Bennett Environmental Update

Oakville, Ontario, December 5, 2003 Bennett Environmental Inc. is a North American leader in the high temperature treatment of contaminated soils. As we approach the end of the year, this update is being released in order to inform shareholders of recent progress made by Bennett on several fronts. This includes the launching of new remediation services including new contracts, new acquisitions and the status of construction at our new facility in Belledune, New Brunswick.

Sales

In most cases, contaminated sites across North America contain varying amounts of contaminated soil and construction debris requiring offsite removal and treatment prior to recycling or end-disposal. Bennett operates treatment facilities and offers these services today. In addition, these sites often contain large amounts of lightly contaminated soil that can be safely and legally disposed of in specially engineered secure landfills. Bennett has recently concluded brokering arrangements with several firms throughout North America who operate these secure landfills. We can and now offer our customers a competitive one stop shop package for transportation and disposal services for all their contaminated soil and construction debris waste streams. This week, Bennett has received its first contract worth \$12M US for the transportation and disposal of lightly contaminated soil destined to a secure landfill. This new service is now an on-going part of our full line of service offerings, and Bennett expects this to be a significant new portion of revenues going forward.

Acquisition of ELI Ecologic International Inc.

In its continuous search for alternative treatment technologies, this week has been very eventful for Bennett. On December 1st, Bennett closed on its acquisition of ELI Ecologic International Inc., a subsidiary of ELI Ecologic Inc. The purchase includes a pilot test facility, operating permits in Ontario, and the right to use and licence the technology world wide except for Japan. Bennett intends to improve and carry on all aspects of this business, which is complementary to Bennett's thermal treatment services. Bennett now has the ability to offer a complete range of turnkey environmentally safe remediation services.

Belledune New Brunswick Construction Update

As of this week, we have now completed all the weather sensitive work on our new facility in New Brunswick. By the end of this month the structural work on the buildings will be substantially completed. To date the project is one-third complete. This includes construction of the building, and the manufacture and any retrofit of the thermal equipment. The project is on schedule with the commissioning stage anticipated to begin in May and full operation in July 2004.

The community and surrounding region have been very supportive of the project. All levels of government remain solidly behind the proposal and have never wavered in their backing, despite strong attempts by certain special interest groups to misrepresent the long-term environmental

For Immediate Release

effects of the plant. We would like to thank everyone involved in the project for their co-operation and the high level of encouragement we have received.

About Bennett Environmental Inc.

Bennett Environmental Inc. is a North American leader in high temperature treatment services for the remediation of contaminated soil and has provided thermal solutions to contamination problems throughout Canada and the US. Bennett Environmental's proprietary technology provides for the safe, economical and permanent solution to contaminated soil. Independent testing has consistently proven that the technology operates well within the most stringent criteria in North America.

Bennett Environmental is listed on the Toronto Stock Exchange (Trading Symbol BEV) and the American Stock Exchange (Trading Symbol BEL).
