TEXAS CAPITAL BANCSHARES, INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS UNAUDITED
(1) OPERATIONS AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Nature of Operations

Texas Capital Bancshares, Inc. (the Company), a Delaware bank holding company, was incorporated in November 1996 and commenced operations in March 1998. The consolidated financial statements of the Company include the accounts of Texas Capital Bancshares, Inc. and its wholly owned subsidiary, Texas Capital Bank, National Association (the Bank). The Bank currently provides commercial banking services to its customers primarily in Texas and concentrates on middle market commercial and high net worth customers.

Basis of Presentation

The accounting and reporting policies of Texas Capital Bancshares, Inc. conform to accounting principles generally accepted in the United States and to generally accepted practices within the banking industry. Our consolidated financial statements include the accounts of Texas Capital Bancshares, Inc. and its subsidiary, the Bank. Certain prior period balances have been reclassified to conform to the current period presentation.

The consolidated interim financial statements have been prepared without audit. Certain information and footnote disclosures presented in accordance with accounting principles generally accepted in the United States have been condensed or omitted. In the opinion of management, the interim financial statements include all normal and recurring adjustments and the disclosures made are adequate to make interim financial information not misleading. The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States (GAAP) for interim financial information and with the instructions to Form 10-Q adopted by the Securities and Exchange Commission (SEC). Accordingly, the financial statements do not include all of the information and footnotes required by GAAP for complete financial statements and should be read in conjunction with our consolidated financial statements, and notes thereto, for the year ended December 31, 2010, included in our Annual Report on Form 10-K filed with the SEC on February 23, 2011 (the 2010 Form 10-K). Operating results for the interim periods disclosed herein are not necessarily indicative of the results that may be expected for a full year or any future period.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements. Actual results could differ from those estimates. The allowance for possible loan losses, the valuation allowance for other real estate owned (OREO), the fair value of stock-based compensation awards, the fair values of financial instruments and the status of contingencies are particularly susceptible to significant change in the near term.

Accumulated Other Comprehensive Income, Net

Unrealized gains or losses on our available-for-sale securities (after applicable income tax expense or benefit) are included in accumulated other comprehensive income, net. Accumulated comprehensive income, net for the three months ended March 31, 2011 and 2010 is reported in the accompanying consolidated statements of changes in stockholders equity.

Fair Values of Financial Instruments

Fair values of financial instruments are estimated using relevant market information and other assumptions. Fair value estimates involve uncertainties and matters of significant judgment regarding interest rates, credit risk, prepayments and other factors, especially in the absence of broad markets for particular items. Changes in assumptions or in market conditions could significantly affect the estimates. The fair value estimates of existing on- and off-balance sheet financial instruments do not include the value of anticipated future business or the value of assets and liabilities not considered financial instruments.

Table of Contents

(2) EARNINGS PER COMMON SHARE

The following table presents the computation of basic and diluted earnings per share (in thousands except per share data):

	Three months ended March 31, 2011	2010
Numerator:		
Net income from continuing operations	$ 11,939	$ 7,600
Loss from discontinued operations	(60)	(55)
Net income	$ 11,879	$ 7,545
Denominator:		
Denominator for basic earnings per share weighted average shares	37,090,882	36,191,373
Effect of employee stock options[1]	957,779	509,935
Effect of warrants to purchase common stock	293,018	82,411
Denominator for dilutive earnings per share adjusted weighted average shares and assumed conversions	38,341,679	36,783,719
Basic earnings per common share from continuing operations	$ 0.32	$ 0.21
Basic earnings per common share from discontinued operations		
Basic earnings per common share	$ 0.32	$ 0.21
Diluted earnings per share from continuing operations	$ 0.31	$ 0.21
Diluted earnings per share from discontinued operations		
Diluted earnings per common share	$ 0.31	$ 0.21

(1) Stock options, SARs and RSUs outstanding of 116,000 at March 31, 2011 and 1,601,380 at March 31, 2010 have not been included in diluted earnings per share because to do so would have been anti-dilutive for the periods presented.

(3) SECURITIES

Securities are identified as either held-to-maturity or available-for-sale based upon various factors, including asset/liability management strategies, liquidity and profitability objectives, and regulatory requirements. Held-to-maturity securities are carried at cost, adjusted for amortization of premiums or accretion of discounts. Available-for-sale securities are securities that may be sold prior to maturity based upon asset/liability management decisions. Securities identified as available-for-sale are carried at fair value. Unrealized gains or losses on available-for-sale securities are recorded as accumulated other comprehensive income in stockholders equity, net of taxes. Amortization of premiums or accretion of discounts on mortgage-backed securities is periodically adjusted for estimated prepayments. Realized gains and losses and declines in value judged to be other-than-temporary are included in gain (loss) on sale of securities. The cost of securities sold is based on the specific identification method. Our net unrealized gain on the available-for-sale securities portfolio value decreased from a gain of $8.2 million, which represented 4.65% of the amortized cost at December 31, 2010, to a gain of $8.0 million, which represented 4.87% of the amortized cost at March 31, 2011.

The following is a summary of securities (in thousands):

	March 31, 2011			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value
Available-for-Sale Securities:				
Residential mortgage-backed securities	$ 115,270	$ 6,665	$ (22)	$ 121,913
Corporate securities	5,000			5,000
Municipals	36,221	1,305		37,526
Equity securities[1]	7,506	45		7,551
	$ 163,997	$ 8,015	$ (22)	$ 171,990

	December 31, 2010			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value
Available-for-Sale Securities:				
Residential mortgage-backed securities	$ 126,838	$ 6,891	$ (5)	$ 133,724
Corporate securities	5,000			5,000
Municipals	37,841	1,244		39,085
Equity securities[1]	7,506	109		7,615
	$ 177,185	$ 8,244	$ (5)	$ 185,424

(1) Equity securities consist of Community Reinvestment Act funds.

The amortized cost and estimated fair value of securities are presented below by contractual maturity (in thousands, except percentage data):

	March 31, 2011				
	Less Than One Year	After One Through Five Years	After Five Through Ten Years	After Ten Years	Total
Available-for-sale:					
Residential mortgage-backed securities:[1]					
Amortized cost	$ 6,968	$ 10,717	$ 45,832	$ 51,753	$ 115,270
Estimated fair value	6,996	11,070	48,802	55,045	121,913
Weighted average yield[3]	4.502%	4.351%	4.814%	4.021%	4.396%
Corporate securities:					
Amortized cost		5,000			5,000

Estimated fair value		5,000			5,000
Weighted average yield[3]		7.375%			7.375%
Municipals:[2]					
Amortized cost	2,751	24,702	8,768		36,221
Estimated fair value	2,789	25,710	9,027		37,526
Weighted average yield[3]	5.082%	5.476%	5.836%		5.506%
Equity securities:					
Amortized cost	7,506				7,506
Estimated fair value	7,551				7,551
Total available-for-sale securities:					
Amortized cost					$ 163,997
Estimated fair value					$ 171,990

(1) Actual maturities may differ from contractual maturities because borrowers may have the right to call or prepay obligations with or without prepayment penalties.

(2) Yields have been adjusted to a tax equivalent basis assuming a 35% federal tax rate.

(3) Yields are calculated based on amortized cost.

Securities with carrying values of approximately $38.9 million were pledged to secure certain borrowings and deposits at March 31, 2011. Of the pledged securities at March 31, 2011, approximately $19.2 million were pledged for certain deposits, and approximately $19.7 million were pledged for repurchase agreements.
The following table discloses, as of March 31, 2011 and December 31, 2010, our investment securities that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 or more months (in thousands):
March 31, 2011

	Less Than 12 Months		12 Months or Longer		Total	
	Fair Value	Unrealized Loss	Fair Value	Unrealized Loss	Fair Value	Unrealized Loss
Mortgage-backed securities	$ 3,180	$ (22)	$	$	$ 3,180	$ (22)
Corporate securities						
Municipals						
	$ 3,180	$ (22)	$	$	$ 3,180	$ (22)

December 31, 2010

	Less Than 12 Months		12 Months or Longer		Total	
	Fair Value	Unrealized Loss	Fair Value	Unrealized Loss	Fair Value	Unrealized Loss
Mortgage-backed securities	$ 3,681	$ (5)	$	$	$ 3,681	$ (5)
Corporate securities						
Municipals						
	$ 3,681	$ (5)		$	$ 3,681	$ (5)

At March 31, 2011, we had one investment position in an unrealized loss position. We do not believe these unrealized losses are other than temporary as (1) we do not have the intent to sell any of the securities in the table above; and (2) it is not probable that we will be unable to collect the amounts contractually due. The unrealized losses are interest rate related, and losses have decreased as rates have decreased in 2009 and remained low during 2010 and 2011. We have not identified any issues related to the ultimate repayment of principal as a result of credit concerns on these securities.

(4) LOANS AND ALLOWANCE FOR LOAN LOSSES

At March 31, 2011 and December 31, 2010, loans were as follows (in thousands):

	March 31, 2011	December 31, 2010
Commercial	$ 2,541,784	$ 2,592,924
Construction	349,442	270,008
Real estate	1,746,100	1,759,758
Consumer	21,590	21,470
Leases	80,694	95,607
Gross loans held for investment	4,739,610	4,739,767

Deferred income (net of direct origination costs)	(28,186)	(28,437)
Allowance for loan losses	(70,248)	(71,510)
Total loans held for investment, net	4,641,176	4,639,820
Loans held for sale	811,400	1,194,209
Total	$ 5,452,576	$ 5,834,029

We continue to lend primarily in Texas. As of March 31, 2011, a substantial majority of the principal amount of the loans held for investment in our portfolio was to businesses and individuals in Texas. This geographic

10

concentration subjects the loan portfolio to the general economic conditions within this area. The risks created by this concentration have been considered by management in the determination of the adequacy of the allowance for loan losses. Management believes the allowance for loan losses is adequate to cover estimated losses on loans at each balance sheet date.

The reserve for loan losses is comprised of specific reserves for impaired loans and an estimate of losses inherent in the portfolio at the balance sheet date, but not yet identified with specified loans. We regularly evaluate our reserve for loan losses to maintain an adequate level to absorb estimated loan losses inherent in the loan portfolio. Factors contributing to the determination of reserves include the credit worthiness of the borrower, changes in the value of pledged collateral, and general economic conditions. All loan commitments rated substandard or worse and greater than $500,000 are specifically reviewed for loss potential. For loans deemed to be impaired, a specific allocation is assigned based on the losses expected to be realized from those loans. For purposes of determining the general reserve, the portfolio is segregated by product types to recognize differing risk profiles among categories, and then further segregated by credit grades. Credit grades are assigned to all loans. Each credit grade is assigned a risk factor, or reserve allocation percentage. These risk factors are multiplied by the outstanding principal balance and risk-weighted by product type to calculate the required reserve. A similar process is employed to calculate a reserve assigned to off-balance sheet commitments, specifically unfunded loan commitments and letters of credit, and any needed reserve is recorded in other liabilities. Even though portions of the allowance may be allocated to specific loans, the entire allowance is available for any credit that, in management s judgment, should be charged off.

We have several pass credit grades that are assigned to loans based on varying levels of risk, ranging from credits that are secured by cash or marketable securities, to watch credits which have all the characteristics of an acceptable credit risk but warrant more than the normal level of supervision. Within our criticized/classified credit grades are special mention, substandard, and doubtful. Special mention loans are those that are currently protected by sound worth and paying capacity of the borrower, but that are potentially weak and constitute an additional credit risk. The loan has the potential to deteriorate to a substandard grade due to the existence of financial or administrative deficiencies. Substandard loans are inadequately protected by sound worth and paying capacity of the borrower and of the collateral pledged. Substandard loans have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that we will sustain some loss if the deficiencies are not corrected. Substandard loans can be accruing or can be on nonaccrual depending on the circumstances of the individual loans. Loans classified as doubtful have all the weaknesses inherent in substandard loans with the added characteristics that the weaknesses make collection or liquidation in full highly questionable and improbable. The possibility of loss is extremely high. All doubtful loans are on nonaccrual.

The reserve allocation percentages assigned to each credit grade have been developed based primarily on an analysis of our historical loss rates. The allocations are adjusted for certain qualitative factors for such things as general economic conditions, changes in credit policies and lending standards. Historical loss rates are adjusted to account for current environmental conditions which we believe are likely to cause loss rates to be higher or lower than past experience. Each quarter we produce an adjustment range for environmental factors unique to us and our market. Changes in the trend and severity of problem loans can cause the estimation of losses to differ from past experience. In addition, the reserve considers the results of reviews performed by independent third party reviewers as reflected in their confirmations of assigned credit grades within the portfolio. The portion of the allowance that is not derived by the allowance allocation percentages compensates for the uncertainty and complexity in estimating loan and lease losses including factors and conditions that may not be fully reflected in the determination and application of the allowance allocation percentages. We evaluate many factors and conditions in determining the unallocated portion of the allowance, including the economic and business conditions affecting key lending areas, credit quality trends and general growth in the portfolio. The allowance is considered adequate and appropriate, given management s assessment of potential losses within the portfolio as of the evaluation date, the significant growth in the loan and lease portfolio, current economic conditions in the Company s market areas and other factors.

The methodology used in the periodic review of reserve adequacy, which is performed at least quarterly, is designed to be dynamic and responsive to changes in portfolio credit quality. The changes are reflected in the general reserve and in specific reserves as the collectability of larger classified loans is evaluated with new information. As our

portfolio has matured, historical loss ratios have been closely monitored, and our reserve adequacy relies primarily on our loss history. Currently, the review of reserve adequacy is performed by executive management and presented to our board of directors for their review, consideration and ratification on a quarterly basis.

The following tables summarize the credit risk profile of our loan portfolio by internally assigned grades and nonaccrual status as of March 31, 2011 and December 31, 2010 (in thousands):
March 31, 2011

	Commercial	Construction	Real Estate	Consumer	Leases	Total
Grade:						
Pass	$ 2,414,750	$ 316,077	$ 1,563,548	$ 20,703	$ 63,879	$ 4,378,957
Special mention	59,076	24,286	46,974	139	5,946	136,421
Substandard-accruing	24,965	6,439	69,403	80	6,866	107,753
Non-accrual	42,993	2,640	66,174	669	4,003	116,479
Total loans held for investment	$ 2,541,784	$ 349,442	$ 1,746,099	$ 21,591	$ 80,694	$ 4,739,610

December 31, 2010

	Commercial	Construction	Real Estate	Consumer	Leases	Total
Grade:						
Pass	$ 2,461,769	$ 243,843	$ 1,549,400	$ 20,312	$ 78,715	$ 4,354,039

Non-accrual	42,543	21	62,497	706	6,323	112,090
Total loans held for investment	$ 2,592,924	$ 270,008	$ 1,759,758	$ 21,470	$ 95,607	$ 4,739,767

The following table details activity in the reserve for loan losses by portfolio segment for the quarter ended March 31, 2011. Allocation of a portion of the reserve to one category of loans does not preclude its availability to absorb losses in other categories.

(in thousands)	Commercial	Construction	Real Estate	Consumer	Leases	Unallocated	Total
Beginning balance	$ 15,918	$ 7,336	$ 38,049	$ 306	$ 5,405	$ 4,496	$ 71,510
Provision for possible loan losses	99	(757)	6,594	(42)	(936)	2,732	7,690
Charge-offs	1,993		7,364	34	532		9,923
Recoveries	546	243	31	1	150		971
Net charge-offs	1,447	(243)	7,333	33	382		8,952
Ending balance	$ 14,570	$ 6,822	$ 37,310	$ 231	$ 4,087	$ 7,228	$ 70,248
Period end amount allocated to:							
	$ 5,891	$ 425	$ 10,980	$ 216	$ 816	$	$ 18,328

Loans individually evaluated for impairment							
Loans collectively evaluated for impairment							
Ending balance	$ 5,891	$ 425	$ 10,980	$ 216	$ 816	$	$ 18,328

Activity in the reserve for loan losses during the three months ended March 31, 2010 was as follows (in thousands):

Balance at the beginning of the period	$ 67,931
Provision for loan losses	13,054
Net charge-offs:	
Loans charged-off	9,331
Recoveries	51
Net charge-offs	9,280
Balance at the end of the period	$ 71,705

Table of Contents

Generally we place loans on non-accrual when there is a clear indication that the borrower s cash flow may not be sufficient to meet payments as they become due, which is generally when a loan is 90 days past due. The table below summarizes our non-accrual loans by type and purpose as of March 31, 2011 (in thousands):

Commercial	
Business loans	$ 22,992
Energy	20,001
Construction	
Market risk	2,640
Real estate	
Market risk	56,887
Commercial	6,733
Secured by 1-4 family	2,554
Consumer	669
Leases	4,003
Total non-accrual loans	$ 116,479

A loan held for investment is considered impaired when, based on current information and events, it is probable that we will be unable to collect all amounts due (both principal and interest) according to the terms of the loan agreement. The following table details our impaired loans, by portfolio class as of March 31, 2011 (in thousands):

	Recorded Investment	Unpaid Principal Balance	Related Allowance	Average Recorded Investment	Interest Income Recognized
With no related allowance recorded:					
Commercial

Commercial	1,559	668		2,227	296,978	299,205	
Secured by 1-4 family	7,793	137	34	7,964	73,360	81,324	34
Consumer	267	18		285	20,636	20,921	
Leases	1,423	123		1,546	75,145	76,691	
Total loans held for investment	$ 41,351	$ 6,719	$ 2,529	$ 50,599	$ 4,572,532	$ 4,623,131	$ 2,529

(1) Loans past due 90 days and still accruing includes premium finance loans of $2.4 million. These loans are generally secured by obligations of insurance carriers to refund premiums on cancelled insurance policies. The refund of premiums from the insurance carriers can take 180 days or longer from the cancellation date.

(5) OREO AND VALUATION ALLOWANCE FOR LOSSES ON OREO

The table below presents a summary of the activity related to OREO (in thousands):

	Three months ended March 31, 2011	2010
Beginning balance	$ 42,261	$ 27,264
Additions	926	4,151
Sales	(13,695)	(601)
Valuation allowance for OREO	(1,921)	(1,838)
Direct write-downs	(1,399)	(111)
Ending balance	$ 26,172	$ 28,865

(6) FINANCIAL INSTRUMENTS WITH OFF-BALANCE SHEET RISK

The Bank is a party to financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of its customers. These financial instruments include commitments to extend credit and standby letters of credit which involve varying degrees of credit risk in excess of the amount recognized in the consolidated balance sheets. The Bank s exposure to credit loss in the event of non-performance by the other party to the financial instrument for commitments to extend credit and standby letters of credit is represented by the contractual amount of these instruments. The Bank uses the same credit policies in making commitments and conditional obligations as it does for on-balance sheet instruments. The amount of collateral obtained, if deemed necessary, is based on management s credit evaluation of the borrower.

Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Commitments generally have fixed expiration dates or other termination

clauses and may require payment of a fee. Since many of the commitments may expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements. The Bank evaluates each customer s credit-worthiness on a case-by-case basis.

Standby letters of credit are conditional commitments issued by the Bank to guarantee the performance of a customer to a third party. Those guarantees are primarily issued to support public and private borrowing arrangements. The credit risk involved in issuing letters of credit is essentially the same as that involved in extending loan facilities to customers.

The table below summarizes our financial instruments whose contract amounts represent credit risk at March 31, 2011 (in thousands):

Commitments to extend credit	$ 1,436,490
Standby letters of credit	103,075

(7) REGULATORY MATTERS

The Company and the Bank are subject to various regulatory capital requirements administered by the federal banking agencies. Failure to meet minimum capital requirements can initiate certain mandatory (and possibly additional discretionary) actions by regulators that, if undertaken, could have a direct material effect on the Company s and the Bank s financial statements. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Company and the Bank must meet specific capital guidelines that involve quantitative measures of the Company s and the Bank s assets, liabilities, and certain off-balance sheet items as calculated under regulatory accounting practices. The Company s and the Bank s capital amounts and classification are also subject to qualitative judgments by the regulators about components, risk weightings and other factors.

Quantitative measures established by regulation to ensure capital adequacy require the Company and the Bank to maintain minimum amounts and ratios (set forth in the table below) of total and Tier I capital (as defined in the regulations) to risk-weighted assets (as defined), and of Tier I capital (as defined) to average assets (as defined). Management believes, as of March 31, 2011, that the Company and the Bank meet all capital adequacy requirements to which they are subject.

Financial institutions are categorized as well capitalized or adequately capitalized, based on minimum total risk-based, Tier I risk-based and Tier I leverage ratios as set forth in the tables below. As shown below, the Bank s capital ratios exceed the regulatory definition of well capitalized as of March 31, 2011 and 2010. As of June 30, 2010, the most recent notification from the OCC categorized the Bank as well capitalized under the regulatory framework for prompt corrective action. There have been no conditions or events since the notification that management believes have changed the Bank s category. Based upon the information in its most recently filed call report, the Bank continues to meet the capital ratios necessary to be well capitalized under the regulatory framework for prompt corrective action and continues to meet the capital ratios necessary to be well capitalized under the regulatory framework for prompt corrective action.

	March 31,	
	2011	2010
Risk-based capital:		
Tier 1 capital	11.21%	11.28%
Total capital	12.46%	12.53%
Leverage	10.29%	10.98%

(8) STOCK-BASED COMPENSATION

The fair value of our stock option and stock appreciation right (SAR) grants are estimated at the date of grant using the Black-Scholes option pricing model. The Black-Scholes option valuation model was developed for use in estimating the fair value of traded options which have no vesting restrictions and are fully transferable. In addition, option valuation models require the input of highly subjective assumptions including the expected stock price volatility. Because our employee stock options have characteristics significantly different from those of traded

options, and because changes in the subjective input assumptions can materially affect the fair

value estimate, in management s opinion, the existing models do not necessarily provide the best single measure of the fair value of its employee stock options.

Stock-based compensation consists of options issued prior to the adoption of Accounting Standards Codification (ASC) 718, *Compensation Stock Compensation* (ASC 718), SARs and restricted stock units (RSUs). The SARs and RSUs were granted from 2006 through 2010.

(in thousands)	Three months ended March 31, 2011	2010
Stock- based compensation expense recognized:		
Unvested options	$	$ 110
SARs	506	478
RSUs	1,628	984
Total compensation expense recognized	$ 2,134	$ 1,572

	March 31, 2011 Options	SARs and RSUs
Unrecognized compensation expense related to unvested awards	$	$ 14,220
Weighted average period over which expense is expected to be recognized, in years		2.22

(9) DISCONTINUED OPERATIONS

Subsequent to the end of the first quarter of 2007, we and the purchaser of our residential mortgage loan division (RML) agreed to terminate and settle the contractual arrangements related to the sale of the division, which had been completed as of the end of the third quarter of 2006. Historical operating results of RML are reflected as discontinued operations in the financial statements.

During the three months ended March 31, 2011 and 2010, the loss from discontinued operations was $60,000 and $55,000, net of taxes, respectively. The 2011 and 2010 losses are primarily related to continuing legal and salary expenses incurred in dealing with the remaining loans and requests from investors related to the repurchase of previously sold loans. We still have approximately $488,000 in loans held for sale from discontinued operations that are carried at the estimated market value at quarter-end, which is less than the original cost. We plan to sell these loans, but timing and price to be realized cannot be determined at this time due to market conditions. In addition, we continue to address requests from investors related to repurchasing loans previously sold. While the balances as of March 31, 2011 include a liability for exposure to additional contingencies, including risk of having to repurchase loans previously sold, we recognize that market conditions may result in additional exposure to loss and the extension of time necessary to complete the discontinued mortgage operation.

(10) FAIR VALUE DISCLOSURES

ASC 820, *Fair Value Measurements and Disclosures* (ASC 820), defines fair value, establishes a framework for measuring fair value under GAAP and enhances disclosures about fair value measurements. Fair value is defined under ASC 820 as the price that would be received for an asset or paid to transfer a liability (an exit price) in the principal market for the asset or liability in an orderly transaction between market participants on the measurement date. The adoption of ASC 820 did not have an impact on our financial statements except for the expanded disclosures noted below.

We determine the fair market values of our financial instruments based on the fair value hierarchy. The standard describes three levels of inputs that may be used to measure fair value as provided below.

Level 1 Quoted prices in active markets for identical assets or liabilities. Level 1 assets include U.S. Treasuries that are highly liquid and are actively traded in over-the-counter markets.

Table of Contents

Level 2 Observable inputs other than Level 1 prices, such as quoted prices for similar assets or liabilities; quoted prices in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities. Level 2 assets include U.S. government and agency mortgage-backed debt securities, corporate securities, municipal bonds, and Community Reinvestment Act funds. This category includes derivative assets and liabilities where values are based on internal cash flow models supported by market data inputs.

Level 3 Unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities. Level 3 assets and liabilities include financial instruments whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, as well as instruments for which the determination of fair values requires significant management judgment or estimation. This category also includes impaired loans and OREO where collateral values have been based on third party appraisals; however, due to current economic conditions, comparative sales data typically used in appraisals may be unavailable or more subjective due to lack of market activity. Additionally, this category includes certain mortgage loans that were transferred from loans held for sale to loans held for investment at a lower of cost or fair value.

Assets and liabilities measured at fair value at March 31, 2011 are as follows (in thousands):

	Fair Value Measurements Using		
	Level 1	Level 2	Level 3
Available for sale securities:[1]			
Mortgage-backed securities	$	$121,913	$
Corporate securities		5,000	
Municipals		37,526	
Other		7,551	
Loans[2] [4]			75,909
OREO[3] [4]			26,172
Derivative asset[5]		5,122	
Derivative liability[5]		(5,122)	

(1) Securities are measured at fair value on a recurring basis, generally monthly.

(2) Includes certain mortgage loans that have been transferred to loans held for investment from loans held for sale at the lower of cost or market. Also, includes impaired loans that have been measured for impairment at the fair value of the loan s collateral.

(3) OREO is transferred from loans to OREO at fair value less selling costs.

(4) Fair value of loans and OREO is measured on a nonrecurring basis, generally annually or more often as warranted by market and economic conditions

(5) Derivative assets and liabilities are measured at fair value on a recurring basis, generally quarterly.

Level 3 Valuations

Financial instruments are considered Level 3 when their values are determined using pricing models, discounted cash flow methodologies or similar techniques and at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation. Currently, we measure fair value for certain loans on a nonrecurring basis as described below.

Loans

During the three months ended March 31, 2011, certain impaired loans were remeasured and reported at fair value through a specific valuation allowance allocation of the allowance for possible loan losses based upon the fair value of the underlying collateral. The $75.9 million total above includes impaired loans at March 31, 2011 with a carrying value of $82.6 million that were reduced by specific valuation allowance allocations totaling $11.3 million for a total reported fair value of $71.3 million based on collateral valuations utilizing Level 3 valuation inputs. Fair values were based on third party appraisals; however, based on the current economic conditions, comparative sales data typically used in the appraisals may be unavailable or more subjective due to the lack of real estate market activity. Also included in this total are $5.5 million in mortgage

warehouse loans that were reduced by specific valuation allowance allocations totaling $795,000, for a total reported fair value of $4.7 million. Certain mortgage loans that were transferred from loans held for sale to loans held for investment were valued based on third party broker pricing. As the dollar amount and number of loans being valued is very small, a comprehensive market analysis is not obtained or considered necessary. Instead, we conduct a general polling of one or more mortgage brokers for indications of general market prices for the types of mortgage loans being valued, and we consider values based on recent experience in selling loans of like terms and comparable quality.

OREO

Certain foreclosed assets, upon initial recognition, were valued based on third party appraisals. At March 31, 2011, OREO with a carrying value of $36.6 million was reduced by specific valuation allowance allocations totaling $10.4 million for a total reported fair value of $26.2 million based on valuations utilizing Level 3 valuation inputs. Fair values were based on third party appraisals; however, based on the current economic conditions, comparative sales data typically used in the appraisals may be unavailable or more subjective due to the lack of real estate market activity.

Fair Value of Financial Instruments

Generally accepted accounting principles require disclosure of fair value information about financial instruments, whether or not recognized on the balance sheet, for which it is practical to estimate that value. In cases where quoted market prices are not available, fair values are based on estimates using present value or other valuation techniques. Those techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. This disclosure does not and is not intended to represent the fair value of the Company.

A summary of the carrying amounts and estimated fair values of financial instruments is as follows (in thousands):

	March 31, 2011		December 31, 2010	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Cash and cash equivalents	$ 223,720	$ 223,720	$ 179,866	$ 179,866
Securities, available-for-sale	171,990	171,990	185,424	185,424
Loans held for sale	811,400	811,400	1,194,209	1,194,209
Loans held for sale from discontinued operations	488	488	490	490
Loans held for investment, net	4,641,176	4,653,368	4,639,820	4,652,588
Derivative asset	5,122	5,122	6,874	6,874
Deposits	5,221,991	5,231,602	5,455,401	5,457,692
Federal funds purchased	115,870	115,870	283,781	283,781
Borrowings	18,125	18,126	14,106	14,107
Trust preferred subordinated debentures	113,406	113,406	113,406	113,406
Derivative liability	5,122	5,122	6,874	6,874

The following methods and assumptions were used by the Company in estimating its fair value disclosures for financial instruments:

Cash and cash equivalents

The carrying amounts reported in the consolidated balance sheet for cash and cash equivalents approximate their fair value.

Securities

The fair value of investment securities is based on prices obtained from independent pricing services which are based on quoted market prices for the same or similar securities.

Table of Contents

Loans, net

For variable-rate loans that reprice frequently with no significant change in credit risk, fair values are generally based on carrying values. The fair value for all other loans is estimated using discounted cash flow analyses, using interest rates currently being offered for loans with similar terms to borrowers of similar credit quality. The carrying amount of accrued interest approximates its fair value. The carrying amount of loans held for sale approximates fair value.

Derivatives

The estimated fair value of the interest rate swaps are based on internal cash flow models supported by market data inputs.

Deposits

The carrying amounts for variable-rate money market accounts approximate their fair value. Fixed-term certificates of deposit fair values are estimated using a discounted cash flow calculation that applies interest rates currently being offered on certificates to a schedule of aggregated expected monthly maturities.

Federal funds purchased, other borrowings and trust preferred subordinated debentures

The carrying value reported in the consolidated balance sheet for federal funds purchased and other borrowings approximates their fair value. The fair value of other borrowings and trust preferred subordinated debentures is estimated using a discounted cash flow calculation that applies interest rates currently being offered on similar borrowings.

Off-balance sheet instruments

Fair values for our off-balance sheet instruments which consist of lending commitments and standby letters of credit are based on fees currently charged to enter into similar agreements, taking into account the remaining terms of the agreements and the counterparties credit standing. Management believes that the fair value of these off-balance sheet instruments is not significant.

(11) STOCKHOLDERS EQUITY

We had comprehensive income of $11.7 million for the three months ended March 31, 2011 and comprehensive income of $7.7 million for the three months ended March 31, 2010. Comprehensive income during the three months ended March 31, 2011 included a net after-tax loss of $160,000 and comprehensive income during the three months ended March 31, 2010 included a net after-tax gain of $185,000 due to changes in the net unrealized gains/losses on securities available-for-sale.

(12) NEW ACCOUNTING PRONOUNCEMENTS

FASB ASC 310 Receivables (ASC 310) was amended to enhance disclosures about credit quality of financing receivables and the allowance for credit losses. The amendments require an entity to disclose credit quality information, such as internal risk grades, more detailed nonaccrual and past due information, and modifications of its financing receivables. The disclosures under ASC 310, as amended, were effective for interim and annual reporting periods ending on or after December 15, 2010. This amendment did not have a significant impact on our financial results, but it has significantly expanded the disclosures that we are required to provide.

On April 5, 2011, the FASB issued ASU 2011-02 A Creditor s Determination of Whether a Restructuring is a Troubled Debt Restructuring , which clarifies when creditors should classify loan modifications as troubled debt restructurings. The guidance is effective for interim and annual periods beginning on or after June 15, 2011, and applies retrospectively to restructurings occurring on or after the beginning of the year. The guidance on measuring the impairment of a receivable restructured in a troubled debt restructuring is effective on a prospective basis. We are currently evaluating the new guidance.

ITEM 2. MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Forward-Looking Statements

Statements and financial analysis contained in this document that are not historical facts are forward looking statements made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995 (the Act). In addition, certain statements may be contained in our future filings with SEC, in press releases, and in oral and written statements made by or with our approval that are not statements of historical fact and constitute forward-looking statement within the meaning of the Act. Forward looking statements describe our future plans, strategies and expectations and are based on certain assumptions. Words such as believes , anticipates , expects , intends , targeted , continue , remain , will , should , may and other similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements.

Forward-looking statements involve risks and uncertainties, many of which are beyond our control that may cause actual results to differ materially from those in such statements. The important factors that could cause actual results to differ materially from the forward looking statements include, but are not limited to, the following:

(1) Changes in interest rates and the relationship between rate indices, including LIBOR and Fed Funds

(2) Changes in the levels of loan prepayments, which could affect the value of our loans or investment securities

(3) Changes in general economic and business conditions in areas or markets where we compete

(4) Competition from banks and other financial institutions for loans and customer deposits

(5) The failure of assumptions underlying the establishment of and provisions made to the allowance for credit losses and differences in assumptions utilized by banking regulators which could have retroactive impact

(6) The loss of senior management or operating personnel and the potential inability to hire qualified personnel at reasonable compensation levels

(7) Changes in government regulations including changes as a result of the current economic crisis. On July 21, 2010, the Dodd-Frank Act was signed into law. The Dodd-Frank Act represents a significant overhaul of many aspects of the regulation of the financial services industry.

Forward-looking statements speak only as of the date on which such statements are made. We have no obligation to update or revise any forward-looking statements as a result of new information or future events. In light of these assumptions, risks and uncertainties, the events discussed in any forward-looking statements in this quarterly report might not occur.

Results of Operations

Except as otherwise noted, all amounts and disclosures throughout this document reflect continuing operations. See Part I, Item 1 herein for a discussion of discontinued operations at Note (9) Discontinued Operations.

Summary of Performance

We reported net income of $11.9 million, or $0.31 per diluted common share, for the first quarter of 2011 compared to $7.6 million, or $0.21 per diluted common share, for the first quarter of 2010. Return on average equity was 8.91% and return on average assets was .78% for the first quarter of 2011, compared to 6.21% and .57%, respectively, for the first quarter of 2010.

Net income increased $4.3 million, or 57%, for the three months ended March 31, 2011 as compared to the same period in 2010. The $4.3 million increase during the three months ended March 31, 2011, was primarily

the result of a $9.3 million increase in net interest income, a $736,000 increase in non-interest income and a $6.0 million decrease in the provision for credit losses, offset by a $9.2 million increase in non-interest expense and a $2.5 million increase in income tax expense.

Details of the changes in the various components of net income are further discussed below.

Net Interest Income

Net interest income was $64.5 million for the first quarter of 2011, compared to $55.2 million for the first quarter of 2010. The increase was due to an increase in average earning assets of $808.3 million as compared to the first quarter of 2010 and an increase in the net interest margin from 4.43% to 4.46%. The increase in average earning assets included a $308.0 million increase in average loans held for investment and a $278.2 million increase in loans held for sale, offset by a $76.1 million decrease in average securities. For the quarter ended March 31, 2011, average net loans and securities represented 93% and 3%, respectively, of average earning assets compared to 95% and 5% in the same quarter of 2010.

Average interest bearing liabilities increased $266.5 million from the first quarter of 2010, which included a $568.6 million increase in interest bearing deposits offset by a $302.0 million decrease in other borrowings. The significant decrease in average other borrowings is a result of the growth in demand deposits and interest bearing deposits, reducing the need for borrowed funds. The average cost of interest bearing deposits and borrowed funds decreased from .94% for the quarter ended March 31, 2010 to .51% for the same period of 2011.

The following table presents the changes (in thousands) in taxable-equivalent net interest income and identifies the changes due to differences in the average volume of earning assets and interest-bearing liabilities and the changes due to changes in the average interest rate on those assets and liabilities.

	Three months ended March 31, 2011/2010		
		Change Due To[1]	
	Change	Volume	Yield/Rate
Interest income:			
Securities[2]	$ (901)	$ (856)	$ (45)
Loans held for sale	3,187	3,339	(152)
Loans held for investment	3,284	3,913	(629)
Federal funds sold	26	10	16
Deposits in other banks	188	191	(3)
Total	5,784	6,597	(813)
Interest expense:			
Transaction deposits	(209)	(14)	(195)
Savings deposits	(1,153)	1,384	(2,537)
Time deposits	(866)	(435)	(431)
Deposits in foreign branches	(659)	76	(735)
Borrowed funds	(578)	(272)	(306)
Total	(3,465)	739	(4,204)
Net interest income	$ 9,249	$ 5,858	$ 3,391

(1) Changes attributable to both volume and yield/rate are allocated to both volume and yield/rate on an equal basis.

(2) Taxable equivalent rates used where applicable.

Net interest margin from continuing operations, the ratio of net interest income to average earning assets from continuing operations, was 4.46% for the first quarter of 2011 compared to 4.43% for the first quarter of 2010. This 3 basis point increase was a result of a decline in the costs of interest bearing liabilities and growth in non-interest bearing deposits and stockholders equity, as well as improved pricing on loans. Total cost of funding, including demand deposits and stockholders equity decreased from .68% for the first quarter of 2010 to .37% for the first quarter of 2011. The benefit of the reduction in funding costs was complimented by a 31 basis point increase in yields on earning assets.

Table of Contents

Non-interest Income

The components of non-interest income were as follows (in thousands):

	Three months ended March 31,	
	2011	2010
Service charges on deposit accounts	$ 1,783	$ 1,483
Trust fee income	954	954
Bank owned life insurance (BOLI) income	523	471
Brokered loan fees	2,520	1,904
Equipment rental income	783	1,344
Other	1,121	792
Total non-interest income	$ 7,684	$ 6,948

Non-interest income increased $736,000 during the three months ended March 31, 2011 to $7.7 million compared to $6.9 million during the same period of 2010. This increase is primarily related to an increase of $616,000 in brokered loan fees as compared to the same period in 2010, related to an increase in warehouse lending volumes. Service charges increased $300,000 during the three months ended March 31, 2011 as compared to the same period in 2010 related to an increase in the level of demand deposits. Other non-interest income increased $329,000 as compared to 2010, also contributed to the year-over-year increase in non-interest income. Offsetting these increases was a $561,000 decrease in equipment rental income related to a decline in the leased equipment portfolio.

While management expects continued growth in non-interest income, the future rate of growth could be affected by increased competition from nationwide and regional financial institutions. In order to achieve continued growth in non-interest income, we may need to introduce new products or enter into new markets. Any new product introduction or new market entry could place additional demands on capital and managerial resources.

Non-interest Expense

The components of non-interest expense were as follows (in thousands):

	Three months ended March 31,	
	2011	2010
Salaries and employee benefits	$ 24,172	$ 20,069
Net occupancy expense	3,310	3,014
Leased equipment depreciation	556	1,059
Marketing	2,123	787
Legal and professional	2,723	1,950
Communications and data processing	2,347	1,926
FDIC insurance assessment	2,511	1,868
Allowance and other carrying costs for OREO	4,030	2,292
Other	4,627	4,221
Total non-interest expense	$ 46,399	$ 37,186

Non-interest expense for the first quarter of 2011 increased $9.2 million, or 25%, to $46.4 million from $37.2 million in the first quarter of 2010. The increase is primarily attributable to a $4.1 million increase in salaries and employee benefits, which was primarily due to general business growth.

Occupancy expense for the three months ended March 31, 2011 increased $296,000, or 10%, compared to the same quarter in 2010 as a result of general business growth.

Leased equipment depreciation expense for the three months ended March 31, 2011 decreased $503,000

compared to the same quarter in 2010 as a result of a decline in the leased equipment portfolio.
Marketing expense for the three months ended March 31, 2011 increased $1.3 million, or 170%, compared to the same quarter in 2010, which was primarily due to general business growth.
Legal and professional expense for the three months ended March 31, 2011 increased $773,000, or 40%, compared to same quarter in 2010. Our legal and professional expense will continue to fluctuate from quarter to quarter and could increase in the future as we respond to continued regulatory changes and continued credit situations related to the current economic conditions.
FDIC insurance assessment expense increased by $643,000 from $1.9 million in 2010 to $2.5 million due to higher rates and increase in our deposit base. The FDIC assessment rates could continue to increase and will continue to be a factor in our expense growth.
For the three months ended March 31, 2011, allowance and other carrying costs for OREO increased $1.7 million, to $4.0 million, $3.3 million of which related to deteriorating values of assets held in OREO. Of the $3.3 million valuation expense, $1.9 million was related to increasing the valuation allowance during the quarter. The remaining $1.4 million related to direct write-downs of the OREO balance.

Analysis of Financial Condition

Loan Portfolio

Total loans net of allowance for loan losses at March 31, 2011 decreased $381.5 million from December 31, 2010 to $5.5 billion. Combined commercial, construction, real estate, consumer loans and leases decreased $157,000. Loans held for sale decreased $382.8 million from December 31, 2010. We anticipate that overall loan growth during the remainder of 2011 will be less than experienced in prior years as a result of tightened credit standards and reduced demand for credit due to overall economic conditions.
Loans were as follows as of the dates indicated (in thousands):

	March 31, 2011	December 31, 2010
Commercial	$ 2,541,784	$ 2,592,924
Construction	349,442	270,008
Real estate	1,746,100	1,759,758
Consumer	21,590	21,470
Leases	80,694	95,607
Gross loans held for investment	4,739,610	4,739,767
Deferred income (net of direct origination costs)	(28,186)	(28,437)
Allowance for loan losses	(70,248)	(71,510)
Total loans held for investment, net	4,641,176	4,639,820
Loans held for sale	811,400	1,194,209
Total	$ 5,452,576	$ 5,834,029

We continue to lend primarily in Texas. As of March 31, 2011, a substantial majority of the principal amount of the loans held for investment in our portfolio was to businesses and individuals in Texas. This geographic concentration subjects the loan portfolio to the general economic conditions in Texas. The risks created by these concentrations have been considered by management in the determination of the adequacy of the allowance for loan losses. Management believes the allowance for loan losses is adequate to cover estimated losses on loans at each balance sheet date.
We originate substantially all of the loans in our portfolio, except participations in residential mortgage loans held for sale, select loan participations and syndications, which are underwritten independently by us prior to purchase and certain USDA and SBA government guaranteed loans that we purchase in the secondary market. We also participate

in syndicated loan relationships, both as a participant and as an agent. As of March 31,

2011, we have $592.4 million in syndicated loans, $204.6 million of which we acted as agent. All syndicated loans, whether we act as agent or participant, are underwritten to the same standards as all other loans originated by us. In addition, as of March 31, 2011, $3.3 million of our syndicated loans were nonperforming.

Summary of Loan Loss Experience

The provision for credit losses is a charge to earnings to maintain the reserve for loan losses at a level consistent with management s assessment of the loan portfolio in light of current economic conditions and market trends. We recorded a provision of $7.5 million during the first quarter of 2011 compared to $13.5 million in the first quarter of 2010 and $12.0 million in the fourth quarter of 2010. The amount of reserves and provision required to support the reserve have increased over the last two years as a result of credit deterioration in our loan portfolio driven by negative changes in national and regional economic conditions and the impact of those conditions on the financial condition of borrowers and the values of assets, including real estate assets, pledged as collateral.

The reserve for loan losses is comprised of specific reserves for impaired loans and an estimate of losses inherent in the portfolio at the balance sheet date, but not yet identified with specified loans. We regularly evaluate our reserve for loan losses to maintain an adequate level to absorb estimated loan losses inherent in the loan portfolio. Factors contributing to the determination of reserves include the credit worthiness of the borrower, changes in the value of pledged collateral, and general economic conditions. All loan commitments rated substandard or worse and greater than $500,000 are specifically reviewed for loss potential. For loans deemed to be impaired, a specific allocation is assigned based on the losses expected to be realized from those loans. For purposes of determining the general reserve, the portfolio is segregated by product types to recognize differing risk profiles among categories, and then further segregated by credit grades. Credit grades are assigned to all loans. Each credit grade is assigned a risk factor, or reserve allocation percentage. These risk factors are multiplied by the outstanding principal balance and risk-weighted by product type to calculate the required reserve. A similar process is employed to calculate a reserve assigned to off-balance sheet commitments, specifically unfunded loan commitments and letters of credit. Even though portions of the allowance may be allocated to specific loans, the entire allowance is available for any credit that, in management s judgment, should be charged off.

The reserve allocation percentages assigned to each credit grade have been developed based primarily on an analysis of our historical loss rates. The allocations are adjusted for certain qualitative factors for such things as general economic conditions, changes in credit policies and lending standards. Changes in the trend and severity of problem loans can cause the estimation of losses to differ from past experience. In addition, the reserve considers the results of reviews performed by independent third party reviewers as reflected in their confirmations of assigned credit grades within the portfolio. The portion of the allowance that is not derived by the allowance allocation percentages compensates for the uncertainty and complexity in estimating loan and lease losses including factors and conditions that may not be fully reflected in the determination and application of the allowance allocation percentages. We evaluate many factors and conditions in determining the unallocated portion of the allowance, including the economic and business conditions affecting key lending areas, credit quality trends and general growth in the portfolio. The allowance is considered adequate and appropriate, given management s assessment of potential losses within the portfolio as of the evaluation date, the significant growth in the loan and lease portfolio, current economic conditions in the Company s market areas and other factors.

The methodology used in the periodic review of reserve adequacy, which is performed at least quarterly, is designed to be dynamic and responsive to changes in portfolio credit quality. The changes are reflected in the general reserve and in specific reserves as the collectability of larger classified loans is evaluated with new information. As our portfolio has matured, historical loss ratios have been closely monitored, and our reserve adequacy relies primarily on our loss history. Currently, the review of reserve adequacy is performed by executive management and presented to our board of directors for their review, consideration and ratification on a quarterly basis.

The combined reserve for credit losses, which includes a liability for losses on unfunded commitments, totaled $72.0 million at March 31, 2011, $73.4 million at December 31, 2010 and $75.1 million at March 31, 2010. The total reserve percentage decreased to 1.53% at March 31, 2011 from 1.56% of loans held for investment at December 31, 2010 and decreased from 1.69% of loans held for investment at March 31, 2010. The total reserve percentage has increased over the past two years as a result of the effects of national and regional

economic conditions on borrowers and values of assets pledged as collateral. These changes in economic conditions have resulted in increases in loans with weakened credit quality and nonperforming loans. The overall reserve for loan losses continues to be driven by the loan loss reserve methodology as described above. At March 31, 2011, we believe the reserve is sufficient to cover all expected losses in the portfolio and has been derived from consistent application of the methodology described above. Should any of the factors considered by management in evaluating the adequacy of the allowance for loan losses change, our estimate of expected losses in the portfolio could also change, which would affect the level of future provisions for loan losses.

Activity in the reserve for loan losses is presented in the following table (in thousands):

	Three months ended March 31, 2011	Three months ended March 31, 2010	Year ended December 31, 2010
Reserve for loan losses:			
Beginning balance	$ 71,510	$ 67,931	$ 67,931
Loans charged-off:			
Commercial	1,993	7,551	27,723
Real estate construction		420	12,438
Real estate term	7,364	766	9,517
Consumer	34		216
Equipment leases	532	594	1,555
Total charge-offs	9,923	9,331	51,449
Recoveries:			
Commercial	546	23	176
Real estate construction	243		1
Real estate term	31	8	138
Consumer	1		4
Equipment leases	150	20	158
Total recoveries	971	51	477
Net charge-offs	8,952	9,280	50,972
Provision for loan losses	7,690	13,054	54,551
Ending balance	$ 70,248	$ 71,705	$ 71,510
Reserve for off-balance sheet credit losses:			
Beginning balance	$ 1,897	$ 2,948	$ 2,948
Provision (benefit) for off-balance sheet credit losses	(190)	446	(1,051)
Ending balance	$ 1,707	$ 3,394	$ 1,897
Total reserve for credit losses	$ 71,955	$ 75,099	$ 73,407
Total provision for credit losses	$ 7,500	$ 13,500	$ 53,500
Reserve for loan losses to loans held for investment[2]	1.49%	1.61%	1.52%
Net charge-offs to average loans[1] [2]	0.77%	0.85%	1.14%
Total provision for credit losses to average loans[2]	0.64%	1.24%	1.20%
Recoveries to total charge-offs	9.79%	0.55%	0.93%
Reserve for loan losses as a multiple of net charge-offs	7.8x	7.7x	1.4x
Reserve for off-balance sheet credit losses to off-balance sheet credit commitments	0.11%	0.29%	0.14%

Combined reserves for credit losses to loans held for investment[2]	1.53%	1.69%	1.56%
Non-performing assets:			
Non-accrual loans	$ 116,479	$ 115,926	$ 112,090
OREO[4]	26,172	28,865	42,261
Total	$ 142,651	$ 144,791	$ 154,351
Restructured loans	$ 22,219	$ 10,700	$ 4,319
Loans past due 90 days and still accruing[3]	2,529	2,390	6,706
Reserve as a percent of non-performing loans[2]	.6x	.6x	.6x

(1) Interim period ratios are annualized.

(2) Excludes loans held for sale.

(3) At March 31, 2011, December 31, 2010 and March 31, 2010, loans past due 90 days and still accruing includes premium finance loans of $2.4 million, $3.3 million and $2.0 million, respectively. These loans are generally secured by obligations of insurance carriers to refund premiums on cancelled insurance policies. The refund of premiums from the insurance carriers can take 180 days or longer from the cancellation date.

(4) At March 31, 2011, December 31, 2010 and March 31, 2010, OREO balance is net of $10.4 million, $12.9 million and $8.5 million valuation allowance, respectively.

Non-performing Assets

Non-performing assets include non-accrual loans and leases and repossessed assets. The table below summarizes our non-accrual loans by type (in thousands):

	March 31, 2011	March 31, 2010	December 31, 2010
Non-accrual loans			
Commercial	$ 42,993	$ 44,292	$ 42,543
Construction	2,640	19,183	21
Real estate	66,174	41,271	62,497
Consumer	669	535	706
Leases	4,003	10,645	6,323
Total non-accrual loans	$ 116,479	$ 115,926	$ 112,090

The table below summarizes the non-accrual loans as segregated by loan type and type of property securing the credit as of March 31, 2011 (in thousands):

Non-accrual loans:	
Commercial	
Lines of credit secured by the following:	
Oil and gas properties	$ 19,980
Various single family residences and notes receivable	10,063
Assets of the borrowers	8,176
Other	4,774
Total commercial	42,993
Construction	
Secured by:	
Unimproved land and/or undeveloped residential lots	2,620
Other	20
Total construction	2,640
Real estate	
Secured by:	
Commercial property	26,236
Unimproved land and/or undeveloped residential lots	16,288
Rental properties and multi-family residential real estate	8,796
Single family residences	9,878
Other	4,976
Total real estate	66,174
Consumer	669
Leases (commercial leases primarily secured by assets of the lessor)	4,003
Total non-accrual loans	$ 116,479

Generally, we place loans on non-accrual when there is a clear indication that the borrower s cash flow may not be sufficient to meet payments as they become due, which is generally when a loan is 90 days past due. When a loan is placed on non-accrual status, all previously accrued and unpaid interest is reversed. Interest income is subsequently recognized on a cash basis as long as the remaining unpaid principal amount of the loan is deemed to be fully collectible. If collectability is questionable, then cash payments are applied to principal. As of March 31, 2011, none of our non-accrual loans were earning on a cash basis.

A loan is considered impaired when, based on current information and events, it is probable that we will be unable to collect all amounts due (both principal and interest) according to the terms of the original loan agreement. Reserves on impaired loans are measured based on the present value of the expected future cash flows discounted at the loan s effective interest rate or the fair value of the underlying collateral.

At March 31, 2011, we had $2.6 million in loans past due 90 days and still accruing interest. At March 31, 2011, $2.4 million of the loans past due 90 days and still accruing are premium finance loans. These loans are primarily secured by obligations of insurance carriers to refund premiums on cancelled insurance policies. The refund of premiums from the insurance carriers can take 180 days or longer from the cancellation date.

Restructured loans are loans on which, due to the borrower s financial difficulties, we have granted a concession that we would not otherwise consider. This may include a transfer of real estate or other assets from the borrower, a modification of loan terms, or a combination of the two. Modifications of terms that could potentially qualify as a restructuring include reduction of contractual interest rate, extension of the maturity date at a contractual interest rate lower than the current rate for new debt with similar risk, or a reduction of the face amount of debt, or either forgiveness of either principal or accrued interest. As of March 31, 2011, we have $22.2 million in loans considered restructured that are not already on nonaccrual. Of the nonaccrual loans at March 31, 2011, $29.2 million met the criteria for restructured. A loan continues to qualify as restructured until a consistent payment history has been evidenced, generally no less than twelve months. A loan is placed back on accrual status when both principal and interest are current and it is probable that we will be able to collect all amounts due (both principal and interest) according to the terms of the loan agreement.

Potential problem loans consist of loans that are performing in accordance with contractual terms but for which we have concerns about the borrower s ability to comply with repayment terms because of the borrower s potential financial difficulties. We monitor these loans closely and review their performance on a regular basis. At March 31, 2011 and 2010, we had $13.8 million and $46.3 million, respectively, in loans of this type which were not included in either non-accrual or 90 days past due categories.

The table below presents a summary of the activity related to OREO (in thousands):

	Three months ended March 31,	
	2011	2010
Beginning balance	$ 42,261	$ 27,264
Additions	926	29,559
Sales	(13,695)	(6,058)
Valuation allowance for OREO	(1,921)	(6,587)
Direct write-downs	(1,399)	(1,917)
Ending balance	$ 26,172	$ 42,261

The following table summarizes the assets held in OREO at March 31, 2011 (in thousands):

Unimproved commercial real estate lots and land	$ 7,051
Commercial buildings	2,120
Undeveloped land and residential lots	11,054
Multifamily lots and land	1,229
Other	4,718
Total OREO	$ 26,172

When foreclosure occurs, fair value, which is generally based on appraised values, may result in partial charge-off of a loan upon taking property, and so long as property is retained, subsequent reductions in appraised values will result in valuation adjustment taken as non-interest expense. In addition, if the decline in value is believed to be permanent and not just driven by market conditions, a direct write-down to the OREO balance may be taken. We generally pursue sales of OREO when conditions warrant, but we may choose to hold certain properties for a longer term, which can

result in additional exposure related to the appraised values during that holding period. During the three months ended March 31, 2011, we recorded $3.3 million in valuation expense. Of the $3.3 million, $1.9 million related to increases to the valuation allowance, and $1.4 million related to direct write-downs.

Liquidity and Capital Resources

In general terms, liquidity is a measurement of our ability to meet our cash needs. Our objective in managing our liquidity is to maintain our ability to meet loan commitments, purchase securities or repay deposits and other liabilities in accordance with their terms, without an adverse impact on our current or future earnings. Our liquidity strategy is guided by policies, which are formulated and monitored by our senior management and our Balance Sheet Management Committee (BSMC), and which take into account the marketability of assets, the sources and stability of funding and the level of unfunded commitments. We regularly evaluate all of our various funding sources with an emphasis on accessibility, stability, reliability and cost-effectiveness. For the year ended December 31, 2010 and for three months ended March 31, 2011, our principal source of funding has been our customer deposits, supplemented by our short-term and long-term borrowings, primarily from federal funds purchased and Federal Home Loan Bank (FHLB) borrowings.

Our liquidity needs have typically been fulfilled through growth in our core customer deposits and supplemented with brokered deposits and borrowings as needed. Our goal is to obtain as much of our funding for loans held for investment and other earnings assets as possible from deposits of these core customers. These deposits are generated principally through development of long-term relationships with customers and stockholders and our retail network, which is mainly through BankDirect. In addition to deposits from our core customers, we also have access to incremental deposits through brokered retail certificates of deposit, or CDs. Since December 31, 2009, growth in customer deposits eliminated the need for use of brokered CDs and none were outstanding at March 31, 2011. In prior periods, brokered CDs were generally of short maturities, 30 to 90 days, and were used to supplement temporary differences in the growth in loans, including growth in specific categories of loans, compared to customer deposits.

The following tab summarizes our core customer deposits and brokered deposits (in millions):

	March 31, 2011	March 31, 2010	December 31, 2010
Deposits from core customers	$ 5,222.0	$ 4,359.2	$ 5,455.4
Deposits from core customers as a percent of total deposits	100.0%	98.9%	100.0%
Brokered deposits	$	$ 50.6	$
Brokered deposits as a percent of total deposits	0.0%	1.1%	0.0%
Average deposits from core customers[1]	$ 5,319.3	$ 4,191.5	$ 4,982.6
Average deposits from core customers as a percent of total quarterly average deposits[1]	100.0%	97.7%	99.4%
Average brokered deposits[1]	$	$ 97.9	$ 28.6
Average brokered deposits as a percent of total quarterly average deposits[1]	0.0%	2.3%	0.6%

(1) Annual averages presented for December 31, 2010.

We have access to sources of brokered deposits of not less than an additional $3.3 billion. Based on the reduction in brokered CDs, customer deposits (total deposits minus brokered CDs) increased by $862.8 million from March 31, 2010 and decreased $233.4 million from December 31, 2010.

Additionally, we have borrowing sources available to supplement deposits and meet our funding needs. Such borrowings are generally used to fund our loans held for sale, due to their liquidity, short duration and interest spreads available. These borrowing sources include federal funds purchased from our downstream correspondent bank relationships (which consist of banks that are smaller than our bank) and from our upstream correspondent bank relationships (which consist of banks that are larger than our bank), customer repurchase agreements, treasury, tax and

loan notes, and advances from the FHLB and the Federal Reserve. The following table summarizes our borrowings as of March 31, 2011 (in thousands):

Table of Contents

Federal funds purchased	$ 115,870
Customer repurchase agreements	14,716
Treasury, tax and loan notes	3,328
FHLB borrowings	81
Trust preferred subordinated debentures	113,406
Total borrowings	$ 247,401
Maximum outstanding at any month-end during the year	$ 289,207

The following table summarizes our other borrowing capacities in excess of balances outstanding at March 31, 2011 (in thousands):

FHLB borrowing capacity relating to loans	$ 897,864
FHLB borrowing capacity relating to securities	113,455
Total FHLB borrowing capacity	$ 1,011,319
Unused federal funds lines available from commercial banks	$ 393,360

Our equity capital averaged $543.3 million for the three months ended March 31, 2011, as compared to $496.1 million for the same period in 2010. This increase reflects our retention of net earnings during this period. We have not paid any cash dividends on our common stock since we commenced operations and have no plans to do so in the near future.

Our capital ratios remain above the levels required to be well capitalized and have been enhanced with the additional capital raised since 2008 and will allow us to grow organically with the addition of loan and deposit relationships.

Commitments and Contractual Obligations

The following table presents significant fixed and determinable contractual obligations to third parties by payment date. Payments for borrowings do not include interest. Payments related to leases are based on actual payments specified in the underlying contracts. As of March 31, 2011, our significant fixed and determinable contractual obligations to third parties were as follows (in thousands):

	Within One Year	After One but Within Three Years	After Three but Within Five Years	After Five Years	Total
Deposits without a stated maturity[1]	$4,277,459	$	$	$	$4,277,459
Time deposits[1]	864,338	62,331	17,076	787	944,532
Federal funds purchased[1]	115,870				115,870
Customer repurchase agreements[1]	14,716				14,716
Treasury, tax and loan notes[1]	3,328				3,328
FHLB borrowings[1]			81		81

Operating lease obligations[1] [2]	8,775	17,481	16,117	43,592	85,965
Trust preferred subordinated debentures[1]				113,406	113,406
Total contractual obligations	$5,284,486	$79,812	$ 33,274	$157,785	$5,555,357

(1) Excludes interest.

(2) Non-balance sheet item.

SEC guidance requires disclosure of critical accounting policies. The SEC defines critical accounting policies as those that are most important to the presentation of a company s financial condition and results, and require management s most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain.

32

We follow financial accounting and reporting policies that are in accordance with accounting principles generally accepted in the United States. The more significant of these policies are summarized in Note 1 to the consolidated financial statements. Not all these significant accounting policies require management to make difficult, subjective or complex judgments. However, the policy noted below could be deemed to meet the SEC s definition of critical accounting policies.

Management considers the policies related to the allowance for loan losses as the most critical to the financial statement presentation. The total allowance for loan losses includes activity related to allowances calculated in accordance with Accounting Standards Codification (ASC) 310, *Receivables*, and ASC 450, *Contingencies*. The allowance for loan losses is established through a provision for loan losses charged to current earnings. The amount maintained in the allowance reflects management s continuing evaluation of the loan losses inherent in the loan portfolio. The allowance for loan losses is comprised of specific reserves assigned to certain classified loans and general reserves. Factors contributing to the determination of specific reserves include the credit-worthiness of the borrower, and more specifically, changes in the expected future receipt of principal and interest payments and/or in the value of pledged collateral. A reserve is recorded when the carrying amount of the loan exceeds the discounted estimated cash flows using the loan s initial effective interest rate or the fair value of the collateral for certain collateral dependent loans. For purposes of determining the general reserve, the portfolio is segregated by product types in order to recognize differing risk profiles among categories, and then further segregated by credit grades. See Summary of Loan Loss Experience for further discussion of the risk factors considered by management in establishing the allowance for loan losses.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Market risk is a broad term for the risk of economic loss due to adverse changes in the fair value of a financial instrument. These changes may be the result of various factors, including interest rates, foreign exchange rates, commodity prices, or equity prices. Additionally, the financial instruments subject to market risk can be classified either as held for trading purposes or held for other than trading.

We are subject to market risk primarily through the effect of changes in interest rates on our portfolio of assets held for purposes other than trading. The effect of other changes, such as foreign exchange rates, commodity prices, and/or equity prices do not pose significant market risk to us.

The responsibility for managing market risk rests with the BSMC, which operates under policy guidelines established by our board of directors. The negative acceptable variation in net interest revenue due to a 200 basis point increase or decrease in interest rates is generally limited by these guidelines to +/- 5%. These guidelines also establish maximum levels for short-term borrowings, short-term assets and public and brokered deposits. They also establish minimum levels for unpledged assets, among other things. Compliance with these guidelines is the ongoing responsibility of the BSMC, with exceptions reported to our board of directors on a quarterly basis.

Interest Rate Risk Management

Our interest rate sensitivity is illustrated in the following table. The table reflects rate-sensitive positions as of March 31, 2011, and is not necessarily indicative of positions on other dates. The balances of interest rate sensitive assets and liabilities are presented in the periods in which they next reprice to market rates or mature and are aggregated to show the interest rate sensitivity gap. The mismatch between repricings or maturities within a time period is commonly referred to as the gap for that period. A positive gap (asset sensitive), where interest rate sensitive assets exceed interest rate sensitive liabilities, generally will result in the net interest margin increasing in a rising rate environment and decreasing in a falling rate environment. A negative gap (liability sensitive) will generally have the opposite results on the net interest margin. To reflect anticipated prepayments, certain asset and liability categories are shown in the table using estimated cash flows rather than contractual cash flows. The Company employs interest rate floors in certain variable rate loans to enhance the yield on those loans at times when market interest rates are extraordinarily low. The degree of asset sensitivity, spreads on loans and net interest margin may be reduced until rates increase by an amount sufficient to eliminate the effects of floors. The adverse effect of floors as market rates increase may also be offset by the positive gap, the extent to which rates on deposits and other funding sources lag increasing market rates and changes in composition of funding.

Interest Rate Sensitivity Gap Analysis
March 31, 2011
(In thousands)

	0-3 mo Balance	4-12 mo Balance	1-3 yr Balance	3+ yr Balance	Total Balance
Securities[1]	$ 34,550	$ 33,355	$ 48,562	$ 55,523	$ 171,990

Cumulative GAP	1,479,649	1,524,388	1,718,776	1,734,790	1,734,790
Demand deposits					$ 1,480,695
Stockholders equity					544,925
Total					$ 2,025,620

(1) Securities based on fair market value.

(2) Loans include loans held for sale and are stated at gross.

The table above sets forth the balances as of March 31, 2011 for interest bearing assets, interest bearing liabilities, and the total of non-interest bearing deposits and stockholders equity. While a gap interest table is useful in analyzing interest rate sensitivity, an interest rate sensitivity simulation provides a better illustration of the sensitivity of earnings

to changes in interest rates. Earnings are also affected by the effects of changing interest rates on the value of funding derived from demand deposits and stockholders equity. We perform a sensitivity analysis to identify interest rate risk exposure on net interest income. We quantify and measure interest rate risk exposure using a model to dynamically simulate the effect of changes in net interest income relative to changes in interest rates and account balances over the next twelve months based on three interest rate scenarios. These are a most likely rate scenario and two shock test scenarios.

The most likely rate scenario is based on the consensus forecast of future interest rates published by independent sources. These forecasts incorporate future spot rates and relevant spreads of instruments that are actively traded in the open market. The Federal Reserve s Federal Funds target affects short-term borrowing; the prime lending rate and the LIBOR are the basis for most of our variable-rate loan pricing. The 10-year mortgage rate is also monitored because of its effect on prepayment speeds for mortgage-backed securities. These are our primary interest rate exposures. We are currently not using derivatives to manage our interest rate exposure.

The two shock test scenarios assume a sustained parallel 200 basis point increase or decrease, respectively, in interest rates. As short-term rates continued to fall during 2009 and remain low in 2010, we could not assume interest rate decreases of any amount as the results of the decreasing rates scenario would not be meaningful. We will continue to evaluate these scenarios as interest rates change, until short-term rates rise above 3.0%.

Table of Contents

Our interest rate risk exposure model incorporates assumptions regarding the level of interest rate or balance changes on indeterminable maturity deposits (demand deposits, interest bearing transaction accounts and savings accounts) for a given level of market rate changes. These assumptions have been developed through a combination of historical analysis and future expected pricing behavior. Changes in prepayment behavior of mortgage-backed securities, residential and commercial mortgage loans in each rate environment are captured using industry estimates of prepayment speeds for various coupon segments of the portfolio. The impact of planned growth and new business activities is factored into the simulation model. This modeling indicated interest rate sensitivity as follows (in thousands):

	Anticipated Impact Over the Next Twelve Months as Compared to Most Likely Scenario 200 bp Increase March 31, 2011
Change in net interest income	$ 15,775

The simulations used to manage market risk are based on numerous assumptions regarding the effect of changes in interest rates on the timing and extent of repricing characteristics, future cash flows, and customer behavior. These assumptions are inherently uncertain and, as a result, the model cannot precisely estimate net interest income or precisely predict the impact of higher or lower interest rates on net interest income. Actual results will differ from simulated results due to timing, magnitude and frequency of interest rate changes as well as changes in market conditions and management strategies, among other factors.

Table of Contents

ITEM 4. CONTROLS AND PROCEDURES

Our management, including our chief executive officer and chief financial officer, have evaluated our disclosure controls and procedures as of March 31, 2011, and concluded that those disclosure controls and procedures are effective. There have been no changes in our internal controls or in other factors known to us that could materially affect these controls subsequent to their evaluation, nor any corrective actions with regard to significant deficiencies and material weaknesses. While we believe that our existing disclosure controls and procedures have been effective to accomplish these objectives, we intend to continue to examine, refine and formalize our disclosure controls and procedures and to monitor ongoing developments in this area.

PART II OTHER INFORMATION

ITEM 1A. RISK FACTORS

There has not been any material change in the risk factors previously disclosed in the Company s 2010 Form 10-K for the fiscal year ended December 31, 2010.
