Commission File No. 0-10144

DAWSON GEOPHYSICAL COMPANY

Texas
*(State or other jurisdiction of
incorporation or organization)*

75-0970548
*(I.R.S. Employer
Identification No.)*

508 West Wall, Suite 800, Midland, Texas 79701
(Principal Executive Office)
Telephone Number: 432-684-3000

Securities registered pursuant to Section 12(b) of the Act:
None

Securities registered pursuant to Section 12(g) of the Act:

Title of Each Class

Common Stock, \$.331/3 par value

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Edgar Filing: DAWSON GEOPHYSICAL CO - Form 10-K

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company
(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

As of March 31, 2008, the aggregate market value of Dawson Geophysical Company common stock, par value \$0.331/3 per share, held by non-affiliates (based upon the closing transaction price on Nasdaq) was approximately \$505,043,037.

On November 28, 2008, there were 7,794,744 shares of Dawson Geophysical Company common stock, \$0.331/3 par value, outstanding.

As used in this report, the terms we, our, us, Dawson and the Company refer to Dawson Geophysical Company the context indicates otherwise.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Registrant's Proxy Statement for its 2008 Annual Meeting of Shareholders to be held on January 27, 2009 are incorporated by reference into Part III of this Annual Report on Form 10-K.

DAWSON GEOPHYSICAL COMPANY

FORM 10-K

For the Fiscal Year Ended September 30, 2008

DISCLOSURE REGARDING FORWARD-LOOKING STATEMENTS

All statements other than statements of historical fact included in this Form 10-K, including without limitation statements under Management's Discussion and Analysis of Financial Condition and Results of Operations and Business regarding technological advancements and our financial position, business strategy and plans and objectives of our management for future operations, are forward-looking statements within the meaning of Section 27A of the Securities Act and Section 21E of the Securities Exchange Act of 1934, as amended (the Exchange Act). When used in this Form 10-K, words such as anticipate, believe, estimate, expect, intend and similar expressions, as they relate to us or our management, identify forward-looking statements. Such forward-looking statements are based on the beliefs of our management, as well as assumptions made by and information currently available to management. Actual results could differ materially from those contemplated by the forward-looking statements as a result of certain factors, including but not limited to the volatility of oil and natural gas prices, disruptions in the global economy, dependence upon energy industry spending, limited number of customers, credit risk related to our customers, delays, reductions or cancellations of service contracts, high fixed costs of operations, weather interruptions, inability to obtain land access rights of way, industry competition, managing growth, the availability of capital resources and operational disruptions. See Risk Factors for more information on these and other factors. These forward-looking statements reflect our current views with respect to future events and are subject to these and other risks, uncertainties and assumptions relating to our operations, results of operations, growth strategies and liquidity. All subsequent written and oral forward-looking statements attributable to us or persons acting on our behalf are expressly qualified in their entirety by this paragraph. We assume no obligation to update any such forward-looking statements.

Part I

Item 1. BUSINESS

General

Dawson Geophysical Company (the Company) is the leading provider of onshore seismic data acquisition services in the lower 48 states of the United States as measured by the number of active data acquisition crews. Founded in 1952, we acquire and process 2-D, 3-D, and multi-component seismic data for our clients, ranging from major oil and gas companies to independent oil and gas operators, as well as providers of multi-client data libraries. In the past few years, substantially all of our clients have been focused on the exploration for and production of natural gas. Our clients rely on seismic data to identify areas where subsurface conditions are favorable for the accumulation of hydrocarbons and to optimize the development and production of hydrocarbon reservoirs. During fiscal 2008, substantially all of our revenues were derived from 3-D seismic data acquisition operations.

As of September 30, 2008, we operated sixteen 3-D seismic data acquisition crews in the lower 48 states of the United States and a seismic data processing center. We market and supplement our services from our headquarters in Midland, Texas and from additional offices in Houston, Denver, Oklahoma City, and Michigan. Our geophysicists perform data processing in our Midland, Houston, and Oklahoma City offices, and our field operations are supported from our field office facility in Midland. The results of a seismic survey conducted for a client belong to that client. We do not acquire seismic data for our own account nor do we participate in oil and gas ventures.

Higher commodity prices since 2004 have led to a significant increase in the level of spending for domestic exploration and development of oil and natural gas reserves during the last few years. This resulted in greater demand for newly-acquired seismic data by many exploration companies particularly those seeking natural gas reserves. These factors have enabled us to expand our data acquisition and processing capacity. By increasing the number and size of our data acquisition crews and our channel count, we have fortified our position as the leading provider of onshore seismic data acquisition services in the United States, resulting in increased market share in terms of the number of active crews operating. The expansion began in fiscal 2004 with six active crews and

Table of Contents

continued through fiscal 2007 with the addition of a total of nine data acquisition crews during this period, as well as increases in recording capacity and channel count company-wide and improvements to our data processing center. During fiscal 2008 demand for our high-resolution 3-D seismic services continued at a high pace, despite fluctuations in oil and natural gas prices, and we continued our growth by fielding an additional crew.

Business Strategy

Our strategy is to maintain our leadership position in the U.S. onshore market. Key elements of our strategy include:

Attracting and retaining skilled and experienced personnel for our data acquisition and processing operations;

Providing integrated in-house services necessary in each phase of seismic data acquisition and processing, including project design, land access permitting, surveying and related support functions as well as continuing the enhancement of our in-house health, safety, security and environmental programs;

Maintaining the focus of our operations solely on the domestic onshore seismic market;

Continuing to operate with conservative financial discipline;

Updating our capabilities to incorporate advances in geophysical and supporting technologies; and

Acquiring equipment to expand the recording channel capacity on our existing crews and equipping additional crews as market conditions permit.

Business Description

Geophysical Services Overview. Our business consists of the acquisition and processing of seismic data to produce an image of the earth's subsurface. The seismic method involves the recording of reflected acoustic or sonic waves from below the ground. In our operations, we introduce acoustic energy into the ground by using an acoustic energy source, usually large vibrating machines and occasionally through the detonation of dynamite. We then record the subsequent reflected energy, or echoes, with recording devices placed along the earth's surface. These recording devices, or geophones, are placed on the ground in groups of six or more and connected together as a single recording channel. We generally use multiple recording channels in our seismic surveys. Additional recording channels enhance the clarity of the seismic survey much in the same way as additional pixels add resolution to televisions and computer monitors.

We are able to collect seismic data using either 2-D or 3-D methods. The 2-D method involves the collection of seismic data in a linear fashion thus generating a single plane of subsurface seismic data. Continued technological advances in seismic equipment and computing allow us to economically acquire and process data by placing large numbers of energy sources and recording channels over a broad area. The industry refers to the technique of broad distribution of energy sources and recording channels as the 3-D seismic method. The 3-D method produces an immense volume of seismic data which produces more precise images of the earth's subsurface. Geophysicists use computers to interpret 3-D seismic data volumes, generate geologic models of the earth's subsurface, and identify subsurface features that are favorable for the accumulation of hydrocarbons.

3-D seismic data are used in the exploration for new reserves and enable oil and gas companies to better delineate existing fields and to augment their reservoir management techniques. Benefits of incorporating high resolution 3-D seismic surveys into exploration and development programs include reducing drilling risk, decreasing oil and natural gas finding costs and increasing the efficiencies of reservoir location, delineation and management. In order to meet

the requirements necessary to fully realize the benefits of 3-D seismic data, there is an increasing demand for improved data quality with greater subsurface resolution. We are prepared to meet such demands with the implementation of improved techniques and evolving technology. One such technique is better survey design integrating a greater number of recording channels, more dense energy source distribution and improved seismic data processing technologies. Our geophysicists perform these design tasks.

Table of Contents

Data Acquisition. The seismic survey begins at the time a client requests that we formulate a proposal to acquire seismic data on its behalf. Geophysicists then assist the client in designing the specifications of the proposed 3-D survey. If the client accepts our proposal, permit agents then obtain access rights of way from surface and mineral estate owners or lessees where the survey is to be conducted.

Utilizing electronic surveying equipment, survey personnel precisely locate the energy source and receiver positions from which the seismic data are collected. We primarily use vibrator energy sources which are mounted on vehicles, the majority of which weigh 62,000 pounds each, to generate seismic energy, but occasionally we detonate dynamite charges placed in drill holes below the earth's surface. We use third-party contractors for the drilling of holes and the purchasing, handling and disposition of dynamite charges. We use third-party helicopter services to move equipment in areas of difficult terrain in an effort to increase efficiency and reduce safety risk.

We began fiscal 2004 with an operating capacity of six land-based seismic data acquisition crews with an aggregate recording channel count of approximately 25,000 and fifty-two vibrator energy source units. At fiscal year-end 2008, we operated sixteen crews, 147 vibrator energy source units, and had capacity in excess of 117,000 recording channels, any of which may be configured to meet the demands of specific survey designs. Each crew consists of approximately forty to eighty technicians, twenty-five or more vehicles with off-road capabilities, over 42,000 geophones, a seismic recording system, energy sources, electronic cables and a variety of other equipment.

During the fiscal year, we added an additional data acquisition crew equipped with a redeployed I/O System II MRX cable-based recording system. In November 2007, we replaced an I/O System II MRX recording system on an existing crew with a 7,500 channel ARAM ARIES system. We replaced a second I/O System II MRX recording system on another existing crew with an 8,000 channel ARAM ARIES recording system in April 2008. In addition, we purchased thirty ION vibrator energy source units, four IVI Enviro mini-vibrators, and increased channel count to in excess of 117,000.

Of the sixteen crews in operation at September 30, 2008, six are equipped with I/O System II RSR radio-based recording systems, three with I/O System II MRX cable-based recording systems, and seven with ARAM ARIES cable-based recording systems. All of our recording systems utilize similar types of geophones and record equivalent seismic information but vary in the manner by which seismic data are transferred to the central recording unit, as well as their operational flexibility and channel count expandability. In November 2008, we replaced an I/O System II MRX recording system with an ARAM ARIES II recording system equipped with recording channels from existing ARAM ARIES crews upon the completion of several high channel count projects. It is our intention to continue the operation of the I/O System II MRX recording system as a small 2-D crew into January 2009.

Client demand for more recording channels continues to increase as the industry strives for improved data quality with greater subsurface resolution. We believe this trend will continue and that our ability to deploy a large number of recording channels and multiple energy source units provides us with the competitive advantages of operational versatility and increased productivity, in addition to improved data quality.

Data Processing. We currently operate a computer center located in Midland, Texas and provide additional processing services through our Houston and Oklahoma City offices. Data processing primarily involves the enhancement of seismic data by improving reflected signal resolution, removing ambient noise and establishing proper spatial relationships of geological features. The data are then formatted in such a manner that computer graphic technology may be employed for examination and interpretation of the data by the user.

We continue to improve data processing efficiency and accuracy with the addition of improved processing software and high-speed computer technology. We purchase, develop or lease seismic data processing software under non-exclusive licensing arrangements.

Our computer center processes seismic data collected by our crews, as well as by other geophysical contractors. In addition, we reprocess previously recorded seismic data using current technology to enhance the data quality. Our processing contracts may be awarded jointly with, or independently from, data acquisition services. Data processing services comprise a small portion of our overall revenues.

Integrated Services. We maintain integrated in-house operations necessary to the development and completion of seismic surveys. Our experienced personnel have the capability to conduct or supervise the seismic

Table of Contents

survey design, permitting, surveying, data acquisition and processing functions for each seismic program. In-house support operations include health, safety, security and environmental programs as well as facilities for automotive repair, automotive paint and body repair, electronics repair, electrical engineering and software development. In addition, we maintain a fleet of tractor trailers to transport our seismic acquisition equipment to our survey sites. We believe that maintaining as many of these functions in-house as possible contributes to better quality control and improved efficiency in our operations. Our clients generally provide their own interpretation of the seismic data provided by us.

Equipment Acquisition and Capital Expenditures

We monitor and evaluate advances in geophysical technology and commit capital funds to purchase equipment we deem most effective to maintain our competitive position. Purchasing new assets and upgrading existing capital assets requires a commitment to capital spending. For fiscal year 2008, we made capital expenditures of \$52,861,000, in part to complete the fielding of an additional data acquisition crew, expand channel count on existing crews, purchase thirty additional energy source units, and replace two I/O System II MRX recording systems on existing crews with ARAM ARIES recording systems. Our Board of Directors approved an initial fiscal 2009 budget of \$20,000,000 to purchase additional recording channels, make technical improvements in various phases of the Company's operations, and meet maintenance capital requirements. We believe that these additions will allow the Company to maintain its competitive position as it responds to client desire for higher resolution subsurface images.

Clients

Our services are marketed by supervisory and executive personnel who contact clients to determine geophysical needs and respond to client inquiries regarding the availability of crews or processing schedules. These contacts are based principally upon professional relationships developed over a number of years.

Our clients range from major oil and gas companies to small independent oil and gas operators and also providers of multi-client data libraries. The services we provide to our clients vary according to the size and needs of each client. During fiscal 2008, sales to our two largest clients, Chesapeake Energy Corporation and SandRidge Energy, Inc., represented 36% and 20% of our revenues, respectively. The remaining balance of our fiscal 2008 revenue was derived from varied clients and none represented 10% or more of our fiscal 2008 revenues. Although 56% of our fiscal 2008 revenues were derived from two clients, we believe that our relationship with these clients is well founded for continued contractual commitments for the foreseeable future in multiple producing basins across the lower 48 states. While still expected to be significant clients, we do anticipate a fiscal 2009 reduction in sales to these two clients.

We do not acquire data for our own account or for future sale, maintain any multi-client data libraries or participate in oil and gas ventures. The results of a seismic survey conducted for a client belong to that client. It is also our policy that none of our officers, directors or employees actively participate in oil and natural gas ventures. All of our clients information is maintained in the strictest confidence.

Contracts

Our data acquisition services are conducted under master service contracts with our clients. These master service contracts define certain obligations for us and for our clients. A supplemental agreement setting forth the terms of a specific project, which may be cancelled by either party on short notice, is entered into for every data acquisition project. The supplemental agreements are either turnkey agreements that provide for a fixed fee to be paid to us for each unit of data acquired, or term agreements that provide for a fixed hourly, daily or monthly fee during the term of the project or projects. Turnkey agreements generally provide us more profit potential, but involve more risks because

of the potential of crew downtime or operational delays. We attempt to negotiate on a project-by-project basis some level of weather downtime protection within the turnkey agreements. Under the term agreements, we forego an increased profit potential in exchange for a more consistent revenue stream with improved protection from crew downtime or operational delays.

We currently operate under both turnkey and term supplemental agreements.

Table of Contents

Competition

The acquisition and processing of seismic data for the oil and natural gas industry is a highly competitive business in the United States. Contracts for such services generally are awarded on the basis of price quotations, crew experience and availability of crews to perform in a timely manner, although factors other than price, such as crew safety performance history and technological and operational expertise are often determinative. Our competitors include companies with financial resources that are significantly greater than our own as well as companies of comparable and smaller size. Our primary competitors are CGG Veritas, Petroleum Geo-Services ASA, Geokinetics Inc., Global Geophysical Services, and Tidelands Geophysical Company.

Employees

As of October 30, 2008, we employed approximately 1,436 persons, of which 1,310 were engaged in providing energy sources and acquiring data. With respect to the remainder of our employees, thirteen are engaged in data processing, thirty-one are administrative personnel, sixty-eight are engaged in equipment maintenance and transport and fourteen are officers. Of the employees listed above, ten are geophysicists. Our employees are not represented by a labor union. We believe we have good relations with our employees.

Available Information

All of our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and all amendments to those reports filed with or furnished to the Securities and Exchange Commission (SEC) on or after May 9, 1995 are available free of charge through our Internet Website, www.dawson3d.com, as soon as reasonably practical after we have electronically filed such material with, or furnished it to, the SEC. Information contained on our Internet Website is not incorporated by reference in this Annual Report on Form 10-K. In addition, the SEC maintains an Internet site containing reports, proxy and information statements, and other information filed electronically at www.sec.gov. You may also read and copy this information, for a copying fee, at the SEC's Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549. Please call the SEC at 1-800-SEC-0330 to obtain information on the operation of the Public Reference Room.

Item 1A. RISK FACTORS

An investment in our common stock is subject to a number of risks discussed below. You should carefully consider these discussions of risk and the other information included in this Form 10-K. If any of the following risks were actually to occur, our business, financial condition or results of operations could be materially adversely affected.

Recent decreases in the market price of oil and natural gas, disruptions in the global financial markets and the global economy generally may decrease demand for our seismic services and cause downward pressure on the prices we charge.

Since August 2008, the market price for oil and natural gas has declined significantly. In addition, recent disruptions and instability in the global financial markets and difficulties in worldwide economic conditions have resulted in a significant reduction in the availability of funds from debt and equity capital markets and other capital markets while conditions in the global and domestic economy have increased uncertainty and diminished expectations for many businesses, including producers of oil and natural gas. As a result of these developments, many of our customers may be unable to implement their development plans and may be forced to significantly reduce their capital expenditures. If our customers reduce their capital expenditures, it would result in diminished demand for our seismic services and may cause downward pressure on the prices we charge or the level of work we do for our clients. During the third quarter of 2008, several of our clients reduced the size or delayed seismic projects as a result of the decline in oil and

natural gas prices and the disruptions in the capital markets and economy. A significant and prolonged reduction in demand for seismic services would have a material adverse effect on our results of operations.

Table of Contents

If oil and natural gas prices or the level of capital expenditures by oil and gas companies were to decline, demand for our services would decline and our results of operations would be adversely affected.

Demand for our services depends upon the level of spending by oil and gas companies for exploration, production, development and field management activities, which depend, in part, on oil and natural gas prices. Significant fluctuations in oil and natural gas exploration activities and commodity prices have adversely affected the demand for our services and our results of operations in years past and would do so again if there was a sustained decline in the prices for oil and natural gas. While in recent years, the price of oil and natural gas has been historically high and exploration activities have been strong, since August 2008, the price of oil and natural gas has declined significantly. In addition to the market price of oil and natural gas, our clients' willingness to explore, develop and produce depends largely upon prevailing industry conditions that are influenced by numerous factors over which our management has no control, including the market price for oil and natural gas and economic conditions. There can be no assurance that the current level of energy prices will not decline further or that exploration and development activities by our clients will continue to be as strong as in recent years. A significant sustained drop in oil and natural gas prices or the inability of our clients to secure funding for new exploration projects would have a negative impact on demand for our services. During the third quarter of 2008, several of our clients reduced the size or delayed seismic projects as a result of the decline in oil and natural gas prices and the disruptions in the capital markets and economy. Because substantially all of our current clients' projects are focused on the exploration for natural gas, a sustained significant decline in the price of natural gas would have a particularly negative effect on the demand for our services. Any significant decline in exploration or production-related spending by our clients, whether due to a decrease in the market price for oil and natural gas or otherwise, could cause us to alter our capital spending plans and would have a material adverse effect on our results of operations. Additionally, increases in oil and gas prices may not increase demand for our products and services or otherwise have a positive effect on our results of operations or financial condition.

Factors affecting the price of oil and natural gas and our clients' desire to explore, develop and produce include:

the level of supply and demand for oil and natural gas;

level of prices, and expectations about future prices, for oil and natural gas;

the ability of oil and gas producers to raise equity capital and debt financing;

worldwide political, military and economic conditions, including the ability of the Organization of Petroleum Exporting Countries to set and maintain production levels and prices for oil;

the cost of exploring for, developing and producing oil and natural gas;

government policies regarding the exploration for, and production and development of oil and natural gas reserves;

level of taxation relating to the energy industry, including taxation of consumption of energy sources; and

weather conditions, including large-scale weather events such as hurricanes that affect oil and gas operations over a wide area or affect prices or locally inclement weather that can preclude or delay our seismic operations.

The markets for oil and natural gas have historically been volatile and are likely to continue to be so in the future.

A limited number of customers account for a significant portion of our revenues, and the loss of one of these customers could harm our results of operations; we generally do not require our clients to pay in advance or to secure their obligations to us, so any failure to pay by these clients could harm our results of operations.

Although our ten largest customers in fiscal 2008 and 2007 have varied, these customers accounted for approximately 83% and 88% of our total revenue for these respective periods. For the year ended September 30, 2008, the Company's two largest clients represented approximately 36% and 20% of total revenues. If any of these

Table of Contents

significant clients were to terminate their contracts or fail to contract for our services in the future because they are acquired, alter their exploration or development strategy, or for any other reason, our results of operations could be affected. See Business Clients.

We bear the credit risk if any of our clients become insolvent and fail to pay amounts owed to the Company. Although we perform ongoing credit evaluations of our customers' financial conditions, we generally require no collateral from our customers. Our inability to collect accounts receivable could have a materially adverse effect on our results of operations. In addition, from time to time, we experience contractual disputes with our clients regarding the payment of invoices or other matters. While we seek to minimize these disputes and maintain good relations with our clients, we have in the past, and may in the future, experience disputes that could affect our revenues and results of operations in any period.

Our clients could delay, reduce or cancel their service contracts with us on short notice, which may lead to lower than expected demand and revenues.

Our order book consists of written orders or commitments for our services that we believe to be firm. We believe we currently have a sufficient order book to sustain operations at full capacity into calendar 2009 on all sixteen crews. However, our clients can delay, reduce or cancel their service contracts with us on short notice. As a result, our order book as of any particular date may not be indicative of actual revenues for any succeeding fiscal period.

The high fixed costs of our operations could adversely affect our results of operations.

Our business has high fixed costs. As a result, any significant downtime or low productivity caused by reduced demand, weather interruptions, equipment failures, permit delays or other causes could adversely affect our results of operations.

Our revenues are subject to fluctuations that are beyond our control which could adversely affect our results of operations in any financial period.

Our operating results vary in material respects from quarter to quarter and will continue to do so in the future. Factors that cause variations include the timing of the receipt and commencement of contracts for data acquisition, permit delays, weather delays, holiday schedules and crew productivity. Combined with our high fixed costs, these revenue fluctuations could produce unexpected adverse results of operations in any fiscal period.

Our operations are subject to weather conditions which could adversely affect our results of operations.

Our seismic data acquisition operations could be adversely affected by inclement weather conditions. Delays associated with weather conditions could adversely affect our results of operations. See Business Contracts.

Our operations are subject to delays related to obtaining land access rights of way from third parties which could affect our results of operations.

Our seismic data acquisition operations could be adversely affected by our inability to obtain timely right of way usage from both public and private land and/or mineral owners. In recent years, it has become more difficult, costly and time-consuming to obtain access rights of way as drilling activities have expanded into more populated areas, and landowners have become more resistant to seismic and drilling activities occurring on their property. Delays associated with obtaining such rights of way could negatively affect our results.

We face intense competition in our business that could result in downward pricing pressure and the loss of market share.

The acquisition and processing of seismic data for the oil and natural gas industry is a highly competitive business in the United States. Some of our competitors have financial resources that are significantly greater than our own. Competition from these and other competitors could result in downward pricing pressure and the loss of market share. See Business Competition.

Table of Contents

If we do not manage our continued growth effectively, our results of operations could be affected.

We have experienced substantial growth during the last five fiscal years, adding ten seismic data acquisition crews during this period. This growth has presented a challenge to our systems, processes, resources, personnel, management and other infrastructure and support mechanisms. If we do not manage these growth challenges effectively, our profitability and results of operations could be adversely affected, our management resources may be diverted and our future growth could be impeded.

We may be unable to attract and retain skilled and technically knowledgeable employees which could adversely affect our business and our growth.

Our success depends upon attracting and retaining highly skilled professionals and other technical personnel. A number of our employees are highly skilled scientists and highly trained technicians, and our failure to continue to attract and retain such individuals could adversely affect our ability to compete in the seismic services industry. We may confront significant and potentially adverse competition for these skilled and technically knowledgeable personnel, particularly during periods of increased demand for seismic services. The increased demand for seismic services during the past few years has also made it difficult for the Company to hire additional skilled persons to join our data acquisition crews. Should this trend continue, the Company's ability to expand the number of operating data acquisition crews may be impaired. None of our employees are under employment contracts and we have no key man insurance.

Capital requirements for our operations are large. If we are unable to finance these requirements, our ability to continue our expansion and maintain our profitability could be affected.

Our sources of working capital are limited. We have historically funded our working capital requirements with cash generated from operations, cash reserves and short-term borrowings from commercial banks. In the past, we have also funded our capital expenditures and other financing needs through public equity offerings. Our working capital requirements continue to increase, primarily due to the expansion of our infrastructure in response to client demand for more recording channels, which has increased as the industry strives for improved data quality with greater subsurface resolutions. If we were to expand our operations at a rate exceeding operating cash flow, or if current demand or pricing of geophysical services were to decrease substantially, additional financing could be required. If we were not able to obtain such financing or renew our existing revolving line of credit when needed, our failure could have a negative impact on our ability to pursue expansion and maintain our profitability. See Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources.

Our results of operations could be adversely affected by asset impairments.

We periodically review our portfolio of equipment for impairment. If we expect significant sustained decreases in oil and natural gas prices in the future, we may be required to write down the value of our equipment if the future cash flows anticipated to be generated from the related equipment falls below net book value. The recent decline in oil and natural gas prices, if sustained, could result in future impairments. If we are forced to write down the value of our equipment, these noncash asset impairments could negatively affect our results of operations in the period in which they are recorded. See discussion of Impairment of Long-Lived Assets included in Critical Accounting Policies.

Technological change in our business creates risks of technological obsolescence and requirements for future capital expenditures. If we are unable to keep up with these technological advances, we may not be able to compete effectively.

Seismic data acquisition and data processing technologies historically have progressed rather rapidly and we expect this progression to continue. Our strategy is to regularly upgrade our data acquisition and processing equipment to maintain our competitive position. However, due to potential advances in technology and the related costs associated with such technological advances, we might not be able to fulfill this strategy, thus possibly affecting our ability to compete.

Table of Contents

We operate under hazardous conditions that subject us to risk of damage to property or personal injuries and may interrupt our business.

Our business is subject to the general risks inherent in land-based seismic data acquisition activities. Our activities are often conducted in remote areas under extreme weather and other dangerous conditions. These operations are subject to risks of injury to personnel and equipment. Our crews are mobile, and equipment and personnel are subject to vehicular accidents. We use diesel fuel which is classified by the U.S. Department of Transportation as a hazardous material. These risks could cause us to experience equipment losses, injuries to our personnel and interruptions in our business. Delays due to operational disruptions such as equipment losses, personnel injuries and business interruptions could adversely affect our profitability and results of operations.

We may be subject to liability claims that are not covered by our master service agreements or by insurance.

We could be subject to personal injury or real property damage claims in the normal operation of our business. Such claims may not be covered under the indemnification provisions in our master service agreements to the extent that the damage was due to our negligence, gross negligence or intentional misconduct.

In addition, we do not carry insurance against certain risks that we could experience, including business interruption resulting from equipment losses or weather delays. We obtain insurance against certain property and personal casualty risks and other risks when such insurance is available and when our management considers it advisable to do so. Such coverage is not always available or applicable and, when available, is subject to unilateral cancellation by the insuring companies on very short notice. Liabilities for which we are not insured, or which exceed the policy limits of our applicable insurance, could have a materially adverse effect on our results of operations.

Our industry is subject to governmental regulation which may adversely affect our future operations.

Our operations are subject to a variety of federal, state and local laws and regulations, including laws and regulations relating to protection of the environment and archeological sites. We are required to expend financial and managerial resources to comply with such laws and related permit requirements in our operations, and we anticipate that we will continue to be required to do so in the future. The fact that such laws or regulations change frequently makes it impossible for us to predict the cost or impact of such laws and regulations on our future operations. The adoption of laws and regulations that have the effect of reducing or curtailing exploration and production activities by energy companies could also adversely affect our operations by reducing the demand for our services.

Certain provisions of our charter and bylaws and our shareholder rights plan may make it difficult for a third party to acquire us, even in situations that may be viewed as desirable by shareholders.

Our articles of incorporation and bylaws contain provisions that authorize the issuance of preferred stock and establish advance notice requirements for director nominations and actions to be taken at shareholder meetings. These provisions could discourage or impede a tender offer, proxy contest or other similar transaction involving control of us, even in situations that may be viewed as desirable by our shareholders. In addition, we have adopted a shareholder rights plan that would likely discourage a hostile attempt to acquire control of us.

Failure to maintain effective internal controls in accordance with Section 404 of the Sarbanes-Oxley Act could have a material adverse effect on our stock price.

If, in the future, we fail to maintain the adequacy of our internal controls, as such standards are modified, supplemented or amended from time to time, we may not be able to ensure that we can conclude on an ongoing basis that we have effective internal controls over financial reporting in accordance with Section 404 of the Sarbanes-Oxley

Act. Failure to achieve and maintain an effective internal control environment could have a material adverse effect on the price of our common stock.

Table of Contents**Item 1B. UNRESOLVED STAFF COMMENTS**

None.

Item 2. PROPERTIES

Our principal facilities are summarized in the table below.

Location	Owned or Leased	Purpose	Building Area Square Feet
Midland, TX	Leased	Executive offices and data processing	29,960
Midland, TX	Owned	Field office	61,402
		Equipment fabrication facility	
		Maintenance and repairs shop	

We have operating leases in Houston, Denver and Oklahoma City for general office space. In addition, we have an operating lease for general office purposes, maintenance and repairs in Lyon Township, Michigan.

Our operations are limited to one industry segment and the United States.

Item 3. LEGAL PROCEEDINGS

From time to time, we are a party to various legal proceedings arising in the ordinary course of business. Although we cannot predict the outcomes of any such legal proceedings, our management believes that the resolution of pending legal actions will not have a material adverse effect on our financial condition, results of operations or liquidity.

On March 14, 2008, a wildfire in West Texas burned a remote area in which one of our data acquisition crews was operating. The fire destroyed approximately \$2.9 million net book value of our equipment, all of which was covered by our liability insurance, net of the deductible. In addition to the loss of equipment, a number of landowners in the fire area suffered damage to their grazing lands, livestock, fences and other improvements. We are currently repairing damage incurred by such landowners as a result of the fire. We currently estimate the likely amount of the landowner damages will be less than \$1.5 million. We believe any damages paid will be covered by our liability insurance.

Item 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matter has been submitted during the fourth quarter of the 2008 fiscal year to a vote of our security holders, through the solicitation of proxies or otherwise. However, please refer to our Proxy Statement for the Annual Meeting to be held on January 27, 2009 (the Proxy Statement), to be filed with the Securities and Exchange Commission, notifying security holders as to the election of directors and selection of KPMG LLP as our independent registered public accounting firm.

Table of Contents**Executive Officers of the Registrant**

Set forth below are the names, ages and positions of the Company's executive officers.

Name	Age	Position
L. Decker Dawson	88	Chairman of the Board of Directors
Stephen C. Jumper	47	President, Chief Executive Officer and Director
C. Ray Tobias	51	Executive Vice President, Chief Operating Officer
Christina W. Hagan	53	Executive Vice President, Secretary and Chief Financial Officer
Howell W. Pardue	72	Executive Vice President
K.S. Forsdick	57	Vice President

The Board of Directors elects executive officers annually. Executive officers hold office until their successors are elected and have qualified.

Set forth below are descriptions of the principal occupations during at least the past five years of the Company's executive officers.

L. Decker Dawson. Mr. Dawson founded the Company in 1952. He served as President of the Company until being elected as Chairman of the Board of Directors and Chief Executive Officer in January 2001. In January 2006, Mr. Dawson was reelected as Chairman of the Board of Directors and retired as Chief Executive Officer of the Company. Prior to 1952, Mr. Dawson was a geophysicist with Republic Exploration Company, a geophysical company. Mr. Dawson served as President of the Society of Exploration Geophysicists (1989-1990), received its Enterprise Award in 1997 and was awarded honorary membership in 2002. He was Chairman of the Board of Directors of the International Association of Geophysical Contractors in 1981 and is an honorary life member of such association. He was inducted into the Permian Basin Petroleum Museum's Hall of Fame in 1997.

Stephen C. Jumper. Mr. Jumper, a geophysicist, joined the Company in 1985, was elected Vice President of Technical Services in September 1997 and was subsequently elected President, Chief Operating Officer and Director in January 2001. In January 2006, Mr. Jumper was elected President, Chief Executive Officer and Director. Prior to 1997, Mr. Jumper served the Company as manager of technical services with an emphasis on 3-D processing. Mr. Jumper has served the Permian Basin Geophysical Society as Second Vice President (1991), First Vice President (1992) and as President (1993).

C. Ray Tobias. Mr. Tobias joined the Company in 1990, and was elected Vice President in September 1997 and Executive Vice President and Director in January 2001. In January 2006, Mr. Tobias was elected Executive Vice President and Chief Operating Officer. Mr. Tobias supervises client relationships and survey cost quotations to clients. He has served on the Board of Directors of the International Association of Geophysical Contractors and is Past President of the Permian Basin Geophysical Society. Prior to joining the Company, Mr. Tobias was employed by Geo-Search Corporation where he was an operations supervisor.

Christina W. Hagan. Ms. Hagan joined the Company in 1988, and was elected Chief Financial Officer and Vice President in 1997 and Senior Vice President, Secretary and Chief Financial Officer in January 2003. In January 2004, Ms. Hagan was elected as Executive Vice President, Secretary and Chief Financial Officer. Prior thereto, Ms. Hagan served the Company as Controller and Treasurer. Ms. Hagan is a certified public accountant.

Howell W. Pardue. Mr. Pardue joined the Company in 1976 as Vice President of Data Processing and Director. Mr. Pardue was elected Executive Vice President of Data Processing in 1997. Prior to joining the Company, Mr. Pardue was employed in data processing for 17 years by Geosource, Inc. and its predecessor geophysical company.

K.S. Forsdick. Mr. Forsdick joined the Company in 1993 and was elected Vice President in January 2001. Mr. Forsdick is responsible for soliciting, designing and bidding seismic surveys for prospective clients. Prior to joining the Company, Mr. Forsdick was employed by Grant Geophysical Company and Western Geophysical Company and was responsible for marketing and managing land and marine seismic surveys for domestic and

Table of Contents

international operations. He has served on the Governmental Affairs Committee of the International Association of Geophysical Contractors.

Part II**Item 5. MARKET FOR OUR COMMON EQUITY AND RELATED STOCKHOLDER MATTERS**

Our common stock trades on the Nasdaq Stock Market® under the symbol DWSN. The table below represents the high and low sales prices per share for the period shown.

Quarter Ended	High	Low
December 31, 2006	\$ 40.26	\$ 26.56
March 31, 2007	\$ 53.82	\$ 30.50
June 30, 2007	\$ 63.89	\$ 48.03
September 30, 2007	\$ 85.67	\$ 51.52
December 31, 2007	\$ 83.86	\$ 64.67
March 31, 2008	\$ 78.00	\$ 48.75
June 30, 2008	\$ 79.95	\$ 56.41
September 30, 2008	\$ 65.93	\$ 40.27

As of November 28, 2008, the market price for our common stock was \$20.145 per share and we had 177 common stockholders of record, as reported by our transfer agent.

We have not paid cash dividends on our common stock since becoming a public company and have no plans to do so in the foreseeable future.

The following table summarizes certain information regarding securities authorized for issuance under our equity compensation plans as of September 30, 2008. See information regarding material features of the plans in Note 1, Summary of Significant Accounting Policies, Stock-Based Compensation to the Financial Statements included herein.

Equity Compensation Plan Information

Plan Category	Number of Securities to be Issued Upon Exercise of Outstanding Options (a)	Weighted-Average Price of Outstanding Options (b)	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (Excluding Securities Reflected in Column (a)) (c)
----------------------	---	--	--

Equity compensation plans approved by security holders	23,250	\$	17.91	943,550(1)
Equity compensation plans not approved by security holders				
Total	23,250	\$	17.91	943,550(1)

(1) Although 238,550 shares are available to be issued under the 2000 Incentive Stock Plan and the 2004 Incentive Stock Plan, the Company does not intend to grant additional shares from either Plan. There are 705,000 shares available to be issued under the 2006 Stock and Performance Incentive Plan.

Table of Contents**Performance Graph**

The following graph compares the five-year cumulative total return of the Company's common stock as compared with the S&P 500 Stock Index and a peer group made up of companies in the Value-Line Oilfield Services Industry Index. The Value-Line Oilfield Services Industry Index consists of far larger companies that perform a variety of services as compared to land-based acquisition and processing of seismic data performed by the Company.

Comparison of 5-Year Cumulative Total Return*
Among Dawson Geophysical Company, the S & P 500 Index
and the Value-Line Oilfield Services Industry Index

	9/03	9/04	9/05	9/06	9/07	9/08
DAWSON GEOPHYSICAL COMPANY	100.00	303.63	439.04	431.06	1124.96	677.65
S & P 500	100.00	113.87	127.82	141.62	164.90	128.66
VALUE-LINE OILFIELD SERVICES	100.00	143.93	218.50	237.51	360.99	282.31

* \$100 invested on 9/30/03 in stock & index-including reinvestment of dividends. Fiscal year ending September 30.

Table of Contents**Item 6. SELECTED FINANCIAL DATA**

The following selected financial data should be read in conjunction with Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, and the Company's financial statements and related notes included in Item 8, Financial Statements and Supplementary Data.

Years Ended September 30	2008	2007	2006	2005	2004
	(In thousands, except per share amounts)				
Operating revenues	\$ 324,926	\$ 257,763	\$ 168,550	\$ 116,663	\$ 69,346
Net income	\$ 35,007	\$ 27,158	\$ 15,855	\$ 10,016	\$ 8,618
Net income per common share	\$ 4.57	\$ 3.57	\$ 2.11	\$ 1.50	\$ 1.55
Weighted average equivalent common shares outstanding	7,669	7,602	7,518	6,706	5,559
Total assets	\$ 233,621	\$ 195,862	\$ 149,418	\$ 114,127	\$ 56,759
Revolving line of credit	\$	\$ 5,000	\$	\$	\$
Long-term debt-less current maturities	\$	\$	\$	\$	\$
Stockholders' equity	\$ 185,960	\$ 149,155	\$ 119,208	\$ 101,904	\$ 50,282

In March 2005, we successfully completed a public offering of 1,800,000 shares of common stock such that weighted average equivalent common shares outstanding in 2005 reflect these additional shares for a portion of the year.

Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion of our financial condition and results of operations should be read in conjunction with the financial statements and notes to those statements included elsewhere in this Form 10-K. This discussion contains forward-looking statements that involve risks and uncertainties. Please see Risk Factors and Disclosure Regarding Forward-Looking Statements elsewhere in this Form 10-K.

Overview

We are the leading provider of onshore seismic data acquisition services in the lower 48 states of the United States as measured by the number of active data acquisition crews. Substantially all of our revenues are derived from the seismic data acquisition services we provide to our clients, mainly domestic oil and natural gas companies. Demand for our services depends upon the level of spending by these companies for exploration, production, development and field management activities, which depends, in part, on oil and natural gas prices. Significant fluctuations in domestic oil and natural gas exploration activities and commodity prices have affected the demand for our services and our results of operations in years past and continue to be the single most important factor affecting our business and results of operations. In the past few years, substantially all of our clients have been focused on the exploration for and production of natural gas.

Our return to profitability in fiscal 2004 after several years of losses was directly related to an increase in the level of exploration for domestic oil and natural gas reserves by the petroleum industry since 2003. The increased level of exploration was a function of higher prices for oil and natural gas. As a result of the increase in domestic exploration spending, we experienced an increased demand for our seismic data acquisition and processing services during this period, particularly from entities seeking natural gas reserves. Since August 2008 the price of oil and natural gas has

declined significantly and there has been a significant disruption in global credit markets. As a result of these factors, during the third quarter of 2008 several of our clients reduced the size of or delayed seismic projects. While the markets for oil and natural gas have been very volatile and are likely to continue to be volatile in the future and we can make no assurances as to future levels of domestic exploration or commodity prices, we believe opportunities exist for us to enhance our market position by responding to our clients' continuing desire for higher resolution subsurface images. We have continued to experience high demand for our services despite recent fluctuations in oil and natural gas prices. However, a significant sustained drop in oil and natural gas prices or the inability of our clients to secure funding for new exploration projects would have a negative impact on demand for

Table of Contents

our services. Because substantially all of our current clients are focused on the exploration for and production of natural gas, a sustained significant decline in the price of natural gas in particular would have a negative effect on the demand for our services.

We continue to focus on increasing the revenues and profitability of our existing crews by upgrading our recording capacity, expanding the channel count on existing crews, adding to our energy source fleet and utilizing related technologies. While our revenues are mainly affected by the level of client demand for our services, our revenues are also affected by the pricing for our services that we negotiate with our clients and the productivity of our data acquisition crews, including factors such as crew downtime related to inclement weather, delays in acquiring land access permits, or equipment failure. Consequently, our successful efforts to negotiate more favorable contract terms in our supplemental service agreements, to mitigate access permit delays and to improve overall crew productivity may contribute to growth in our revenues. Although our clients may cancel their supplemental service agreements with us on short notice, we believe we currently have a sufficient order book to sustain operations at full capacity into calendar 2009 on all sixteen crews.

Fiscal 2008 Highlights

Our financial performance for fiscal 2008 significantly improved when compared to our financial performance for fiscal 2007 as a result of the continuing strong demand for our seismic services due to high levels of exploration and development activities, particularly by entities seeking natural gas reserves. As a result of continuing high demand, we:

Repaid all \$20,000,000 outstanding under the Company's revolving line of credit in the fourth quarter;

Replaced an I/O System II MRX recording system on an existing crew with a 7,500 channel ARAM ARIES recording system;

Replaced an I/O System II MRX recording system on an existing crew with an 8,000 channel ARAM ARIES recording system;

Took delivery of thirty ION vibrator energy source units;

Added four IVI Enviro mini-vibrator energy source units used to operate in urban and sensitive environments. The Company now operates eight such units;

Increased channel count from 102,000 to in excess of 117,000;

Redeployed an existing I/O System II MRX recording system on an additional crew bringing the total of the Company's operating data acquisition crews to sixteen; and

Operated in West Texas, South Texas, Fort Worth Basin of Texas, New Mexico, Oklahoma, Arkansas, Colorado, Utah, Montana, West Virginia, Pennsylvania, California, Louisiana, Nevada and New York.

Fiscal Year Ended September 30, 2008 Versus Fiscal Year Ended September 30, 2007

Operating Revenues. Our operating revenues increased 26% from \$257,763,000 in fiscal 2007 to \$324,926,000 in fiscal 2008 as a result of continuing high demand for our services. Revenue growth in fiscal 2008 was primarily the result of the addition of new seismic data acquisition crews in September 2007 and May 2008 and the upgrading of recording systems on existing crews, along with increased channel counts and productivity on existing crews.

Recorded in fiscal 2008 revenues are continued high third-party charges primarily related to the use of helicopter support services, specialized survey technologies, and dynamite energy sources, all of which are utilized in areas with limited access. The sustained level of these charges during fiscal 2008 was driven by our continued operations in areas with limited access in the Appalachian Basin, the Rocky Mountains, the Fayetteville Shale, and the Arkoma Basin. We are reimbursed for these charges by our clients.

Operating Costs. Our operating expenses increased 25% from \$190,117,000 in fiscal 2007 to \$237,484,000 in fiscal 2008 primarily due to the full year of service for the three acquisition crews deployed in fiscal 2007 and the additional crew placed into service in fiscal 2008. As discussed above, reimbursed charges have a similar impact on operating costs.

Table of Contents

General and administrative expenses were 2.1% of revenues in fiscal 2008 as compared to 2.4% of revenues in fiscal 2007. While the ratio of general and administrative expenses to revenue declined in fiscal 2008 due to the increase in revenues, the actual dollar amount increased. The increase of \$567,000 from fiscal 2007 to fiscal 2008 reflects ongoing expenses necessary to support expanded field operations.

We recognized \$24,253,000 of depreciation expense in fiscal 2008 as compared to \$18,103,000 in fiscal 2007, reflecting the full year of depreciation expense from our fiscal 2007 capital expenditures. Our depreciation expense is expected to continue to increase in fiscal 2009 as a result of our significant capital expenditures in fiscal 2008.

Our total operating costs for fiscal 2008 were \$268,499,000, an increase of 25% from fiscal 2007 primarily due to the factors described above.

Taxes. Our effective tax rates for fiscal 2008 and 2007 were 37.9% and 38.9%, respectively. The decrease in the effective tax rate in fiscal 2008 as compared to fiscal 2007 was primarily a result of changes in state tax rates as a result of the varying states in which we operate from year to year.

Fiscal Year Ended September 30, 2007 Versus Fiscal Year Ended September 30, 2006

Operating Revenues. Our operating revenues increased 53% from \$168,550,000 in fiscal 2006 to \$257,763,000 in fiscal 2007 as a result of continuing high demand for our services. Revenue growth in fiscal 2007 was primarily due to the addition of three seismic data acquisition crews along with pricing and productivity improvements realized from the expanded capabilities of existing crews. Recorded in the fourth quarter revenues are continued high third-party charges primarily related to the use of helicopter support services, specialized survey technologies, and dynamite energy sources all of which are utilized in areas with limited access. The sustained increase in these charges during fiscal 2007 was driven by our continued geographic expansion in response to increased exploration activities in the Appalachian Basin, the Rocky Mountains, the Fayetteville Shale, and the Arkoma Basin. We are reimbursed for these charges by our clients.

Operating Costs. Our operating expenses increased 51% from \$125,848,000 in fiscal 2006 to \$190,117,000 in fiscal 2007 primarily due to the full year of service for the twelfth crew fielded in fiscal 2006 and the start-up and ongoing expenses of the three acquisition crews deployed in fiscal 2007. As discussed above, reimbursed charges have a similar impact on operating costs.

General and administrative expenses were 2.4% of revenues in fiscal 2007 as compared to 2.9% of revenues in fiscal 2006. While the ratio of general and administrative expenses to revenue declined in fiscal 2007 due to the increase in revenues, the actual dollar amount increased. The increase of \$1,387,000 from fiscal 2006 to fiscal 2007 reflects ongoing expenses necessary to support expanded field operations.

We recognized \$18,103,000 of depreciation expense in fiscal 2007 as compared to \$13,338,000 in fiscal 2006, reflecting the full year of depreciation expense from our fiscal 2006 capital expenditures. Our depreciation expense is expected to continue to increase in fiscal 2008 as a result of our significant capital expenditures in fiscal 2007.

Our total operating costs for fiscal 2007 were \$214,415,000, an increase of 49% from fiscal 2006 primarily due to the factors described above.

Taxes. Our effective tax rates for fiscal 2007 and 2006 were 38.9% and 37.1%, respectively. The increase in the effective tax rate in fiscal 2007 as compared to fiscal 2006 was primarily a result of changes in tax legislation that impact the Company's tax expense and changes in state tax rates as a result of the varying states in which we operate from year to year.

Liquidity and Capital Resources

Introduction. Our principal source of cash is amounts earned from the seismic data acquisition services we provide to our clients. Our principal uses of cash are the amounts used to provide these services, including expenses related to our operations and acquiring new equipment. Accordingly, our cash position depends (as do our revenues) on the level of demand for our services. Historically, cash generated from our operations along with cash reserves and short-term borrowings from commercial banks have been sufficient to fund our working capital requirements and, to some extent, our capital expenditures.

Table of Contents

Cash Flows. Net cash provided by operating activities was \$50,930,000 for fiscal 2008 and \$51,427,000 for fiscal 2007. These amounts primarily reflect an increase in total revenues resulting from our expanded business and an increase in accounts receivable without a correlating increase in accounts payable. The increase in accounts receivable derives principally from an increase in our trade receivables. This increase in trade receivables is consistent with the growth in our revenues during fiscal 2008, and the number of days that sales remain on account is consistent with fiscal 2007. In addition, accounts receivable contains anticipated insurance proceeds for the equipment lost on March 14, 2008. See discussion of fire in Item 3, Legal Proceedings and Note 10, Commitments and Contingencies to the Financial Statements included in Item 8 Financial Statements and Supplementary Data.

Net cash used in investing activities was \$53,240,000 in fiscal 2008 and \$51,664,000 in fiscal 2007. These results primarily represent capital expenditures in both years, and fiscal 2007 includes activity in the short-term investment portfolio. Capital expenditures were funded primarily with cash generated from operations in both years and, during fiscal 2007, with cash from our short-term investments.

Net cash used by financing activities in fiscal 2008 of \$4,254,000 primarily represents the net decrease on our revolving line of credit loan agreement from a balance at September 30, 2007 of \$5,000,000 to a zero balance at September 30, 2008. Net cash provided by financing activities in fiscal 2007 was \$7,048,000 primarily representing the draw down of \$5,000,000 from our line of credit and proceeds from the exercise of stock options.

Capital Expenditures. For fiscal year 2008, we made capital expenditures of \$52,861,000 in part to complete the fielding of an additional data acquisition crew, expand channel count on existing crews, purchase additional energy source units, and replace two I/O System II MRX recording systems on existing crews with ARAM ARIES recording systems. The Board of Directors has approved an initial fiscal 2009 budget of \$20,000,000 to purchase additional recording channels, make technical improvements in various phases of the Company's operations, and meet maintenance capital requirements. We believe these additions will allow the Company to maintain its competitive position as it responds to client desire for higher resolution subsurface images.

We continually strive to supply our clients with technologically advanced 3-D data acquisition recording services and data processing capabilities. We maintain equipment in and out of service in anticipation of increased future demand for our services.

Capital Resources. Historically, we have primarily relied on cash generated from operations, cash reserves and short-term borrowings from commercial banks to fund our working capital requirements and, to some extent, capital expenditures. From time to time, we have also funded our capital expenditures and other financing needs through public equity offerings.

Our revolving line of credit loan agreement is with Western National Bank. In January 2008, we renewed the agreement for an additional year, and on June 2, 2008, we amended the agreement to increase the borrowing limit to \$40.0 million. The agreement permits us to borrow, repay and reborrow, from time to time until June 2, 2009, up to \$40.0 million. Our obligations under this agreement are secured by a security interest in our accounts receivable, equipment and related collateral. Interest on the facility accrues at an annual rate equal to either the 30-day London Interbank Offered Rate (LIBOR), plus two and one-quarter percent or the Prime Rate, minus three-quarters percent as we direct monthly, subject to an interest rate floor of 4%. Interest on the outstanding amount under the loan agreement is payable monthly. The loan agreement contains customary covenants for credit facilities of this type, including limitations on disposition of assets, mergers and reorganizations. We are also obligated to meet certain financial covenants under the loan agreement, including maintaining specified ratios with respect to cash flow coverage, current assets and liabilities, and debt to tangible net worth. We were in compliance with all covenants as of September 30, 2008 and December 8, 2008. On July 5, 2007, we borrowed \$5.0 million under the prior credit loan agreement for working capital purposes. On March 21, 2008, we borrowed an additional \$5.0 million, and on June 16, 2008, we

borrowed an additional \$10.0 million, in each case, for working capital purposes. As of September 30, 2008, we had repaid the \$20.0 million balance, and no amounts were outstanding as of December 8, 2008.

Table of Contents

The following table summarizes payments due in specific periods related to our contractual obligations with initial terms exceeding one year as of September 30, 2008.

	Total	Payments Due by Period (in 000 s)			
		Less than 1 Year	1-3 Years	3-5 Years	More than 5 Years
Operating lease obligations	\$ 1,778	\$ 569	\$ 1,042	\$ 167	\$

We believe that our capital resources and cash flow from operations are adequate to meet our current operational needs. We believe we will be able to finance our capital requirements including the continued expansion of our capital equipment through cash flow from operations, borrowings under our revolving line of credit and, if necessary, from capital markets offerings. However, our ability to satisfy our working capital requirements and fund future capital requirements will depend principally upon our future operating performance, which is subject to the risks inherent in our business including the demand for our seismic services from clients.

Off-Balance Sheet Arrangements

As of September 30, 2008, we had no off-balance sheet arrangements.

Effect of Inflation

We do not believe that inflation has had a material effect on our business, results of operations or financial condition during the past three fiscal years.

Critical Accounting Policies

The preparation of our financial statements in conformity with generally accepted accounting principles requires us to make certain assumptions and estimates that affect the reported amounts of assets and liabilities at the date of our financial statements and the reported amounts of revenues and expenses during the reporting period. Because of the use of assumptions and estimates inherent in the reporting process, actual results could differ from those estimates.

Revenue Recognition. Our services are provided under cancelable service contracts. These contracts are either turnkey or term agreements. Under both types of agreements, we recognize revenues when revenue is realizable and services are performed. Services are defined as the commencement of data acquisition or processing operations. Revenues are considered realizable when earned according to the terms of the service contracts. Under turnkey agreements, revenue is recognized on a per unit of data acquired rate, as services are performed. Under term agreements, revenue is recognized on a per unit of time worked rate, as services are performed. In the case of a cancelled service contract, we recognize revenue and bill our client for services performed up to the date of cancellation. We also receive reimbursements for certain out-of-pocket expenses under the terms of our service contracts. We record amounts billed to clients in revenue at the gross amount, including out-of-pocket expenses that are reimbursed by the client.

In some instances, we bill clients in advance of the services performed. In those cases, we recognize the liability as deferred revenue.

Allowance for Doubtful Accounts. We prepare our allowance for doubtful accounts receivable based on our review of past-due accounts, our past experience of historical write-offs and our current client base. While the collectibility of outstanding client invoices is continually assessed, the inherent volatility of the energy industry's business cycle can cause swift and unpredictable changes in the financial stability of our clients.

Impairment of Long-Lived Assets. We review long-lived assets for impairment when triggering events occur suggesting deterioration in the assets recoverability or fair value. Recognition of an impairment charge is required if future expected net cash flows are insufficient to recover the carrying value of the asset. Our forecast of future cash flows used to perform impairment analysis includes estimates of future revenues and future gross margins based on our historical results and analysis of future oil and gas prices which is fundamental in assessing demand for our services. If we are unable to achieve these cash flows, an impairment charge would be recorded.

Table of Contents

Depreciable Lives of Property, Plant and Equipment. Our property, plant and equipment are capitalized at historical cost and depreciated over the useful life of the asset. Our estimation of this useful life is based on circumstances that exist in the seismic industry and information available at the time of the purchase of the asset. As circumstances change and new information becomes available, these estimates could change. We depreciate these capitalized items using the straight-line method.

Tax Accounting. We account for our income taxes in accordance with Statement of Financial Accounting Standards No. 109 (SFAS 109), Accounting for Income Taxes, which requires the recognition of amounts of taxes payable or refundable for the current year and an asset and liability approach in recognizing the amount of deferred tax liabilities and assets for the future tax consequences of events that have been recognized in our financial statements or tax returns. We determine deferred taxes by identifying the types and amounts of existing temporary differences, measuring the total deferred tax asset or liability using the applicable tax rate and reducing the deferred tax asset by a valuation allowance if, based on available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized. Our methodology for recording income taxes requires judgment regarding assumptions and the use of estimates, including determining our annual effective tax rate and the valuation of deferred tax assets, which can create a variance between actual results and estimates and could have a material impact on our provision or benefit for income taxes.

Stock-Based Compensation. We account for stock-based compensation awards in accordance with SFAS No. 123(R) (SFAS 123(R)), Share-Based Payment. We measure all employee stock-based compensation awards using a fair value method and recognize compensation cost in our financial statements. We adopted SFAS 123(R) beginning October 1, 2005 for stock-based compensation awards granted after that date and for nonvested awards outstanding at that date using the modified prospective application method. We record compensation expense as operating or general and administrative expense as appropriate in the Statements of Operations on a straight-line basis over the vesting period.

Recently Issued Accounting Pronouncements

In September 2006, the FASB issued SFAS No. 157 (SFAS 157), Fair Value Measurements. SFAS 157 clarifies that fair value is the amount that would be exchanged to sell an asset or transfer a liability in an orderly transaction between market participants. Further, the standard establishes a framework for measuring fair value in generally accepted accounting principles and expands certain disclosures about fair value measurements. SFAS 157 is effective for fiscal years beginning after November 15, 2007. In February 2008, the FASB issued FASB Staff Position 157-2 (FSP 157-2), Effective Date of FASB Statement No. 157, which delays the effective date of SFAS 157 for all non-financial assets and non-financial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually). We do not expect the adoption of SFAS 157 to have a material impact on our financial statements.

In February 2007, the FASB issued SFAS No. 159 (SFAS 159), The Fair Value Option for Financial Assets and Financial Liabilities. SFAS 159 provides companies with an option to report selected financial assets and liabilities at fair value. SFAS 159 is effective for fiscal years beginning after November 15, 2007. We do not expect the adoption of SFAS 159 to have a material impact on our financial statements.

In May 2008, the FASB issued SFAS No. 162 (SFAS 162), The Hierarchy of Generally Accepted Accounting Principles. Under SFAS 162, the GAAP hierarchy will now reside in the accounting literature established by the FASB. SFAS 162 identifies the sources of accounting principles and the framework for selecting the principles used in the preparation of financial statements in conformity with GAAP. SFAS 162 is effective 60 days following the SEC's approval of the Public Accounting Oversight Board Auditing amendments to AU Section 411, The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles. We do not expect the adoption of SFAS 162 to have a material impact on our financial statements.

Item 7A. *QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK*

Our primary sources of market risk include fluctuations in commodity prices which affect demand for and pricing of our services and interest rate fluctuations. As of June 16, 2008, we had borrowed \$20.0 million under our revolving line of credit loan agreement with Western National Bank. Through January 18, 2008, interest payable

Table of Contents

under the revolving line of credit was variable based upon the then current prime rate. Beginning on January 19, 2008, interest on the outstanding amount under the line of credit loan agreement is payable monthly at an annual rate equal to either the 30-day London Interbank Offered Rate (LIBOR), plus two and one-quarter percent or the Prime Rate, minus three-quarters percent at our direction, subject to an interest rate floor of 4%. As of September 30, 2008, we had repaid the \$20.0 million balance, and no amounts were outstanding as of December 8, 2008.

At September 30, 2008, we did not have any short-term investments. We have not entered into any hedge arrangements, commodity swap agreements, commodity futures, options or other derivative financial instruments. We do not currently conduct business internationally, so we are not generally subject to foreign currency exchange rate risk.

Item 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

The information required by this item appears on pages F-1 through F-20 hereof and are incorporated herein by reference.

Item 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

Item 9A. CONTROLS AND PROCEDURES

Management's Evaluation of Disclosure Controls and Procedures

We carried out an evaluation, under the supervision and with the participation of our management, including our principal executive and principal financial officers, of the effectiveness of our disclosure controls and procedures pursuant to Rule 13a-15 under the Securities Exchange Act of 1934 as of the end of the period covered by this report. Based upon that evaluation, our President and Chief Executive Officer and our Executive Vice President, Secretary and Chief Financial Officer concluded that, as of September 30, 2008, our disclosure controls and procedures were effective, in all material respects, with regard to the recording, processing, summarizing and reporting, within the time periods specified in the SEC's rules and forms, for information required to be disclosed by us in the reports that we file or submit under the Exchange Act. Our disclosure controls and procedures include controls and procedures designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is accumulated and communicated to our management, including our President and Chief Executive Officer and our Executive Vice President, Secretary and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rule 13a-15(f) under the Securities Exchange Act of 1934. Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. Under the supervision and with the participation of management, including our Chief Executive Officer and Chief Financial Officer, we evaluated the effectiveness of our internal controls over financial reporting as of

September 30, 2008 using the criteria set forth in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, we have concluded that, as of September 30, 2008, our internal control over financial reporting was effective. Our internal control over financial reporting as of September 30, 2008, has been audited by KPMG LLP, the independent registered public accounting firm who also audited our financial statements. Their attestation report appears on page F-3.

Table of Contents

Changes in Internal Control over Financial Reporting

There have not been any changes in our internal control over financial reporting (as defined in Exchange Act Rule 13a-15(f) of the Securities Exchange Act of 1934) during the quarter ending September 30, 2008 that have materially affected or are reasonably likely to materially affect our internal control over financial reporting.

Item 9B. *OTHER INFORMATION*

None.

Part III

Item 10. *DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE*

The information required by Item 10 is incorporated by reference to our definitive proxy statement for our Annual Meeting of Stockholders to be held on January 27, 2009, which we expect to file with the Securities and Exchange Commission within 120 days after September 30, 2008. Certain information with respect to our executive officers is set forth under the caption Executive Officers of the Registrant in Part I of this report. Our code of ethics (as defined in Item 406 of Regulation S-K) was adopted by our Board of Directors on May 25, 2004. The Code of Business Conduct and Ethics applies to our directors, officers and employees, including our principal executive officer, principal financial officer and principal accounting officer. Our Code of Business Conduct and Ethics is posted on our website at <http://www.dawson3d.com> in the Corporate Governance area of the Investor Relations section. Changes to and waivers granted with respect to our Code of Business Conduct and Ethics related to officers identified above, and our other executive officers and directors that we are required to disclose pursuant to applicable rules and regulations of the SEC will also be posted on our website.

Item 11. *EXECUTIVE COMPENSATION*

The information required by Item 11 is incorporated by reference to our definitive proxy statement for our Annual Meeting of Stockholders to be held on January 27, 2009, which we expect to file with the Securities and Exchange Commission within 120 days after September 30, 2008.

Item 12. *SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS*

The information required with respect to our equity compensation plans is set forth in Item 5 of this Form 10-K. Other information required by Item 12 is incorporated by reference to our definitive proxy statement for our Annual Meeting of Stockholders to be held on January 27, 2009, which we expect to file with the Securities and Exchange Commission within 120 days after September 30, 2008.

Item 13. *CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS AND DIRECTOR INDEPENDENCE*

The information required by Item 13 is incorporated by reference to our definitive proxy statement for our Annual Meeting of Stockholders to be held on January 27, 2009, which we expect to file with the Securities and Exchange Commission within 120 days after September 30, 2008.

Item 14. *PRINCIPAL ACCOUNTING FEES AND SERVICES*

The information required by Item 14 is incorporated by reference to our definitive proxy statement for our Annual Meeting of Stockholders to be held on January 27, 2009, which we expect to file with the Securities and Exchange Commission within 120 days after September 30, 2008.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders
Dawson Geophysical Company:

We have audited the accompanying balance sheets of Dawson Geophysical Company (the Company) as of September 30, 2008 and 2007, and the related statements of operations, stockholders' equity and other comprehensive income, and cash flows for the years in the three-year period ended September 30, 2008. In connection with our audits of the financial statements, we also have audited financial statement Schedule II. These financial statements and financial schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Dawson Geophysical Company as of September 30, 2008 and 2007, and the results of its operations and its cash flows for the years in the three-year period ended September 30, 2008, in conformity with U.S. generally accepted accounting principles. Also in our opinion, the related financial statement schedule, when considered in relation to the basic financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the financial statements, the Company adopted the provisions of the Financial Accounting Standards Board's Statement of Financial Accounting Standards No. 123 (revised 2004), *Share-Based Payment* in fiscal year 2006.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Dawson Geophysical Company's internal control over financial reporting as of September 30, 2008, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated December 9, 2008 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders

Dawson Geophysical Company:

We have audited Dawson Geophysical Company's internal control over financial reporting as of September 30, 2008, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Dawson Geophysical Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures, as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Dawson Geophysical Company maintained, in all material respects, effective internal control over financial reporting as of September 30, 2008, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the balance sheets of Dawson Geophysical Company as of September 30, 2008 and 2007, and the related statements of operations, stockholders' equity and other comprehensive income, and cash flows for the years in the three-year period ended September 30, 2008, and our report dated December 9, 2008, expressed an unqualified opinion on those financial statements.

Table of Contents

DAWSON GEOPHYSICAL COMPANY
NOTES TO FINANCIAL STATEMENTS

1. Summary of Significant Accounting Policies

Organization and Nature of Operations

Founded in 1952, the Company acquires and processes 2-D, 3-D and multi-component seismic data for its clients, ranging from major oil and gas companies to independent oil and gas operators as well as providers of multi-client data libraries.

Cash Equivalents

For purposes of the financial statements, the Company considers demand deposits, certificates of deposit, overnight investments, money market funds and all highly liquid debt instruments purchased with an initial maturity of three months or less to be cash equivalents.

Short-Term Investments

The Company accounts for its short-term investments in accordance with Statement of Financial Accounting Standards (SFAS) No. 115 (SFAS No. 115), Accounting for Certain Investments in Debt and Equity Securities. In accordance with SFAS No. 115, the Company classifies its investments consisting of U.S. Treasury Securities as available-for-sale and records the net unrealized holding gains and losses as accumulated comprehensive income in stockholders' equity. The cost of short-term investments sold is based on the specific identification method.

Fair Value of Financial Instruments

The carrying amounts for cash and cash equivalents, accounts receivable, other current assets, accounts payable and other current liabilities approximate their fair values based on their short-term nature. The fair value of investments is based on quoted market prices.

Concentrations of Credit Risk

Financial instruments which potentially expose the Company to concentrations of credit risk, as defined by SFAS No. 105, Disclosure of Information About Financial Instruments with Off-Balance Sheet Risk and Financial Instruments with Concentrations of Credit Risk, at any given time may consist of cash and cash equivalents, money market funds and overnight investment accounts, short-term investments and trade accounts receivable. At September 30, 2008 and 2007, the Company had deposits in domestic banks in excess of federally insured limits. Management believes the credit risk associated with these deposits is minimal. Money market funds seek to preserve the value of the investment, but it is possible to lose money investing in these funds. The Company invests funds overnight under a repurchase agreement with its bank which is collateralized by securities of the United States Federal agencies. The Company invests primarily in short-term U.S. Treasury Securities which it believes are a low risk investment. The Company's sales are to clients whose activities relate to oil and natural gas exploration and production. The Company generally extends unsecured credit to these clients; therefore, collection of receivables may be affected by the economy surrounding the oil and natural gas industry. The Company closely monitors extensions of credit and may negotiate payment terms that mitigate risk. The Company's analysis of historical collections of accounts receivable and other relevant data does not substantiate an increased allowance for doubtful accounts. At September 30, 2008, sales to the Company's two largest clients represented 56% of its revenues and 54% of its

revenues net of third-party charges, as compared to 56% and 50%, respectively, at September 30, 2007. At September 30, 2006, sales to the Company's two largest clients represented 35% of its revenues. The remaining balance of the Company's fiscal 2008 revenues was derived from varied clients and none represented 10% or more of its fiscal 2008 revenues.

Table of Contents

DAWSON GEOPHYSICAL COMPANY

NOTES TO FINANCIAL STATEMENTS (Continued)

Property, Plant and Equipment

Property, plant and equipment are capitalized at historical cost and depreciated over the useful life of the asset. Management's estimation of this useful life is based on circumstances that exist in the seismic industry and information available at the time of the purchase of the asset. As circumstances change and new information becomes available, these estimates could change.

Depreciation is computed using the straight-line method. When assets are retired or otherwise disposed of, the cost and related accumulated depreciation are removed from the balance sheet, and any resulting gain or loss is reflected in the results of operations for the period.

Impairment of Long-Lived Assets

Long-lived assets are reviewed for impairment when triggering events occur suggesting a deterioration in the assets recoverability or fair value. Recognition of an impairment charge is required if future expected net cash flows are insufficient to recover the carrying value of the asset. Management's forecast of future cash flow used to perform impairment analysis includes estimates of future revenues and future gross margins based on the Company's historical results and analysis of future oil and natural gas prices which is fundamental in assessing demand for the Company's services. No impairment charges were recognized in the Statements of Operations for the years ended September 30, 2008, 2007 or 2006.

Revenue Recognition

Services are provided under cancelable service contracts. These contracts are either turnkey or term agreements. Under both types of agreements, the Company recognizes revenues when revenue is realizable and services have been performed. Services are defined as the commencement of data acquisition or processing operations. Revenues are considered realizable when earned according to the terms of the service contracts. Under turnkey agreements, revenue is recognized on a per unit of data acquired rate as services are performed. Under term agreements, revenue is recognized on a per unit of time worked rate as services are performed. In the case of a cancelled service contract, revenue is recognized and the customer is billed for services performed up to the date of cancellation.

The Company receives reimbursements for certain out-of-pocket expenses under the terms of the service contracts. Amounts billed to clients are recorded in revenue at the gross amount including out-of-pocket expenses that are reimbursed by the client.

In some instances, customers are billed in advance of services performed. In those cases, the Company recognizes the liability as deferred revenue.

Allowance for Doubtful Accounts

Management prepares its allowance for doubtful accounts receivable based on its review of past-due accounts, its past experience of historical write-offs and its current client base. While the collectibility of outstanding client invoices is continually assessed, the inherent volatility of the energy industry's business cycle can cause swift and unpredictable changes in the financial stability of the Company's clients.

Tax Accounting

The Company accounts for income taxes in accordance with SFAS No. 109, Accounting for Income Taxes, which requires the recognition of amounts of taxes payable or refundable for the current year and an asset and liability approach in recognizing the amount of deferred tax liabilities and assets for the future tax consequences of events that have been recognized in the Company's financial statements or tax returns. Management determines deferred taxes by identifying the types and amounts of existing temporary differences, measuring the total deferred

F-9

Table of Contents

DAWSON GEOPHYSICAL COMPANY

NOTES TO FINANCIAL STATEMENTS (Continued)

tax asset or liability using the applicable tax rate and reducing the deferred tax asset by a valuation allowance if, based on available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized. Management's methodology for recording income taxes requires judgment regarding assumptions and the use of estimates, including determining the annual effective tax rate and the valuation of deferred tax assets, which can create variances between actual results and estimates and could have a material impact on the Company's provision or benefit for income taxes.

Use of Estimates in the Preparation of Financial Statements

Preparation of the accompanying financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Stock-Based Compensation

The Company accounts for stock-based compensation in accordance with SFAS 123(R) (SFAS 123(R)), Share-Based Payment, which requires companies to measure all employee stock-based compensation awards, including stock options and restricted stock, using a fair value method and recognize compensation cost, net of forfeitures, in its financial statements for all awards granted after that date and for nonvested awards outstanding at that date using the modified prospective application method. The Company recognizes the fair value of stock-based compensation awards as operating or general and administrative expense as appropriate in the Statements of Operations on a straight-line basis over the vesting period.

The Company adopted the 2000 Incentive Stock Plan during fiscal 1999 (the 2000 Plan), which provides options to purchase 500,000 shares of authorized but unissued common stock of the Company. The option price is the market value of the Company's common stock at date of grant. Options are exercisable 25% annually from the date of the grant and the options expire five years from the date of grant. The 2000 Plan provides that 50,000 of the 500,000 shares of authorized but unissued common stock may be awarded to officers, directors and employees of the Company for the purpose of additional compensation.

In fiscal 2004, the Company adopted the 2004 Incentive Stock Plan (the 2004 Plan) which provides 375,000 shares of authorized but unissued common stock of the Company. The 2004 Plan operates like the 2000 Plan except that of the 375,000 shares, up to 125,000 shares may be awarded to officers, directors, and employees of the Company and up to 125,000 shares may be awarded with restrictions for the purpose of additional compensation.

Although shares are available under the 2000 and 2004 Plans, the Company does not intend to issue shares from these plans in the future.

In fiscal 2007, the Company adopted the Dawson Geophysical Company 2006 Stock and Performance Incentive Plan (the Plan). The Plan provides 750,000 shares of authorized but unissued common stock of the Company which may be awarded to officers, directors, employees and consultants of the Company in various forms including options, grants, restricted stock grants and others. Stock option grant prices awarded under the Plan may not be less than the fair market value of the common stock subject to such option on the grant date, and the term of stock options shall extend

no more than ten years after the grant date. The Plan was approved by shareholders at the Company's Annual Shareholders Meeting on January 23, 2007.

Incentive Stock Options:

The Company estimates the fair value of each stock option on the date of grant using the Black-Scholes option pricing model. The expected volatility is based on historical volatility over the expected vesting term of 48 months. As the Company has not historically declared dividends, the dividend yield used in the calculation is zero. Actual

F-10

Table of Contents**DAWSON GEOPHYSICAL COMPANY****NOTES TO FINANCIAL STATEMENTS (Continued)**

value realized, if any, is dependent on the future performance of the Company's common stock and overall stock market conditions. There is no assurance the value realized by an optionee will be at or near the value estimated by the Black-Scholes model.

A summary of the Company's employee stock options as of September 2008, 2007 and 2006, and changes during the years ended on those dates is presented below.

	Number of Optioned Shares	Weighted Average Exercise Price	Weighted Average Remaining Contractual Term in Years	Aggregate Intrinsic Value (\$000)
Balance as of September 30, 2005	224,500	\$ 8.87	2.65	\$ 4,803
Granted		\$		
Exercised	(46,750)	\$ 7.90		
Expired	(6,500)	\$ 9.27		
Balance as of September 30, 2006	171,250	\$ 9.12	2.22	\$ 3,535
Granted		\$		
Exercised	(106,250)	\$ 6.93		
Forfeited	(6,500)	\$ 15.82		
Balance as of September 30, 2007	58,500	\$ 12.35	1.60	\$ 3,875
Granted		\$		
Exercised	(35,250)	\$ 8.68		
Balance as of September 30, 2008	23,250	\$ 17.91	1.08	\$ 650
Exercisable as of September 30, 2008	15,000	\$ 17.91	1.08	\$ 420

No options were granted during fiscal years 2008, 2007 and 2006. The total intrinsic value of options exercised during fiscal 2008, 2007 and 2006 was \$1,812,000, \$4,650,000 and \$1,029,000, respectively. The total fair value of options vested during fiscal 2008, 2007 and 2006 was \$201,000, \$367,000 and \$549,000, respectively.

A summary of the status of the Company's nonvested shares as of September 30, 2008 and changes during the fiscal year ended September 30, 2008 is presented below.

	Number of Nonvested Share Awards		Weighted Average Grant Date Fair Value
Nonvested Shares Outstanding September 30, 2007	24,000	\$	14.52
Granted			
Vested	(15,750)		12.74
Forfeited			
Nonvested Shares Outstanding September 30, 2008	8,250	\$	17.91

Outstanding options at September 30, 2008 expire November 2009 and have an exercise price of \$17.91. As of September 30, 2008 there was approximately \$7,000 of unrecognized compensation cost related to nonvested stock option awards to be recognized in October 2008.

Stock options issued under the Company's 2004 Plan are incentive stock options. No tax deduction is recorded when options are awarded. If an exercise and sale of vested options results in a disqualifying disposition, a tax deduction for the Company occurs. For the years ended September 30, 2008 and 2007 excess tax benefits from

Table of Contents**DAWSON GEOPHYSICAL COMPANY****NOTES TO FINANCIAL STATEMENTS (Continued)**

disqualifying dispositions of options of \$440,000 and \$1,312,000, respectively, were reflected in both cash flows from operating activities and cash flows from financing activities on the Statements of Cash Flows.

Cash received from option exercises under all share-based payment arrangements during the years ended September 30, 2008 and 2007 was \$306,000 and \$736,000, respectively.

The Company recognized compensation expense of \$78,000, \$83,000 and \$289,000 in fiscal 2008, 2007 and 2006, respectively, associated with stock option awards. This amount is included in wages in the Statements of Operations.

Stock Awards:

The Company granted 5,500 restricted shares during the second quarter of fiscal 2008 and 33,000 restricted shares during the third quarter fiscal 2008, each from the 2006 Plan. The fair value of the restricted stock granted equals the market price on the grant date and vests after three years.

	Number of Restricted Share Awards		Weighted Average Grant Date Fair Value
Nonvested Restricted Shares Outstanding September 30, 2007	56,000	\$	27.05
Granted	38,500	\$	67.25
Nonvested Restricted Shares Outstanding September 30, 2008	94,500	\$	43.43

The Company's tax benefit with regards to restricted stock awards is consistent with the tax election of the recipient of the award. No elections under IRC Section 83(b) have been made for the restricted stock awards granted by the Company. As a result, the compensation expense recorded for restricted stock generated in a deferred tax asset for the Company equal to the tax effect of the amount of compensation expense recorded.

The Company recognized compensation expense of \$758,000 in fiscal 2008 related to restricted stock awards. This amount is included in wages in the Statements of Operations. As of September 30, 2008 there was approximately \$2,773,000 of unrecognized compensation cost related to nonvested restricted stock awards granted. The cost is expected to be recognized over 1.7 years.

The Company granted 3,000 shares with immediate vesting to outside directors in each of the first quarters of fiscal 2008, 2007 and 2006 as compensation. The grant date fair value equaled \$69.64, \$39.77 and \$31.65 in each quarter, respectively. The Company granted 2,000 shares with immediate vesting to employees as compensation in the second quarter of fiscal 2008. The grant date fair value equaled \$55.22. The Company granted 500 and 1,000 shares with immediate vesting to employees as compensation during the third quarter of fiscal 2008. The grant date fair value equaled \$69.22 and \$70.46, respectively. No stock awards were granted during the remaining periods of fiscal 2008, 2007 and 2006. The Company recognized expense of \$423,000, \$119,000 and \$353,000 in fiscal 2008, 2007 and

2006, respectively, as well as the related tax benefit associated with these awards in fiscal years ended September 30, 2008, 2007 and 2006.

F-12

Table of Contents**DAWSON GEOPHYSICAL COMPANY****NOTES TO FINANCIAL STATEMENTS (Continued)****2. Property, Plant and Equipment**

Property, plant and equipment, together with annual depreciation rates, consist of the following:

	September 30,		
	2008	2007	Useful Lives
Land, building and other	\$ 5,350,000	\$ 4,435,000	3 to 40 years
Recording equipment	160,516,000	141,648,000	5 to 10 years
Vibrator energy sources	58,750,000	39,900,000	10 to 15 years
Vehicles	25,713,000	21,059,000	2 to 10 years
Other(a)	190,000	385,000	
	250,519,000	207,427,000	
Less accumulated depreciation	(103,180,000)	(84,655,000)	
Net property, plant and equipment	\$ 147,339,000	\$ 122,772,000	

(a) Other represents accumulated costs associated with equipment fabrication and modification not yet completed.

3. Other Current Liabilities

Other current liabilities consist of the following at September 30, 2008 and 2007:

	September 30,	
	2008	2007
Accrued self insurance reserves	\$ 6,704,000	\$ 6,373,000
Accrued bonus and profit sharing	3,855,000	3,078,000
Income taxes payable	1,262,000	2,314,000
Accrued payables associated with fire	794,000	
Other accrued expenses and current liabilities	2,254,000	2,498,000
Total other current liabilities	\$ 14,869,000	\$ 14,263,000

4. Debt

The Company's revolving line of credit loan agreement is with Western National Bank. In January 2008, the Company renewed the agreement for an additional year, and on June 2, 2008, the agreement was amended to increase the borrowing limit to \$40.0 million. The agreement permits the Company to borrow, repay and reborrow, from time to

time until June 2, 2009, up to \$40.0 million. The Company's obligations under this agreement are secured by a security interest in its accounts receivable, equipment and related collateral. Interest on the facility accrues at an annual rate equal to either the 30-day London Interbank Offered Rate (LIBOR), plus two and one-quarter percent or the Prime Rate, minus three-quarters percent as the Company directs monthly, subject to an interest rate floor of 4%. Interest on the outstanding amount under the loan agreement is payable monthly. The loan agreement contains customary covenants for credit facilities of this type, including limitations on disposition of assets, mergers and reorganizations. The Company is also obligated to meet certain financial covenants under the loan agreement, including maintaining specified ratios with respect to cash flow coverage, current assets and liabilities, and debt to tangible net worth. The Company was in compliance with all covenants as of September 30, 2008 and December 8, 2008. On July 5, 2007, the Company borrowed \$5.0 million under the prior credit loan agreement for working capital purposes. On March 21, 2008, the Company borrowed an additional \$5.0 million, and on June 16, 2008, it borrowed an additional \$10.0 million, in each case, for working capital purposes. As of September 30, 2008, the Company had repaid the \$20.0 million balance, and no amounts are outstanding as of December 8, 2008.

Table of Contents**DAWSON GEOPHYSICAL COMPANY****NOTES TO FINANCIAL STATEMENTS (Continued)****5. Employee Benefit Plans**

The Company provides a 401(k) plan as part of its employee benefits package in order to retain quality personnel. During 2008 and 2007, the Company elected to match 100% of the employee contributions up to a maximum of 6% of the participant's gross salary. During 2006, the Company elected to match 100% of employee contributions up to a maximum of 5% of the participant's gross salary. The Company's matching contributions for fiscal 2008, 2007 and 2006 were approximately \$1,117,000, \$912,000 and \$724,000, respectively.

6. Advertising Costs

Advertising costs are charged to expense as incurred. Advertising costs totaled \$288,000, \$292,000, and \$136,000 during the fiscal years ended September 30, 2008, 2007 and 2006, respectively.

7. Income Taxes

The Company recorded income tax expense in the current year of \$21,400,000 as compared to \$17,300,000 in 2007. The increase in the provision for 2008 from 2007 is primarily a result of a substantial increase in income before income taxes resulting in increased federal and state income taxes. The Company fully utilized its federal alternative minimum tax credits during 2007.

Income tax expense from continuing operations:

	Year Ended September 30,		
	2008	2007	2006
Current Federal	\$ 16,082,000	\$ 11,778,000	\$ 3,935,000
Current State	1,752,000	2,128,000	951,000
Deferred Federal	3,296,000	3,280,000	4,599,000
Deferred State	270,000	114,000	(127,000)
Total	\$ 21,400,000	\$ 17,300,000	\$ 9,358,000

The income tax provision differs from the amount computed by applying the statutory federal income tax rate to income from continuing operations before income taxes as follows:

	Year Ended September 30,		
	2008	2007	2006
Tax expense computed at statutory rates	\$ 19,743,000	\$ 15,560,000	\$ 8,573,000
Change in valuation allowance	(18,000)	(2,000)	90,000
State income tax	1,270,000	1,505,000	569,000

Edgar Filing: DAWSON GEOPHYSICAL CO - Form 10-K

Other	405,000	237,000	126,000
Income tax expense	\$ 21,400,000	\$ 17,300,000	\$ 9,358,000

Noncurrent portion of net deferred tax asset/liability	(13,128,000)	(9,381,000)
Total net deferred tax liability	\$ (12,255,000)	\$ (8,688,000)

At September 30, 2008, substantially all of the valuation allowance of \$70,000 was related to the Company's deferred tax assets for capital loss carryforwards that are deemed more likely than not realizable in the foreseeable future.

In July 2006, the FASB issued Interpretation No. 48 (FIN 48), Accounting for Uncertainty in Income Taxes—an interpretation of FASB Statement No. 109, which became effective for the Company on October 1, 2007. FIN 48 prescribes a recognition threshold and a measurement attribute for the financial statement recognition and measurement of tax positions taken or expected to be taken in a tax return. For those benefits to be recognized, a tax position must be more likely than not to be sustained upon re-examination by taxing authorities. The amount recognized is measured as the largest amount of benefit that is greater than 50% likely of being realized upon ultimate settlement. As a result of the adoption of FIN 48, the Company recorded a liability of approximately \$208,000, which was accounted for as a reduction to retained earnings as of October 1, 2007. The liability included \$137,000 in taxes and \$71,000 in penalties and interest.

The following presents a roll forward of the Company's unrecognized tax benefits:

	Unrecognized Benefits
Balance as of October 1, 2007	\$ 137,000
Increase (decrease) in prior year tax positions	
Increase (decrease) in current year tax positions	
Settlement with taxing authorities	
Expiration of statutes of limitations	(2,000)
Balance as of September 30, 2008	\$ 135,000

F-15

Table of Contents**DAWSON GEOPHYSICAL COMPANY****NOTES TO FINANCIAL STATEMENTS (Continued)**

As of September 30, 2008 the Company has recognized \$228,000 of liabilities for unrecognized tax benefits of which \$93,000 related to penalties and interest. The Company expects approximately \$83,000 of the liabilities for unrecognized tax benefits to settle or lapse in the statutes of limitations by December 31, 2008.

Interest and penalty costs related to income taxes are classified as income tax expense. The tax years generally subject to future examination by tax authorities are for years ending September 30, 2004 and after. While it is expected that the amount of unrecognized tax benefits will change in the next twelve months, the Company does not expect any change to have a significant impact on its results of operations. The recognition of unrecognized tax benefits would have an immaterial effect on the effective tax rate.

8. Net Income per Common Share

The Company accounts for earnings per share in accordance with SFAS No. 128, Earnings per Share. Basic net income per share is computed by dividing the net income for the period by the weighted average number of common shares outstanding during the period. Diluted net income per share is computed by dividing the net income for the period by the weighted average number of common shares and common share equivalents outstanding during the period.

The following table sets forth the computation of basic and diluted net income per common share:

	2008	2007	2006
<i>Numerator:</i>			
Net income and numerator for basic and diluted net income per common share: income available to common shareholders	\$ 35,007,000	\$ 27,158,000	\$ 15,855,000
<i>Denominator:</i>			
Denominator for basic net income per common share-weighted average common shares	7,669,124	7,601,889	7,518,372
Effect of dilutive securities-employee stock options and restricted stock grants	59,527	67,573	81,183
Denominator for diluted net income per common share-adjusted weighted average common shares and assumed conversions	7,728,651	7,669,462	7,599,555
Net income per common share	\$ 4.57	\$ 3.57	\$ 2.11
Net income per common share-assuming dilution	\$ 4.53	\$ 3.54	\$ 2.09

9. Major Customers

The Company operates in only one business segment, contract seismic data acquisition and processing services. The major customers in 2008, 2007 and 2006 have varied. Sales to these customers, as a percentage of operating revenues that exceeded 10%, were as follows:

	2008	2007	2006
A	36%	49%	24%
B	20%		
C			11%

Although 36% and 20% of the Company's fiscal 2008 revenues were derived from two clients, the Company believes that the relationships are well founded for continued contractual commitments for the foreseeable future in multiple producing basins across the lower 48 states. However, the Company anticipates a reduction in sales in

Table of Contents**DAWSON GEOPHYSICAL COMPANY****NOTES TO FINANCIAL STATEMENTS (Continued)**

fiscal 2009 to these two clients. The Company's client C in the table above continues to be a client and acts as an agent for other entities that are the actual purchasers of the Company's services.

10. Commitments and Contingencies

On March 14, 2008, a wildfire in West Texas burned a remote area in which one of the Company's data acquisition crews was operating. The fire destroyed approximately \$2.9 million net book value of the Company's equipment, all of which was covered by the Company's liability insurance, net of the deductible. In addition to the loss of equipment, a number of landowners in the fire area suffered damage to their grazing lands, livestock, fences and other improvements. The Company is currently repairing damage incurred by such landowners as a result of the fire. The Company currently estimates the likely amount of the landowner damages will be less than \$1.5 million. The Company believes any damages paid will be covered by the Company's liability insurance.

From time to time, the Company is a party to various legal proceedings arising in the ordinary course of business. Although the Company cannot predict the outcomes of any such legal proceedings, management believes that the resolution of pending legal actions will not have a material adverse effect on the Company's financial condition, results of operations or liquidity as the Company believes it is adequately indemnified and insured.

On November 21, 2008, the Company received written notice dated November 14, 2008 from a client disputing approximately \$1.4 million in charges payable for seismic work performed by the Company. The Company believes that the disputed charges are owed to the Company, and the Company intends to seek full payment from the client.

The Company experiences contractual disputes with its clients from time to time regarding the payment of invoices or other matters. While the Company seeks to minimize these disputes and maintain good relations with its clients, the Company has in the past, and may in the future, experience disputes that could affect its revenues and results of operations in any period.

The Company has non-cancelable operating leases for office space in Midland, Houston, Denver, Oklahoma City and Lyon Township, Michigan.

The following table summarizes payments due in specific periods related to the Company's contractual obligations with initial terms exceeding one year as of September 30, 2008.

	Total	Payments Due by Period (in 000's)			More than 5 Years
		Less than 1 Year	1-3 Years	3-5 Years	
Operating lease obligations	\$ 1,778	\$ 569	\$ 1,042	\$ 167	\$

Some of the Company's operating leases contain predetermined fixed increases of the minimum rental rate during the initial lease term. For these leases, the Company recognizes the related expense on a straight line basis and records the difference between the amount charged to expense and the rent paid as deferred rent. Rental expense under the Company's operating leases with initial terms exceeding one year was \$528,000, \$432,000 and \$274,000 for fiscal 2008, 2007 and 2006, respectively.

As of September 30, 2008, the Company recognized unused letters of credit totaling \$3,580,000. The Company's letters of credit principally back obligations associated with the Company's self-insured retention on workers compensation claims.

11. Rights Agreement

On July 13, 1999, the Board of Directors of the Company authorized and declared a dividend to the holders of record on July 23, 1999 of one Right (a Right) for each outstanding share of the Company's common stock. When exercisable, each Right will entitle the holder to purchase one one-hundredth of a share of a Series A Junior

Table of Contents

DAWSON GEOPHYSICAL COMPANY

NOTES TO FINANCIAL STATEMENTS (Continued)

Participating Preferred Stock, par value \$1.00 per share, of the Company (the Preferred Shares) at an exercise price of \$50.00 per Right. The rights are not currently exercisable and will become exercisable only if a person or group acquires beneficial ownership of 20% or more of the Company s outstanding common stock or announces a tender offer or exchange offer, the consummating of which would result in attaining the triggering percentage. The Rights are subject to redemption by the Company for \$.01 per Right at any time prior to the tenth day after the first public announcement of a triggering acquisition.

If the Company is acquired in a merger or other business combination transaction after a person has acquired beneficial ownership of 20% or more of the Company s common stock, each Right will entitle its holder to purchase, at the Right s then current exercise price, a number of the acquired Company s shares of common stock having a market value of two times such price. In addition, if a person or group acquires beneficial ownership of 20% or more of the Company s common stock, each Right will entitle its holder (other than the acquiring person or group) to purchase, at the Right s then current exercise price, a number of the Company s shares of common stock having a market value of two times the exercise price.

Subsequent to the acquisition by a person or group of beneficial ownership of 20% or more of the Company s common stock and prior to the acquisition of beneficial ownership of 50% or more of the Company s common stock, the Board of Directors of the Company may exchange the Rights (other than Rights owned by such acquiring person or group, which will have become null and void and nontransferable), in whole or in part, at an exchange ratio of one share of the Company s common stock (or one one-hundredth of a Preferred Share) per Right.

The Rights dividend distribution was made on July 23, 1999, payable to shareholders of record at the close of business on that date. The Rights will expire on July 23, 2009.

12. Recently Issued Accounting Pronouncements

In September 2006, the FASB issued SFAS No. 157 (SFAS 157), Fair Value Measurements. SFAS 157 clarifies that fair value is the amount that would be exchanged to sell an asset or transfer a liability in an orderly transaction between market participants. Further, the standard establishes a framework for measuring fair value in generally accepted accounting principles and expands certain disclosures about fair value measurements. SFAS 157 is effective for fiscal years beginning after November 15, 2007. In February 2008, the FASB issued FASB Staff Position 157-2 (FSP 157-2), Effective Date of FASB Statement No. 157, which delays the effective date of SFAS 157 for all non-financial assets and non-financial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually). The Company does not expect the adoption of SFAS 157 to have a material impact on its financial statements.

In February 2007, the FASB issued SFAS No. 159 (SFAS 159), The Fair Value Option for Financial Assets and Financial Liabilities. SFAS 159 provides companies with an option to report selected financial assets and liabilities at fair value. SFAS 159 is effective for fiscal years beginning after November 15, 2007. The Company does not expect the adoption of SFAS 159 to have a material impact on its financial statements.

In May 2008, the FASB issued SFAS No. 162 (SFAS 162), The Hierarchy of Generally Accepted Accounting Principles. Under SFAS 162, the GAAP hierarchy will now reside in the accounting literature established by the FASB. SFAS 162 identifies the sources of accounting principles and the framework for selecting the principles used

in the preparation of financial statements in conformity with GAAP. SFAS 162 is effective 60 days following the SEC's approval of the Public Accounting Oversight Board Auditing amendments to AU Section 411, The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles. The Company does not expect the adoption of SFAS 162 to have a material impact on its financial statements.

13. Subsequent Events

The Company received written notice from a client disputing outstanding receivables on November 21, 2008. See Note 10, Commitments and Contingencies, for additional information.
