010 sales increased to \$615.3 million, 84% higher than the second quarter 2009, primarily due to increased shipments, higher raw material surcharges, and improved base-selling prices for stainless products. Shipments of standard stainless products (sheet and plate) increased 50% and high-value products shipments increased 34%. Average transaction prices for all products, which include surcharges, were 32% higher due to increased raw material surcharges and improved base prices for stainless products.

Segment operating profit for the 2010 second quarter improved to \$42.1 million, or 6.8% of sales, compared to \$22.3 million, or 6.7% of sales, for the second quarter 2009 due primarily to increased shipments and higher base prices for stainless products. A LIFO inventory valuation reserve charge of \$1.6 million was recognized in the second quarter 2010. The 2009 second quarter included a LIFO inventory valuation benefit of \$26.1 million.

Segment results benefited from \$12.5 million in gross cost reductions, bringing first half 2010 gross cost reductions in this segment to \$26.6 million.

Comparative information on the segment's products for the three months ended June 30, 2010 and 2009 is provided in the following table:

Table of Contents

	Three Months Ended		% Change
	June 30,		
	2010	2009	
Volume (000 s pounds):			
High value	112,979	84,190	34%
Standard	177,539	118,211	50%
Total	290,518	202,401	44%
Average prices (per lb.):			
High value	\$ 2.83	\$ 2.40	18%
Standard	\$ 1.65	\$ 1.03	60%
Combined Average	\$ 2.11	\$ 1.60	32%

For the six months ended June 30, 2010, sales increased to \$1.13 billion, 59% higher than the 2009 period, primarily due to higher shipments and raw material surcharges, and improved base-selling prices for stainless products. Shipments of standard stainless products (sheet and plate) increased 52% and high-value products shipments increased 25%. Average transaction prices for all products, which include surcharges, were 15% higher due to increased raw material surcharges and improved base prices for stainless products.

Segment operating profit for the six months of 2010 improved to \$73.5 million, or 6.5% of sales, compared to \$30.0 million, or 4.2% of sales, for the 2009 period due primarily to increased shipments and higher base prices for stainless products plus a better matching of surcharges with raw material costs. Operating profit for the 2009 first half was adversely affected by \$59 million of higher cost raw materials purchased in 2008 flowing through cost of sales and not being in phase with raw material surcharges included in selling prices. This was due primarily to the rapid decrease in raw material costs in the second half of the fourth quarter 2008 and the long manufacturing times of some of our products. This negative impact was partially offset by a \$52.3 million decrease in the LIFO inventory valuation reserve in the 2009 first half. Operating profit for the 2010 first half included a LIFO inventory valuation reserve charge of \$1.6 million.

Comparative information on the segment s products for the six months ended June 30, 2010 and 2009 is provided in the following table:

	Six Months Ended		% Change
	June 30,		
	2010	2009	
Volume (000 s pounds):			
High value	223,474	178,118	25%
Standard	334,390	219,785	52%
Total	557,864	397,903	40%
Average prices (per lb.):			
High value	\$ 2.71	\$ 2.53	7%
Standard	\$ 1.55	\$ 1.11	40%
Combined Average	\$ 2.02	\$ 1.75	15%

Engineered Products Segment

Sales for the second quarter and first half of 2010 were \$94.9 million and \$175.4 million, respectively, which were 75% and 46% higher than the same periods of 2009. Demand for our tungsten and tungsten carbide products, forged products, and cast products improved from most markets, including oil and gas, cutting tools, transportation, aerospace, electrical energy, and automotive. Segment operating profit for the 2010 second quarter and first half was

\$7.9 million and \$9.7 million, respectively, compared to losses of \$9.4 million and \$15.5 million in the comparable 2009 periods. The improvement in operating profit was primarily due to significantly increased demand and the improvement in operating costs resulting from better operating rates compared to 2009. Operating profit for the 2010 second quarter and first half was adversely affected by a LIFO inventory valuation reserve charge of \$1.8

Table of Contents

million. Segment results benefited from a \$1.4 million decrease in the LIFO inventory valuation reserve for the 2009 second quarter and a \$2.7 million decrease for the 2009 first half.

Results for 2010 also benefited from \$5.2 million of gross cost reductions in the second quarter 2010, bringing first half 2010 gross cost reductions to \$9.9 million.

Corporate Items

Corporate expenses increased to \$15.0 million for the second quarter of 2010, compared to \$8.6 million in the year-ago period. For the six months ended June 30, 2010, corporate expenses increased to \$27.3 million compared to \$23.0 million in the prior year-to-date period. These changes were primarily due to decreased expenses in 2009 associated with annual and long-term performance-based cash incentive compensation programs resulting from a lower level of profitability.

Interest expense, net of interest income, in the second quarter 2010 was \$15.4 million, compared to interest expense of \$1.3 million in the second quarter 2009. For the six months ended June 30, 2010, net interest expense was \$30.0 million compared to \$1.2 million in the prior year-to-date period. The increase in interest expense was primarily due to debt issuances in the second quarter 2009 and lower capitalized interest on strategic projects due to project completions. Interest expense benefited from the capitalization of interest costs on strategic capital projects of \$7.4 million in the first six months of 2010 and by \$19.7 million in the first six months of 2009.

In June 2009, we completed a tender offer resulting in the retirement of \$183.3 million of the Company's 8.375% notes due in December 2011, which left \$116.7 million in face value of the 2011 Notes outstanding at the end of June 2010. As a result of this transaction, we recognized a pre-tax charge of \$9.2 million in the 2009 second quarter for the costs of the debt retirement.

Other expense, net of gains on asset sales, primarily includes charges incurred in connection with closed operations and other assets, and other non-operating income or expense. These items are presented primarily in selling and administration expenses, and in other income (expense) in the statement of operations and resulted in other expense of \$3.9 million for the second quarter 2010 and \$1.4 million for the second quarter 2009. For the six months ended June 30, 2010, other expense, net of gains on asset sales, was \$9.7 million, compared to \$5.4 million for the comparable 2009 period. The changes in expenses primarily related to the recognition of foreign currency gains and losses, and legal expenses.

Retirement benefit expense, which includes pension expense and other postretirement expense, decreased to \$22.4 million in the second quarter 2010, compared to \$33.4 million in the second quarter 2009. This decrease was primarily due to higher than expected returns on pension plan assets in 2009 and the benefits resulting from our voluntary pension contributions made over the last several years. For the second quarter 2010, retirement benefit expense of \$16.2 million was included in cost of sales and \$6.2 million was included in selling and administrative expenses. For the second quarter 2009, the amount of retirement benefit expense included in cost of sales was \$23.6 million, and the amount included in selling and administrative expenses was \$9.8 million. Retirement benefit expense decreased to \$44.9 million for the six months ended June 30, 2010, compared to \$70.7 million in the second quarter 2009. For the six months ended June 30, 2010, retirement benefit expense of \$32.0 million was included in cost of sales and \$12.9 million was included in selling and administrative expenses. For the six months ended June 30, 2009, the amount of retirement benefit expense included in cost of sales was \$51.3 million, and the amount included in selling and administrative expenses was \$19.4 million.

Income Taxes

Second quarter 2010 results included a provision for income taxes of \$22.4 million, or 37% of income before tax, compared to an income tax provision of \$11.7 million for the comparable 2009 period. The second quarter 2009 tax provision included a non-recurring tax charge of \$11.5 million, primarily associated with the tax consequences of the June 2009 \$350 million voluntary contribution to the pension plan.

For the first half of 2010, the provision for income taxes was \$35.6 million, or 38% of income before tax, compared to \$6.7 million for the first half 2009. The first half 2010 included a non-recurring tax charge of \$5.3 million associated with the impact of the Patient Protection and Affordable Care Act. This first half 2010 tax charge was partially offset by discrete net tax benefits of \$3.7 million associated with adjustment of taxes paid in prior

Table of Contents

years, the settlement of uncertain income tax positions, and other changes. The 2009 first quarter included discrete adjustments of \$5.1 million associated primarily with prior years' taxes.

Primarily as a result of the \$350 million voluntary pension contribution in June 2009 which was designated to pertain to the 2009 tax year, the Company received a U.S. Federal income tax refund of \$108.5 million in the 2009 second quarter.

Financial Condition and Liquidity

We believe that internally generated funds, current cash on hand, and available borrowings under existing credit lines will be adequate to meet foreseeable liquidity needs, including a substantial expansion of our production capabilities over the next few years. We did not borrow funds under our domestic senior unsecured credit facility during the first six months of 2010. However, as of June 30, 2010 approximately \$7 million of this facility was utilized to support letters of credit.

If we needed to obtain additional financing using the credit markets, the cost and the terms and conditions of such borrowings may be influenced by our credit rating. Changes in our credit rating do not impact our access to, or the cost of, our existing credit facilities.

We have no off-balance sheet arrangements as defined in Item 303(a)(4) of SEC Regulation S-K.

Cash Flow and Working Capital

For the six months ended June 30, 2010, cash used in operating activities was \$193.4 million as an investment of \$346.8 million in managed working capital, primarily due to improving business activity and higher raw material costs, offset increased profitability. Cash used in investing activities was \$96.6 million in the 2010 first half and consisted primarily of capital expenditures. Cash used in financing activities was \$40.1 million in the 2010 first half due primarily to dividend payments of \$35.3 million. At June 30, 2010, cash and cash equivalents on hand totaled \$378.7 million, a decrease of \$330.1 million from year end 2009.

As part of managing the liquidity of our business, we focus on controlling managed working capital, which is defined as gross accounts receivable and gross inventories, less accounts payable. In measuring performance in controlling this managed working capital, we exclude the effects of LIFO inventory valuation reserves, excess and obsolete inventory reserves, and reserves for uncollectible accounts receivable which, due to their nature, are managed separately. At June 30, 2010, managed working capital was 32.8% of annualized sales, compared to 34.5% of annualized sales at December 31, 2009. During the first six months of 2010, managed working capital increased by \$346.8 million, to \$1.4 billion. The increase in managed working capital from December 31, 2009 was due to increased accounts receivable of \$177.3 million and increased inventory of \$226.1 million, partially offset by increased accounts payable of \$56.6 million. While accounts receivable balances increased during the 2010 first half, days sales outstanding, which measures actual collection timing for accounts receivable, remained comparable to year end 2009. Gross inventory turns, which excludes the effect of LIFO inventory valuation reserves, improved 11% compared to year end 2009.

Table of Contents

The Components of managed working capital were as follows:

(in millions)	June 30, 2010	December 31, 2009
Accounts receivable	\$ 569.3	\$ 392.0
Inventory	1,053.0	825.5
Accounts payable	(363.6)	(308.6)
Subtotal	1,258.7	908.9
Allowance for doubtful accounts	6.4	6.5
LIFO reserve	108.3	102.8
Corporate and other	34.6	43.0
Managed working capital	1,408.0	1,061.2
Annualized prior 2 months sales	\$ 4,290.4	\$ 3,076.4
Managed working capital as a % of annualized sales	32.8%	34.5%
Change in managed working capital from December 31, 2009	\$ 346.8	

Capital Expenditures

We have significantly expanded, and continue to expand, our manufacturing capabilities to meet expected intermediate and long-term increased demand from the aerospace (engine and airframe) and defense, chemical process industry, oil and gas, electrical energy, and medical markets, especially for titanium and titanium-based alloys, nickel-based alloys and superalloys, specialty alloys, and exotic alloys. We currently expect capital expenditures for 2010 to be approximately \$325 million, of which \$97.6 million was expended in the first six months of 2010. These self-funded on-going strategic capital investments include:

A new advanced specialty metals hot rolling and processing facility at our existing Brackenridge, PA site. The project is estimated to cost approximately \$1.16 billion and take at least four years to complete. Engineering, permitting and site preparation are nearly completed for the facility. Our new advanced hot-rolling and processing facility is designed to be the most powerful mill in the world for production of specialty metals. It is designed to produce exceptional quality, thinner, and wider hot-rolled coils at reduced cost with shorter lead times, and require lower working capital requirements. When completed, we believe ATI's new advanced specialty metals hot rolling and processing facility will provide unsurpassed manufacturing capability and versatility in the production of a wide range of flat-rolled specialty metals. We expect improved productivity, lower costs, and higher quality for our diversified product mix of flat-rolled specialty metals, including nickel-based and specialty alloys, titanium and titanium alloys, zirconium alloys, Precision Rolled Strip® products, and stainless sheet and coiled plate products. It is designed to roll and process exceptional quality hot bands of up to 78.62 inches, or 2 meters, wide.

In connection with the new advanced specialty metals hot rolling and processing facility, we are consolidating our Natrona, PA grain-oriented electrical steel melt shop into ATI's Brackenridge, PA melt shop. This consolidation is expected to improve the overall productivity of ATI's flat-rolled grain-oriented electrical steel and other stainless and specialty alloys, and reduce the cost of producing slabs and ingots. The investment should also result in significant reduction of particulate emissions. We expect to realize considerable cost

savings from this project beginning in the second half of 2010.

We are increasing our capacity to produce zirconium products through capital expansions of zirconium sponge production and VAR melting. This new zirconium sponge and melting capacity better positions ATI for the current and expected strong growth in demand from the nuclear electrical energy and chemical process industry markets. We believe that ATI is now the world's largest producer of critical reactor grade zirconium sponge for the nuclear energy market.

Debt

At June 30, 2010, we had \$1,070.1 million in total outstanding debt, compared to \$1,071.1 million at December 31, 2009, a decrease of \$1.0 million. The decrease in debt was primarily due to scheduled debt maturity payments.

Table of Contents

During the 2009 second quarter, we issued \$350 million of 9.375% unsecured Senior Notes and \$402.5 million of 4.25% Convertible Senior Notes. The net proceeds of the debt issuances were used to retire \$183.3 million of 8.375% Notes due in 2011 and to make a \$350 million voluntary cash contribution to our U.S. defined benefit pension plan, with the balance used for general corporate purposes.

In managing our overall capital structure, some of the measures on which we focus are net debt to total capitalization, which is the percentage of our debt, net of cash that may be available to reduce borrowings, to our total invested and borrowed capital, and total debt to total capitalization, which excludes cash balances. Net debt as a percentage of total capitalization was 25.2% at June 30, 2010, compared to 15.3% at December 31, 2009. The net debt to total capitalization was determined as follows:

(\$ in millions)	June 30, 2010	December 31, 2009
Total debt	\$ 1,070.1	\$ 1,071.1
Less: Cash	(378.7)	(708.8)
Net debt	\$ 691.4	\$ 362.3
Net debt	\$ 691.4	\$ 362.3
Total ATI stockholders' equity	2,049.4	2,012.2
Net ATI total capital	\$ 2,740.8	\$ 2,374.5
Net debt to ATI total capital	25.2%	15.3%

Total debt to total capitalization decreased to 34.3% at June 30, 2010 from 34.7% December 31, 2009.

Total debt to total capitalization was determined as follows:

(\$ in millions)	June 30, 2010	December 31, 2009
Total debt	\$ 1,070.1	\$ 1,071.1
Total ATI stockholders' equity	2,049.4	2,012.2
Total ATI capital	\$ 3,119.5	\$ 3,083.3
Total debt to total ATI capital	34.3%	34.7%

We did not borrow funds under our \$400 million senior unsecured domestic credit facility during the first six months of 2010, although approximately \$7 million has been utilized to support the issuance of letters of credit. The unsecured facility requires us to maintain a leverage ratio (consolidated total indebtedness net of cash on hand in excess of \$50 million, divided by consolidated earnings before interest, taxes, depreciation and amortization, and non-cash pension expense) of not greater than 3.25, and maintain an interest coverage ratio (consolidated earnings before interest, taxes, and non-cash pension expense divided by interest expense) of not less than 2.0. For the twelve months ended June 30, 2010, our leverage ratio was 1.82, and our interest coverage ratio was 5.40.

We have an additional, separate credit facility for the issuance of letters of credit. As of June 30, 2010, \$32 million in letters of credit was outstanding under this facility.

In addition, STAL, the Company's Chinese joint venture company in which ATI has a 60% interest, has a 205 million renminbi (approximately \$30 million at June 30, 2010 exchange rates) revolving credit facility with a group of banks. This credit facility is supported solely by STAL's financial capability without any guarantees from the joint venture partners. As of June 30, 2010, there were no borrowings under this credit facility.

Retirement Benefits

At December 31, 2009, the measurement date for ERISA funding, our U.S. qualified pension defined benefit pension plan was essentially fully-funded. Based upon current regulations and actuarial studies, we are not required

Table of Contents

to make a cash contribution for 2010. However, we may elect, depending upon investment performance of the pension plan assets and other factors, to make additional voluntary cash contributions to this plan in the future.

Dividends

A regular quarterly dividend of \$0.18 per share of common stock was declared on May 7, 2010, payable on June 17, 2010 to stockholders of record at the close of business on May 27, 2010. The payment of dividends and the amount of such dividends depends upon matters deemed relevant by our Board of Directors, such as our results of operations, financial condition, cash requirements, future prospects, any limitations imposed by law, credit agreements or senior securities, and other factors deemed relevant and appropriate.

Critical Accounting Policies

Inventory

At June 30, 2010, we had net inventory of \$1,053 million. Inventories are stated at the lower of cost (last-in, first-out (LIFO), first-in, first-out (FIFO) and average cost methods) or market, less progress payments. Costs include direct material, direct labor and applicable manufacturing and engineering overhead, and other direct costs. Most of our inventory is valued utilizing the LIFO costing methodology. Inventory of our non-U.S. operations is valued using average cost or FIFO methods. Under the LIFO inventory valuation method, changes in the cost of raw materials and production activities are recognized in cost of sales in the current period even though these material and other costs may have been incurred at significantly different values due to the length of time of our production cycle. The prices for many of the raw materials we use have been extremely volatile during the past four years. Since we value most of our inventory utilizing the LIFO inventory costing methodology, a rise in raw material costs has a negative effect on our operating results, while, conversely, a fall in material costs results in a benefit to operating results. For example, in 2009, 2008 and 2007, the effect of falling raw material costs on our LIFO inventory valuation method resulted in cost of sales which were \$102.8 million, \$169.0 million and \$92.1 million, respectively, lower than would have been recognized had we utilized the FIFO methodology to value our inventory. However, in 2006 the effect of increases in raw material costs on our LIFO inventory valuation method resulted in cost of sales which were \$197.0 million higher than would have been recognized if we utilized the FIFO methodology to value our inventory. In a period of rising prices, cost of sales expense recognized under LIFO is generally higher than the cash costs incurred to acquire the inventory sold. Conversely, in a period of declining raw material prices, cost of sales recognized under LIFO is generally lower than cash costs incurred to acquire the inventory sold.

Since the LIFO inventory valuation methodology is designed for annual determination, interim estimates of the annual LIFO valuation are required. We recognize the effects of the LIFO inventory valuation method on an interim basis by projecting the expected annual LIFO cost and allocating that projection to the interim quarters equally. These projections of annual LIFO inventory valuation reserve changes are updated quarterly and are evaluated based upon material, labor and overhead costs and projections for such costs at the end of the year plus projections regarding year-end inventory levels. Operating results for the three and six months ended June 30, 2010 included a LIFO inventory valuation reserve charge of \$5.5 million.

The LIFO inventory valuation methodology is not utilized by many of the companies with which we compete, including foreign competitors. As such, our results of operations may not be comparable to those of our competitors during periods of volatile material costs due, in part, to the differences between the LIFO inventory valuation method and other acceptable inventory valuation methods.

We evaluate product lines on a quarterly basis to identify inventory values that exceed estimated net realizable value. The calculation of a resulting reserve, if any, is recognized as an expense in the period that the need for the reserve is identified. At June 30, 2010, no significant reserves were required. It is our general policy to write-down to scrap value any inventory that is identified as obsolete and any inventory that has aged or has not moved in more than twelve months. In some instances this criterion is up to twenty-four months due to the longer manufacturing and distribution process for such products.

Other Critical Accounting Policies

A summary of other significant accounting policies is discussed in Management's Discussion and Analysis of Financial Condition and Results of Operations and in Note 1 to the consolidated financial statements contained in our Annual Report on Form 10-K for the year ended December 31, 2009.

Table of Contents

The preparation of the financial statements in accordance with U.S. generally accepted accounting principles requires us to make judgments, estimates and assumptions regarding uncertainties that affect the reported amounts of assets and liabilities. Significant areas of uncertainty that require judgments, estimates and assumptions include the accounting for derivatives, retirement plans, income taxes, environmental and other contingencies as well as asset impairment, inventory valuation and collectibility of accounts receivable. We use historical and other information that we consider to be relevant to make these judgments and estimates. However, actual results may differ from those estimates and assumptions that are used to prepare our financial statements.

New Accounting Pronouncements Adopted

In January 2010, the FASB issued changes to disclosure requirements for fair value measurements, including the amount of transfers between Level 1 and 2 of the fair value hierarchy, the reasons for transfers in or out of Level 3 of the fair value hierarchy and activity for recurring Level 3 measures. In addition, the changes clarify certain disclosure requirements related to the level at which fair value disclosures should be disaggregated with separate disclosures of purchases, sales, issuances and settlements, and the requirement to provide disclosures about valuation techniques and inputs used in determining the fair value of assets or liabilities classified as Levels 2 or 3. We adopted the disclosure changes effective January 1, 2010, except for the disaggregated Level 3 rollforward disclosures, which will be effective for fiscal year 2011.

Forward-Looking and Other Statements

From time to time, we have made and may continue to make forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Certain statements in this report relate to future events and expectations and, as such, constitute forward-looking statements. Forward-looking statements include those containing such words as anticipates, believes, estimates, expects, would, should, will, will likely result, outlook, projects, and similar expressions. Forward-looking statements are based on management's current expectations and include known and unknown risks, uncertainties and other factors, many of which we are unable to predict or control, that may cause our actual results, performance or achievements to materially differ from those expressed or implied in the forward-looking statements. Important factors that could cause actual results to differ materially from those in the forward-looking statements include: (a) material adverse changes in economic or industry conditions generally, and global supply and demand conditions and prices for our specialty metals; (b) material adverse changes in the markets we serve, including the aerospace and defense, electrical energy, chemical process industry, oil and gas, medical, automotive, construction and mining and other markets; (c) our inability to achieve the level of cost savings, productivity improvements, synergies, growth or other benefits anticipated by management, including those anticipated from strategic investments, whether due to significant increases in energy, raw materials or employee benefits costs, the possibility of project cost overruns or unanticipated costs and expenses, or other factors; (d) volatility of prices and availability of supply of the raw materials that are critical to the manufacture of our products; (e) declines in the value of our defined benefit pension plan assets or unfavorable changes in laws or regulations that govern pension plan funding; (f) significant legal proceedings or investigations adverse to us; and (g) other risk factors summarized in our Annual Report on Form 10-K for the year ended December 31, 2009, and in other reports filed with the Securities and Exchange Commission. We assume no duty to update our forward-looking statements.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

As part of our risk management strategy, we utilize derivative financial instruments, from time to time, to hedge our exposure to changes in raw material prices, energy prices, foreign currencies, and interest rates. We monitor the third-party financial institutions which are our counterparty to these financial instruments on a daily basis and diversify our transactions among counterparties to minimize exposure to any one of these entities. Fair values for derivatives were measured using exchange-traded prices for the hedged items including consideration of counterparty risk and the Company's credit risk.

Interest Rate Risk. We attempt to maintain a reasonable balance between fixed- and floating-rate debt to keep financing costs as low as possible. At June 30, 2010, we had approximately \$42 million of floating rate debt outstanding with a weighted average interest rate of approximately 1.6%. Approximately \$15 million of this floating rate debt is capped at a 6% maximum interest rate. Since the interest rate on floating rate debt changes with the

short-term market rate of interest, we are exposed to the risk that these interest rates may increase, raising our interest expense in situations where the interest rate is not capped. For example, a hypothetical 1% increase in the

30

Table of Contents

rate of interest on the \$27 million of our outstanding floating rate debt not subjected to a cap would result in increased annual financing costs of approximately \$0.3 million.

Volatility of Energy Prices. Energy resources markets are subject to conditions that create uncertainty in the prices and availability of energy resources. The prices for and availability of electricity, natural gas, oil and other energy resources are subject to volatile market conditions. These market conditions often are affected by political and economic factors beyond our control. Increases in energy costs, or changes in costs relative to energy costs paid by competitors, have and may continue to adversely affect our profitability. To the extent that these uncertainties cause suppliers and customers to be more cost sensitive, increased energy prices may have an adverse effect on our results of operations and financial condition. We use approximately 8 to 10 million MMBtu s of natural gas annually, depending upon business conditions, in the manufacture of our products. These purchases of natural gas expose us to risk of higher gas prices. For example, a hypothetical \$1.00 per MMBtu increase in the price of natural gas would result in increased annual energy costs of approximately \$8 to \$10 million. We use several approaches to minimize any material adverse effect on our financial condition or results of operations from volatile energy prices. These approaches include incorporating an energy surcharge on many of our products and using financial derivatives to reduce exposure to energy price volatility.

At June 30, 2010, the outstanding financial derivatives used to hedge our exposure to energy cost volatility included both natural gas and electricity hedges. For natural gas, approximately 50% of our forecasted domestic requirements are hedged through 2011, and about 15% of our domestic requirements are hedged for 2012. The net mark-to-market valuation of these outstanding natural gas hedges at June 30, 2010 was an unrealized pre-tax loss of \$20.2 million, of which \$14.4 million was presented in accrued liabilities on the balance sheet, \$6.0 million presented in other long-term liabilities, and \$0.2 million as assets. For the three months ended June 30, 2010, the effects of natural gas hedging activity increased cost of sales by \$4.7 million. For electricity usage in our Western Pennsylvania operations, we have hedged approximately 40% of our on-peak and off-peak forecasted requirements for 2011 and approximately 20% for 2012. The net mark-to-market valuation of the electricity hedges was an unrealized pre-tax loss of \$0.8 million, of which \$0.4 million is presented in accrued liabilities on the balance sheet, \$0.7 million presented in other long-term liabilities, and \$0.3 million as assets. The effects of the hedging activity will be recognized in income over the designated hedge periods.

Volatility of Raw Material Prices. We use raw materials surcharge and index mechanisms to offset the impact of increased raw material costs; however, competitive factors in the marketplace can limit our ability to institute such mechanisms, and there can be a delay between the increase in the price of raw materials and the realization of the benefit of such mechanisms. For example, in 2009 we used approximately 60 million pounds of nickel; therefore a hypothetical change of \$1.00 per pound in nickel prices would result in increased costs of approximately \$60 million. In addition, in 2009 we also used approximately 600 million pounds of ferrous scrap in the production of our flat-rolled products and a hypothetical change of \$0.01 per pound would result in increased costs of approximately \$6 million. While we enter into raw materials futures contracts from time-to-time to hedge exposure to price fluctuations, such as for nickel, we cannot be certain that our hedge position adequately reduces exposure. We believe that we have adequate controls to monitor these contracts, but we may not be able to accurately assess exposure to price volatility in the markets for critical raw materials.

The majority of our products are sold utilizing raw material surcharges and index mechanisms. However as of June 30, 2010, we had entered into financial hedging arrangements primarily at the request of our customers related to firm orders for approximately 5% of our total annual nickel requirements through 2010. A minor amount of nickel hedges extend into 2014. Any gain or loss associated with these hedging arrangements is included in cost of sales. At June 30, 2010, the net mark-to-market valuation of our outstanding raw material hedges was an unrealized pre-tax gain of \$6.5 million, comprised of \$7.0 million included in prepaid expenses and other current assets, \$0.2 million in other long-term assets, and \$0.7 million in accrued liabilities on the balance sheet.

Foreign Currency Risk. Foreign currency exchange contracts are used, from time-to-time, to limit transactional exposure to changes in currency exchange rates. We sometimes purchase foreign currency forward contracts that permit us to sell specified amounts of foreign currencies expected to be received from our export sales for pre-established U.S. dollar amounts at specified dates. The forward contracts are denominated in the same foreign

currencies in which export sales are denominated. These contracts are designated as hedges of the variability in cash flows of a portion of the forecasted future export sales transactions which otherwise would expose the Company to foreign currency risk. We may also enter into foreign currency forward contracts that are not designated as hedges, which are denominated in the same foreign currency in which export sales are denominated. At June 30, 2010, the outstanding financial derivatives, including both hedges and undesignated derivatives, that are used to manage our

Table of Contents

exposure to foreign currency, primarily euros, represented approximately 20% of our forecasted total international sales through 2011. In addition, we may also designate cash balances held in foreign currencies as hedges of forecasted foreign currency transactions. At June 30, 2010, the net mark-to-market valuation of the outstanding foreign currency forward contracts was an unrealized pre-tax gain of \$40.3 million, of which \$30.1 million is included in prepaid expenses and other current assets, \$10.8 million in other long-term assets, \$0.4 million in accrued liabilities, and \$0.2 million in other long-term liabilities on the balance sheet.

Item 4. Controls and Procedures**(a) Evaluation of Disclosure Controls and Procedures**

Our Chief Executive Officer and Principal Financial Officer have evaluated the Company's disclosure controls and procedures (as defined in Rule 13a-15(e) or Rule 15d-15(e) under the Securities Exchange Act of 1934, as amended) as of June 30, 2010, and they concluded that these disclosure controls and procedures are effective.

(b) Changes in Internal Controls

There was no change in our internal control over financial reporting identified in connection with the evaluation of the Company's disclosure controls and procedures (as defined in Rule 13a-15(e) or Rule 15d-15(e) under the Securities Exchange Act of 1934, as amended) as of June 30, 2010, conducted by our Chief Executive Officer and Principal Financial Officer, that occurred during the quarter ended June 30, 2010 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION**Item 1. Legal Proceedings**

In November 2007, the EPA sent a subsidiary of the Company a Notice of Violation (NOV) alleging that the company's Natrona, PA facility is operating in violation of the Clean Air Act. The notice invited the company to meet with the EPA to discuss a resolution of the NOV. The Company and the EPA resolved the allegations by entering into a Consent Decree that was approved by the United States District Court for the Western District of Pennsylvania on July 2, 2010. Pursuant to the terms of the Consent Decree, the Company paid a civil penalty of \$800,000 to the EPA and \$800,000 to the Allegheny County Health Department. In addition, the Company agreed to close its Natrona, PA melt shop prior to November 30, 2010, which is part of its previously announced plans to consolidate the Natrona operations with its Brackenridge facility.

A number of lawsuits, claims and proceedings have been or may be asserted against the Company relating to the conduct of its business, including those pertaining to product liability, patent infringement, commercial, government contract work, employment, employee benefits, taxes, environmental, health and safety, occupational disease, and stockholder matters. Certain of such lawsuits, claims and proceedings are described in our Annual Report on Form 10-K for the year ended December 31, 2009, and addressed in Note 12 to the unaudited interim financial statements included herein. While the outcome of litigation cannot be predicted with certainty, and some of these lawsuits, claims or proceedings may be determined adversely to the Company, management does not believe that the disposition of any such pending matters is likely to have a material adverse effect on the Company's financial condition or liquidity, although the resolution in any reporting period of one or more of these matters could have a material adverse effect on the Company's results of operations for that period.

Item 1A. Risk Factors

In addition to the other information set forth in this report, you should carefully consider the factors discussed in Part I, Item 1A. Risk Factors in our Annual Report on Form 10-K for the year ended December 31, 2009, which could materially affect our business, financial condition or future results. The risks described in our Annual Report on Form 10-K are not the only risks facing our Company. Additional risks and uncertainties not currently known to us or that we currently deem to be immaterial also may materially adversely affect our business, financial condition and/or operating results.
