## **Oil and gas discovery in the Gulf of Mexico**

Rio de Janeiro, June 09 2011 - Petróleo Brasileiro S.A. - Petrobras announces two major oil discoveries and a gas discovery in ultradeep Hadrian area waters, in the Keathley Canyon concession, in the U.S. portion of the Gulf of Mexico.

Recoverable volumes are estimated in excess of 700 million barrels of oil equivalent in the Keathley Canyon blocks, among the biggest discoveries made in the Gulf of Mexico in the last decade.

The Hadrian discoveries are located about 250 miles (400 km) southwest of New Orleans in about 7,000 feet (2,100 meters) of water.

The discovery was made by drilling well KC919#3, in block KC 919, and confirmed over 475 feet (475 meters) of net oil pay. Deeper targets are still to be drilled.

Previous drilling activities had already encountered oil in blocks KC 919 and KC 918 - Hadrian North - and gas in blocks KC 963 and KC 964 - Hadrian South. Preliminary assessments point to the existence of an important cluster of hydrocarbon discoveries in this region. ExxonMobil is the operator with a 50% working interest in blocks KC 918, KC 919, KC 963, and KC 964; Petrobras, by means of America Inc., holds 50% stakes in block KC 918 and 25% in blocks KC 919, KC 963, and KC 964, while the remaining 25% are held by Eni Petroleum US LLC.
