AMARIN CORPORATION ANNOUNCES ADDITIONAL POSITIVE CLINICAL DATA
FOR MIRAXION(TM) TO TREAT UNRESPONSIVE DEPRESSION

-- Consistent data in three Phase IIa clinical trials in
depression patients with melancholic characteristics --

LONDON, United Kingdom, March 15, 2005 - Amarin Corporation plc (NASDAQSC:
AMRN) today announced positive data analysis from a third exploratory phase
IIa clinical trial using Miraxion to treat depression. Miraxion was used

Edgar Filing: AMARIN CORP PLC\UK - Form 6-K

as adjunct therapy (with either SSRI's or tricyclics) in 115 patients with treatment-unresponsive depression in a 12-week double blind, placebo controlled clinical trial. The Hamilton Depression Rating Scale (HDRS) was used as the primary efficacy measure. Although in the whole group Miraxion did not show a significant difference over placebo, an exploratory analysis demonstrated significant superiority ($p < 0.05$) in the subgroup of depression patients ($n = 70$) with melancholic characteristics using a repeated measurements design.

This sub-group of depression patients was defined by using select criteria from DSM-IV (Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition) which is the main diagnostic reference of Mental Health professionals in the United States of America, published by the American Psychiatric Association, Washington D.C. Identical methodology was used to identify melancholic depression patients in the previously announced data analysis from the 77 patient monotherapy trial and the 70 patient adjunct therapy depression trial. The data from all three trials are consistent and show a significant clinical benefit using Miraxion in patients with depression with melancholic characteristics.

On 12th January 2005, Amarin announced data from a monotherapy clinical trial using Miraxion alone to treat depression patients. The monotherapy trial included 77 patients, of whom 39 patients were identified with melancholic depression characteristics. In this group, statistical significance ($p =$
