**ENNIS, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010**

1. Significant Accounting Policies and General Matters

Basis of Presentation

These unaudited consolidated financial statements of Ennis, Inc. and its subsidiaries (collectively the Company or Ennis) for the quarter ended May 31, 2010 have been prepared in accordance with generally accepted accounting principles for interim financial reporting. Accordingly, they do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements and should be read in conjunction with the audited consolidated financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the year ended February 28, 2010, from which the accompanying consolidated balance sheet at February 28, 2010 was derived. All significant intercompany balances and transactions have been eliminated in consolidation. In the opinion of management, all adjustments considered necessary for a fair presentation of the interim financial information have been included and are of a normal recurring nature. In preparing the financial statements, the Company is required to make estimates and assumptions that affect the disclosure and reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The Company evaluates these estimates and judgments on an ongoing basis, including those related to bad debts, inventory valuations, property, plant and equipment, intangible assets, pension plan, accrued liabilities, and income taxes. The Company bases estimates and judgments on historical experience and on various other factors that are believed to be reasonable under the circumstances. The results of operations for any interim period are not necessarily indicative of the results of operations for a full year.

Recent Accounting Pronouncements

In January 2010, the Financial Accounting Standards Board (FASB) amended authoritative guidance for improving disclosures about fair-value measurements. The updated guidance requires new disclosures about recurring or nonrecurring fair-value measurements including significant transfers into and out of Level 1 and Level 2 fair-value measurements and information on purchases, sales, issuances, and settlements on a gross basis in the reconciliation of Level 3 fair-value measurements. The guidance also clarified existing fair-value measurement disclosure guidance about the level of disaggregation, inputs, and valuation techniques. The Company adopted this guidance on March 1, 2010 except for the disclosures requirements regarding purchases, sales, issuances and settlements on the roll-forward of activity in Level 3 fair-value measurements. Those disclosures will be effective for fiscal years beginning after December 15, 2010 and for interim periods within those fiscal years. The Company does not expect that the adoption of this guidance will have a material impact on the consolidated financial statements.

2. Accounts Receivable and Allowance for Doubtful Receivables

Accounts receivable are reduced by an allowance for an estimate of amounts that are uncollectible. Approximately 95% of the Company's receivables are due from customers in North America. The Company extends credit to its customers based upon its evaluation of the following factors: (i) the customer's financial condition, (ii) the amount of credit the customer requests and (iii) the customer's actual payment history (which includes disputed invoice resolution). The Company does not typically require its customers to post a deposit or supply collateral. The Company's allowance for doubtful receivables is based on an analysis that estimates the amount of its total customer receivable balance that is not collectible. This analysis includes assessing a default probability to customers' receivable balances, which is influenced by several factors including (i) current market conditions, (ii) periodic review of customer credit worthiness, and (iii) review of customer receivable aging and payment trends. The Company writes off accounts receivable when they become uncollectible, and payments subsequently received on such receivables are credited to the allowance in the period the payment is received. Credit losses from continuing operations have consistently been within management's expectations.

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010

2. Accounts Receivable and Allowance for Doubtful Receivables-continued

The following table represents the activity in the Company's allowance for doubtful receivables for the three months ended (in thousands):

	Three months ended	
	May 31,	
	2010	2009
Balance at beginning of period	\$ 4,446	\$ 3,561
Bad debt expense	989	539
Recoveries	12	12
Accounts written off	(454)	(547)
Foreign currency translation		28
Balance at end of period	\$ 4,993	\$ 3,593

3. Inventories

The Company uses the lower of last-in, first-out (LIFO) cost or market to value certain of its business forms inventories and the lower of first-in, first-out (FIFO) cost or market to value its remaining forms and apparel inventories. The Company regularly reviews inventories on hand, using specific aging categories, and writes down the carrying value of its inventories for excess and potentially obsolete inventories based on historical usage and estimated future usage. In assessing the ultimate realization of its inventories, the Company is required to make judgments as to future demand requirements. As actual future demand or market conditions may vary from those projected by the Company, adjustments to inventories may be required.

The following table summarizes the components of inventories at the different stages of production as of the dates indicated (in thousands):

	May 31,	February
	2010	28,
		2010
Raw material	\$ 10,946	\$ 11,089
Work-in-process	18,132	14,280
Finished goods	48,864	49,768
	\$ 77,942	\$ 75,137

4. Goodwill and Other Intangible Assets

Goodwill represents the excess of the purchase price over the fair value of net assets of acquired businesses and is not amortized. Goodwill and indefinite-lived intangibles are evaluated for impairment on an annual basis, or more frequently if impairment indicators arise, using a fair-value-based test that compares the fair value of the asset to its carrying value. Fair values of reporting units are typically calculated using a factor of expected earnings before interest, taxes, depreciation, and amortization. Based on this evaluation, no impairment was recorded. The Company must make assumptions regarding estimated future cash flows and other factors to determine the fair value of the respective assets in assessing the recoverability of its goodwill and other intangibles. If these estimates or the related assumptions change, the Company may be required to record impairment charges for these assets in the future. The cost of intangible assets is based on fair values at the date of acquisition. Intangible assets with determinable lives are amortized on a straight-line basis over their estimated useful life (between 1 and 10 years). Trademarks with

indefinite lives and a net book value of \$58.5 million at May 31, 2010 are evaluated for impairment on an annual basis, or more frequently if impairment indicators arise. After conducting its fiscal year 2010 test, the Company determined there was no impairment. The Company assesses the recoverability of its definite-lived intangible assets primarily based on its current and anticipated future undiscounted cash flows.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010

4. Goodwill and Other Intangible Assets-continued

The carrying amount and accumulated amortization of the Company's intangible assets at each balance sheet date are as follows (in thousands):

	Gross Carrying Amount	Accumulated Amortization	Net
As of May 31, 2010			
Amortized intangible assets (in thousands)			
Tradenames	\$ 1,234	\$ 908	\$ 326
Customer lists	29,908	10,718	19,190
Noncompete	500	488	12
	\$ 31,642	\$ 12,114	\$ 19,528

As of February 28, 2010

Amortized intangible assets (in thousands)			
Tradenames	\$ 1,234	\$ 875	\$ 359
Customer lists	29,908	10,155	19,753
Noncompete	500	483	17
	\$ 31,642	\$ 11,513	\$ 20,129

	May 31, 2010	February 28, 2010
Non-amortizing intangible assets (in thousands)		
Trademarks	\$ 58,538	\$ 58,538

Aggregate amortization expense for the three months ended May 31, 2010 and May 31, 2009 was \$601,000 and \$602,000, respectively.

The Company's estimated amortization expense for the current and next five fiscal years is as follows:

2011	\$ 2,397,000
2012	2,391,000
2013	2,347,000
2014	2,254,000
2015	2,136,000
2016	2,078,000

Changes in the net carrying amount of goodwill are as follows (in thousands):

	Print Segment Total	Apparel Segment Total	Total
Balance as of March 1, 2009	\$ 42,792	\$ 74,549	\$ 117,341

Goodwill acquired			
Goodwill impairment			
Balance as of March 1, 2010	42,792	74,549	117,341
Goodwill acquired			
Goodwill impairment			
Balance as of May 31, 2010	\$ 42,792	\$ 74,549	\$ 117,341

During the three months ended May 31, 2010 and fiscal year ended 2009, there were no adjustments to goodwill.

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010

5. Other Accrued Expenses

The following table summarizes the components of other accrued expenses as of the dates indicated (in thousands):

	May 31, 2010	February 28, 2010
Accrued taxes	\$ 286	\$ 265
Accrued legal and professional fees	239	392
Accrued interest	135	114
Accrued utilities	1,354	1,322
Accrued repairs and maintenance	581	547
Accrued construction retainer	954	582
Accrued phantom stock obligation	470	422
Accrual-earn out agreements	511	594
Other accrued expenses	2,065	1,482
	\$ 6,595	\$ 5,720

6. Derivative Instruments and Hedging Activities

The Company uses derivative financial instruments to manage its exposure to interest rate fluctuations on its floating rate \$150.0 million revolving credit facility maturing August 18, 2012. On July 7, 2008, the Company entered into a three-year Interest Rate Swap Agreement (Swap) for a notional amount of \$40.0 million. The Swap effectively fixes the LIBOR rate at 3.79%.

The Swap was designated as a cash flow hedge, and the fair value at May 31, 2010 and February 28, 2010 was \$(1.4) million (\$(0.9) million net of deferred taxes) and \$(1.8) million (\$(1.2) million net of deferred taxes), respectively. The Swap has been reported on the Consolidated Balance Sheet as long-term debt with a related deferred charge recorded as a component of other comprehensive income (loss). During the three months ended May 31, 2010, there was a loss of approximately \$362,000 reclassified from accumulated other comprehensive income to interest expense related to the Swap.

7. Fair Value Financial Instruments

The carrying amounts of cash, accounts receivable, accounts payable and long-term debt approximate fair value because of the short maturity and/or variable rates associated with these instruments. Derivative financial instruments are recorded at fair value.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. The hierarchy below lists three levels of fair value based on the extent to which inputs used in measuring fair value are observable in the market. The Company categorizes each of its fair value measurements in one of these three levels based on the lowest level input that is significant to the fair value measurement in its entirety. These levels are:

Level 1 Inputs utilize quoted prices (unadjusted) in active markets for identical assets or liabilities that the Company has the ability to access.

Level 2 Inputs utilize data points that are observable such as quoted prices, interest rates and yield curves.

Level 3 Inputs are unobservable data points for the asset or liability, and include situations where there is little, if any, market activity for the asset or liability.

Derivatives are reported at fair value utilizing Level 2 inputs. The Company utilizes valuation models with observable market data inputs to estimate the fair value of its Swap.

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010

7. Fair Value Financial Instruments-continued

The following table summarizes financial assets and financial liabilities measured at fair value on a recurring basis as of May 31, 2010 and February 28, 2010, segregated by the level of the valuation inputs within the fair value hierarchy utilized to measure fair value (in thousands):

Description	May 31,	Fair Value Measurements		
	2010	(Level 1)	(Level 2)	(Level 3)
Derivative liability (Swap)	\$ (1,432)	\$	\$ (1,432)	\$
	\$ (1,432)	\$	\$ (1,432)	\$

Description	February 28,	Fair Value Measurements		
	2010	(Level 1)	(Level 2)	(Level 3)
Derivative liability (Swap)	\$ (1,817)	\$	\$ (1,817)	\$
	\$ (1,817)	\$	\$ (1,817)	\$

8. Long-Term Debt

Long-term debt consisted of the following as of the dates indicated (in thousands):

	May 31, 2010	February 28, 2010
Revolving credit facility	\$ 40,000	\$ 40,000
Interest rate swap	1,432	1,817
Long-term debt	\$ 41,432	\$ 41,817

On August 18, 2009, the Company entered into a Second Amended and Restated Credit Agreement (the Facility) with a group of lenders led by Bank of America, N.A. (the Lenders). The Facility provides the Company access to \$150.0 million in revolving credit, which the Company may increase to \$200.0 million in certain circumstances, and matures on August 18, 2012. The Facility bears interest at the London Interbank Offered Rate (LIBOR) plus a spread ranging from 2.0% to 3.5% (currently LIBOR + 2.25% or 2.6% at May 31, 2010), depending on the Company's total funded debt to EBITDA ratio, as defined. As of May 31, 2010, the Company had \$40.0 million of borrowings under the revolving credit line and \$2.5 million outstanding under standby letters of credit arrangements, leaving the Company availability of approximately \$107.5 million. The Facility contains financial covenants, restrictions on capital expenditures, acquisitions, asset dispositions, and additional debt, as well as other customary covenants, such as total funded debt to EBITDA ratio, as defined. The Company is in compliance with these covenants as of May 31, 2010. The Facility is secured by substantially all of the Company's domestic assets as well as all capital securities of each Domestic Subsidiary and 65% of all capital securities of each direct Foreign Subsidiary.

We capitalized \$292,000 of interest expense for the three months ended May 31, 2010 relating to the construction of the Agua Prieta facility. There was no interest expense capitalized for the three months ended May 31, 2009.

Balance

May 31, 2010 30,053,443 \$ 75,134 \$ 121,372 \$ 215,096 \$ (13,178) (4,234,944) \$ (75,631) \$ 322,793

On October 20, 2008, the Board of Directors authorized the repurchase of up to \$5.0 million of the common stock through a stock repurchase program. Under the board-approved repurchase program, share purchases may be made from time to time in the open market or through privately negotiated transactions depending on market conditions, share price, trading volume and other factors, and such purchases, if any, will be made in accordance with applicable insider trading and other securities laws and regulations. These repurchases may be commenced or suspended at any time or from time to time without prior notice. Unrelated to the stock repurchase program, the Company purchased 91 shares of the common stock during the three months ended May 31, 2010. As of May 31, 2010, there have been 96,000 shares of the common stock that have been purchased under the repurchase program at an average price per share of \$10.45.

10. Stock Option Plan and Stock Based Compensation

The Company has stock options and restricted stock granted to key executives and managerial employees and non-employee directors. At May 31, 2010, the Company has one stock option plan: the 2004 Long-Term Incentive Plan of Ennis, Inc., as amended and restated as of May 14, 2008, formerly the 1998 Option and Restricted Stock Plan amended and restated as of June 17, 2004 ("Plan"). The Company has 268,713 shares of unissued common stock reserved under the plan for issuance to officers and directors, and supervisory employees of the Company and its subsidiaries. The exercise price of each stock option granted equals the quoted market price of the Company's common stock on the date of grant, and an option's maximum term is ten years. Stock options and restricted stock may be granted at different times during the year and vest ratably over various periods, from grant date up to five years. The Company uses treasury stock to satisfy option exercises and restricted stock awards.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010

10. Stock Option Plan and Stock Based Compensation-continued

The Company recognizes compensation expense for stock options and restricted stock grants on a straight-line basis over the requisite service period. For the three months ended May 31, 2010 and 2009, the Company included in selling, general and administrative expenses, compensation expense related to share based compensation of \$416,000 (\$264,000 net of tax), and \$246,000 (\$155,000 net of tax), respectively.

Stock Options

The Company had the following stock option activity for the three months ended May 31, 2010:

	Number of Shares (exact quantity)	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life (in years)	Aggregate Intrinsic Value(a) (in thousands)
Outstanding at February 28, 2010	250,200	\$ 12.09	6.0	\$ 1,003
Granted	62,500	18.46		
Terminated				
Exercised				
Outstanding at May 31, 2010	312,700	\$ 13.36	6.6	\$ 1,445
Exercisable at May 31, 2010	171,450	\$ 13.53	4.3	\$ 764

- (a) Intrinsic value is measured as the excess fair market value of the Company's Common Stock as reported on the New York Stock Exchange over the applicable exercise price.

The following is a summary of the assumptions used and the weighted average grant-date fair value of the stock options granted during the three months ended May 31, 2010 and 2009:

	2010	May 31, 2009
Expected volatility	34.63%	32.35%
Expected term (years)	3	4
Risk free interest rate	1.58%	2.01%
Dividend yield	4.24%	4.74%

Weighted average grant-date fair value	\$ 3.348	\$ 1.583
--	----------	----------

There were no stock options exercised during either the three months ended May 31, 2010 or May 31, 2009.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010

10. Stock Option Plan and Stock Based Compensation-continued

A summary of the status of the Company's unvested stock options at February 28, 2010, and changes during the three months ended May 31, 2010 is presented below:

	Number of Options	Weighted Average Grant Date Fair Value
Unvested at February 28, 2010	110,000	\$ 1.64
New grants	62,500	3.35
Vested	(31,250)	1.79
Forfeited		
Unvested at May 31, 2010	141,250	\$ 2.36

As of May 31, 2010, there was \$315,000 of unrecognized compensation cost related to unvested stock options granted under the Plan. The weighted average remaining requisite service period of the unvested stock options was 2.9 years. The total fair value of shares underlying the options vested during the three months ended May 31, 2010 was \$550,000.

Restricted Stock

The Company had the following restricted stock grant activity for the three months ended May 31, 2010:

	Number of Shares	Weighted Average Grant Date Fair Value
Outstanding at February 28, 2010	91,470	\$ 15.38
Granted	39,000	18.46
Terminated		
Vested	(57,227)	16.23
Outstanding at May 31, 2010	73,243	\$ 16.36

As of May 31, 2010, the total remaining unrecognized compensation cost related to unvested restricted stock was approximately \$927,000. The weighted average remaining requisite service period of the unvested restricted stock awards was 1.8 years.

11. Employee Benefit Plans

The Company and certain subsidiaries have a noncontributory defined benefit retirement plan covering approximately 14% of their employees. Benefits are based on years of service and the employee's average compensation for the highest five compensation years preceding retirement or termination. The Company's funding policy is to contribute annually an amount in accordance with the requirements of the Employee Retirement Income Security Act of 1974 (ERISA).

Pension expense is composed of the following components included in cost of good sold and selling, general and administrative expenses in the Company's consolidated statements of earnings (in thousands):

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
FOR THE PERIOD ENDED MAY 31, 2010

11. Employee Benefit Plans-continued

	Three months ended May 31,	
	2010	2009
Components of net periodic benefit cost		
Service cost	\$ 303	\$ 285
Interest cost	654	685
Expected return on plan assets	(765)	(606)
Amortization of:		
Prior service cost	(36)	(36)
Unrecognized net loss	336	424
Net periodic benefit cost	\$ 492	\$ 752

The Company is required to make contributions to its defined benefit pension plan. These contributions are required under the minimum funding requirements of ERISA. For the current fiscal year ending February 28, 2011, there is not a minimum contribution requirement and no pension payments have been made so far this fiscal year; however, the Company expects to contribute from \$2.0 million to \$3.0 million in the fourth quarter of fiscal year 2011. The Company contributed \$3.0 million to its pension plan during fiscal year 2010.

12. Earnings per share

Basic earnings per share have been computed by dividing net earnings by the weighted average number of common shares outstanding during the applicable period. Diluted earnings per share reflect the potential dilution that could occur if stock options or other contracts to issue common shares were exercised or converted into common stock. At May 31, 2010, 95,000 shares related to stock options were not included in the diluted earnings per share computation because their exercise price exceeded the average fair market value of the Company's stock for the period. At February 28, 2010, 98,950 shares related to stock options were not included in the diluted earnings per share computation because their exercise price exceeded the average fair market value of the Company's stock for the period. The following table sets forth the computation for basic and diluted earnings per share for the periods indicated:

	Three months ended May 31,	
	2010	2009
Basic weighted average common shares outstanding	25,800,647	25,821,139
Effect of dilutive options	49,290	15,678
Diluted weighted average common shares outstanding	25,849,937	25,836,817
Per share amounts:		
Net earnings basic	\$ 0.51	\$ 0.26
Net earnings diluted	\$ 0.50	\$ 0.26
Cash dividends	\$ 0.155	\$ 0.155

13. Segment Information and Geographic Information

The Company operates in two segments the Print Segment and the Apparel Segment.

The Print Segment, which represented 48% of the Company's consolidated net sales for the three months ended May 31, 2010, is in the business of manufacturing, designing, and selling business forms and other printed business products primarily to distributors located in the United States. The Print Segment operates 37 manufacturing locations throughout the United States in 16 strategically located domestic states. Approximately 96% of the business products manufactured by the Print Segment are custom and semi-custom, constructed in a wide variety of sizes, colors, number of parts and quantities on an individual job basis depending upon the customers' specifications.

The products sold include snap sets, continuous forms, laser cut sheets, tags, labels, envelopes, integrated products, jumbo rolls and pressure sensitive products in short, medium and long runs under the following labels: Ennis®, Royal Business Forms®, Block Graphics®, Specialized Printed FormsSM, 360° Custom LabelsSM, Enfusion®, Uncompromised Check Solutions®, Witt PrintingSM, B&D Litho of ArizonaSM, Genforms® and Calibrated Forms®. The Print Segment also sells the Adams-McClure® brand (which provides Point of Purchase advertising for large franchise and fast food chains as well as kitting and fulfillment); the Admore® brand (which provides presentation folders and document folders); Ennis Tag & LabelSM (which provides tags and labels, promotional products and advertising concept products); Trade Envelopes® and Block Graphics® (which provide custom and imprinted envelopes) and Northstar® and GFS® (which provide financial and security documents).

The Print Segment sells predominantly through private printers and independent distributors. Northstar and GFS also sell to a small number of direct customers. Northstar has continued its focus with large banking organizations on a direct basis (where a distributor is not acceptable or available to the end-user) and has acquired several of the top 25 banks in the United States as customers and is actively working on other large banks within the top 25 tier of banks in the United States. Adams-McClure sales are generally provided through advertising agencies.

The second segment, the Apparel Segment, which accounted for 52% of the Company's consolidated net sales for the three months ended May 31, 2010, consists of Alstyle Apparel. This group is primarily engaged in the production and sale of activewear including t-shirts, fleece goods, and other wearables. Alstyle sales are seasonal, with sales in the first and second quarters generally being the highest. Substantially all of the Apparel Segment sales are to customers in the United States.

Corporate information is included to reconcile segment data to the consolidated financial statements and includes assets and expenses related to the Company's corporate headquarters and other administrative costs.

Segment data for the three months ended May 31, 2010 and 2009 were as follows (in thousands):

	Print Segment	Apparel Segment	Corporate	Consolidated Totals
Three months ended May 31, 2010:				
Net sales	\$ 67,790	\$ 72,951	\$	\$ 140,741

FOR THE PERIOD ENDED MAY 31, 2010**

15. Concentrations of Risk

Financial instruments that potentially subject the Company to a concentration of credit risk principally consist of cash and trade receivables. Cash is placed with high-credit quality financial institutions. The Company's credit risk with respect to trade receivables is limited in management's opinion due to industry and geographic diversification. As disclosed on the Consolidated Balance Sheets, the Company maintains an allowance for doubtful receivables to cover estimated credit losses associated with accounts receivable.

The Company, for quality and pricing reasons, purchases its paper, cotton and yarn products from a limited number of suppliers. To maintain its high standard of color control associated with its apparel products, the Company purchases its dyeing chemicals from limited sources. While other sources may be available to the Company to purchase these products, they may not be available at the cost or at the quality the Company has come to expect.

For the purposes of the consolidated statements of cash flows, the Company considers cash to include cash on hand and in bank accounts. The Federal Deposit Insurance Corporation (FDIC) insures accounts up to \$250,000. At May 31, 2010, cash balances included \$10.1 million that was not federally insured because it represented amounts in individual accounts above the federally insured limit for each such account. This at-risk amount is subject to fluctuation on a daily basis. While management does not believe there is significant risk with respect to such deposits, we cannot be assured that we will not experience losses on our deposits. At May 31, 2010, the Company had \$538,000 in Canadian and \$2.2 million in Mexican bank accounts.

16. Assets Held for Sale

As of May 31, 2010, the Company had land, building and equipment of approximately \$0.8 million classified as assets held for sale on the consolidated balance sheet. This balance is comprised of land and building with a net book value of \$0.7 million and equipment with a net book value of \$0.1 million.

FORM 10-Q

FOR THE PERIOD ENDED MAY 31, 2010

Item 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Overview

Ennis, Inc. (formerly Ennis Business Forms, Inc.) was organized under the laws of Texas in 1909. Ennis, Inc. and its subsidiaries (collectively known as the Company, Registrant, Ennis, or we, us, or our) print and manufacture a broad line of business forms and other business products and also manufacture a line of activewear for distribution throughout North America. Distribution of business products and forms throughout the United States, Canada, and Mexico is primarily through independent dealers, and with respect to our activewear products, through sales representatives. This distributor channel encompasses print distributors, stationers, quick printers, computer software developers, activewear wholesalers, screen printers and advertising agencies, among others. The Apparel Segment produces and sells activewear, including t-shirts, fleece goods and other wearables. We offer a great selection of high-quality activewear apparel and hats with a wide variety of styles and colors in sizes ranging from toddler to 6XL. The apparel line features a wide variety of tees, fleece, shorts and yoga pants, and two headwear brands.

Business Segment Overview

We are one of the largest providers of business forms to independent distributors in the United States and are also one of the largest providers of blank t-shirts in North America to the active-wear market. We operate in two reportable segments Print and Apparel. For additional financial information concerning segment reporting, please see Note 13 of the Notes to the Consolidated Financial Statements beginning on page 16 included elsewhere herein, which information is incorporated herein by reference.

Print Segment

The Print Segment, which represented 48% of our consolidated net sales for the three months ended May 31, 2010, is in the business of manufacturing, designing and selling business forms and other printed business products primarily to distributors located in the United States. The Print Segment operates 37 manufacturing locations throughout the United States in 16 strategically located domestic states. Approximately 96% of the business products manufactured by the Print Segment are custom and semi-custom products, constructed in a wide variety of sizes, colors, and quantities on an individual job basis depending upon the customers' specifications.

The products sold include snap sets, continuous forms, laser cut sheets, tags, labels, envelopes, integrated products, jumbo rolls and pressure sensitive products in short, medium and long runs under the following labels: Ennis®, Royal Business Forms®, Block Graphics®, Specialized Printed FormsSM, 360° Custom LabelsSM, Enfusion®, Uncompromised Check Solutions®, Witt PrintingSM, B&D Litho of ArizonaSM, Genforms® and Calibrated Forms®. The Print Segment also sells the Adams-McClure® brand (which provides Point of Purchase advertising for large franchise and fast food chains as well as kitting and fulfillment); the Admore® brand (which provides presentation folders and document folders); Ennis Tag & LabelSM (which provides tags and labels, promotional products and advertising concept products); Trade Envelopes®, and Block Graphics® (which provide custom and imprinted envelopes) and Northstar® and GFS® (which provide financial and security documents).

The Print Segment sells predominantly through private printers and independent distributors. Northstar and GFS also sell to a small number of direct customers. Northstar has continued its focus with large banking organizations on a direct basis (where a distributor is not acceptable or available to the end-user) and has acquired several of the top 25 banks in the United States as customers and is actively working on other large banks within the top 25 tier of banks in the United States. Adams-McClure sales are generally through advertising agencies.

The printing industry generally sells its products in two ways. One market direction is to sell predominately to end users, and is dominated by a few large manufacturers, such as Moore Wallace (a subsidiary of R.R. Donnelly), Standard Register, and Cenveo. The other market direction, which the Company primarily serves, sells forms and other business products through a variety of independent distributors and distributor groups. While it is not possible, because of the lack of adequate statistical information, to determine Ennis' share of the total business products

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010

market, management believes Ennis is one of the largest producers of business forms in the United States distributing primarily through independent dealers and that its business forms offering is more diversified than that of most companies in the business forms industry.

There are a number of competitors that operate in this segment, ranging in size from single employee-owner operations to multi-plant organizations, such as Cenveo and their resale brand known as: PrintXcel, Discount Label, and Printegra. We believe our strategic locations and buying power permit us to compete on a favorable basis within the distributor market on competitive factors, such as service, quality, and price.

Distribution of business forms and other business products throughout the United States is primarily done through independent dealers; including business forms distributors, stationers, printers, computer software developers, and advertising agencies.

Raw materials of the Print Segment principally consist of a wide variety of weights, widths, colors, sizes, and qualities of paper for business products purchased from a number of major suppliers at prevailing market prices.

Business products usage in the printing industry is generally not seasonal. General economic conditions and contraction of the traditional business forms industry are the predominant factor in quarterly volume fluctuations.

Our Print Business Challenges In our Print segment, we are engaged in an industry undergoing significant changes. Technology advances have made electronic distribution of documents, internet hosting, digital printing and print on demand valid, cost-effective alternatives to traditional custom printed documents and customer communications. In addition, the downturn in the economy and turmoil in the credit markets in 2009 and 2010 have created highly competitive conditions in an already over-supplied, price-competitive industry. Thus, we believe we are facing the following challenges in the Print Segment of our business:

Transformation of our portfolio of products

Excess production capacity and price competition within our industry

Economic uncertainties

The following is a discussion of these business challenges and our strategy for managing their effect on our print business.

Transformation of our portfolio of products Traditional business documents are essential in order to conduct business. However, many are being replaced or devalued with advances in digital technologies, causing steady declines in demand for a large portion of our current product line. The same digital advances also introduce potential new opportunities for growth for us, such as print-on-demand services and product offerings that assist customers in their transition to digital business environments. We currently have many innovative products, such as our recently introduced healthcare wristbands, secure document solutions, and innovative in-mold label offerings, which address important business needs, and we feel are positioned for growth. In addition, we will continue to look for new market opportunities and niches, such as our addition of our envelope offerings that provide us with an opportunity for growth and differentiate us from our competition. Transforming our product offerings to continue to provide innovative, valuable solutions to our customers on a proactive basis will require us to make investments in new and existing technology and to develop key strategic business relationships.

Excess production capacity and price competition within our industry Paper mills continue to adjust production capacity through downtime and closures to attempt to keep projected customer demand in line with the available supply. Due to the limited number of paper mills, paper prices have been and are expected to remain fairly volatile. In 2010, we saw our material prices stabilize due to the depressed economic conditions. However, we would expect paper mills to continue to increase paper prices, especially as the economy strengthens, and have already experienced paper price increases during the first quarter of fiscal 2011.

Despite a competitive marketplace, we have generally been able to pass through increased paper costs, although it can often take several quarters to push these through due to the custom nature of our products and/or contractual

relationships with some of our customers. We expect this trend to continue; however, weak economic conditions

20

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

may limit our ability to recover all these costs. In addition, poor economic conditions have also resulted in increased price competition, due to an already over-supplied market, which continues to put pressure on selling prices. We attempt to effectively manage and control our product costs to minimize the effects of the foregoing on our operational results, primarily through the use of forecasting models, and production and costing models. However, an inherent risk in this process is that our assumptions are inaccurate, which could have a negative impact on our reported profit margins.

Economic uncertainties As a result of the recessionary conditions of 2009 and 2010, the economic climate has been volatile and challenging. Decreased demand and intense price competition resulted in significant declines in our revenue during the past fiscal year. Although, we have seen slight improvements in some economic indicators within our markets, unemployment rates and other leading indicators continue to be strained. A weak job market may continue to present a challenging environment for substantial revenue growth next fiscal year. As we cannot predict the pace of the economic recovery, we will be highly focused on customer retention, expanding our growth targeted products and continuing to develop our new market niches. In addition, we have proven a history of managing our costs and wouldn't expect this trend to change in the future.

Apparel Segment

The Apparel Segment represented 52% of our consolidated net sales for the three months ended May 31, 2010, and operates under the name of Alstyle Apparel (Alstyle). Alstyle markets high quality knit basic activewear (t-shirts, tank tops, and fleece) across all market segments. The products of Alstyle are standardized shirts manufactured in a variety of sizes and colors. Approximately 99% of Alstyle's revenues are derived from t-shirt sales, and 92% of those are domestic sales. Alstyle's branded product lines are sold under the AAA label, Murin[®] and Hyland[®] Headwear brands.

The Apparel Segment operates six manufacturing facilities, one in California, and five in Mexico. Alstyle is headquartered in Anaheim, California, where it knits domestic cotton yarn and some polyester fibers into tubular material. The material is dyed at that facility and then shipped to its plants in Ensenada or Hermosillo, Mexico, where it is cut and sewn into finished goods. Alstyle also ships their dyed fabric to outsourced manufacturers in El Salvador for sewing. After sewing and packaging is completed, the product is shipped to one of Alstyle's eight distribution centers located across the United States, Canada, and Mexico.

Alstyle utilizes a customer-focused internal sales team comprised of 23 sales representatives assigned to specific geographic territories in the United States, Canada, and Mexico. Sales representatives are allocated performance objectives for their respective territories and are provided financial incentives for achievement of their target objectives. Sales representatives are responsible for developing business with large accounts and spend approximately 60% of their time in the field.

Alstyle employs a staff of customer service representatives that handle call-in orders from smaller customers. Sales personnel sell directly to Alstyle's customer base, which consists primarily of screen printers, embellishers, retailers, and mass marketers.

A majority of Alstyle's sales are branded products, with the remainder customer private label products. Generally, sales to screen printers and mass marketers are driven by price and the availability of products, which directly impacts inventory level requirements. Sales in the private label business are characterized by slightly higher customer loyalty.

Alstyle's most popular styles are produced based on demand management forecasts to permit quick shipment and to level production schedules. Alstyle offers same-day shipping and uses third party carriers to ship products to its customers.

Alstyle's sales are seasonal, with sales in the first and second quarters generally being the highest. The apparel industry is characterized by rapid shifts in fashion, consumer demand and competitive pressures, resulting in both price and demand volatility. However, the imprinted activewear market to which Alstyle sells to is generally event driven. Blank t-shirts can be thought of as walking billboards promoting movies, concerts, sports teams, and

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

image brands. Still, the demand for any particular product varies from time to time based largely upon changes in consumer preferences and general economic conditions affecting the apparel industry.

The apparel industry is comprised of numerous companies who manufacture and sell a wide range of products. Alstyle is primarily involved in the activewear market and produces t-shirts, and outsources such products as fleece, hats, shorts, pants and other such activewear apparel from China, Thailand, Pakistan, and other foreign sources to sell to its customers through its sales representatives. Alstyle competes with many branded and private label manufacturers of knit apparel in the United States, Canada, and Mexico, some of which are larger in size and have greater financial resources than Alstyle. Alstyle competes on the basis of price, quality, service, and delivery. Alstyle's strategy is to provide the best value to its customers by delivering a consistent, high-quality product at a competitive price. Alstyle's competitive disadvantage is that its brand name, Alstyle Apparel, is not as well known as the brand names of its largest competitors, such as Gildan, Delta, Hanes, and Russell. While it is not possible to calculate precisely, based on public information available, management believes that Alstyle is one of the top three providers of blank t-shirts in North America.

Raw materials of the Apparel Segment principally consist of cotton and polyester yarn purchased from a number of major suppliers at prevailing market prices, although we purchase more than 70% of our cotton and yarn from one supplier.

Our Apparel Business Challenges In our Apparel segment, our market niche is highly competitive, commodity driven and is generally dominated by a limited number of players. The downturn in the economy and turmoil in the credit markets in 2009 and 2010 created an over-supply situation which further increased competitive pressures in this market. Cotton, which represents 40% of our costs, is a commodity product and subject to volatile fluctuations in price, due to general market conditions, domestic and international demand, perceived availability, international actions, etc. As such, our operational costs are subject to significant swings, which we may or may not be passed on to the marketplace due to competitive or economic conditions, competitors' pricing strategies, etc. Thus, we believe we are facing the following challenges in our Apparel Segment business in fiscal 2011:

Cotton prices

Completion of our new manufacturing facility

Economic uncertainties

Cotton prices Due to shortage of supply and other international factors, domestic cotton prices are at levels not seen in years, if ever. Whether or not prices will stay at this level for a sustained period of time is unknown. However, as most manufacturers have already locked in a significant portion of their cotton buys for this year, a decline in spot cotton prices later this year would only have a marginal impact on overall calendar year 2010 blended costs. We believe we are competitive with other companies in the United States apparel industry in negotiating the price of cotton and as such we do not feel we are at a competitive disadvantage from a cotton perspective. However, it is unknown at this time whether the market will allow the manufacturers to pass these costs through to customers and whether our competitors will in fact attempt to pass through these costs.

Completion of our new manufacturing facility We are building a state-of-the art manufacturing facility in Agua Prieta, Mexico (the Project) and expect construction to be completed during the second quarter of fiscal 2011, with facility start-up and limited production commencing during the third quarter of fiscal 2011. After the successful implementation of Phase 1 of the Project, this facility will be able to process 1 million pounds of fabric per week, with the eventual capacity, after Phase 2 implementation, being between 2.6 million to 2.8 million pounds per week, as compared to our current capacity of approximately 1.6 million to 1.8 million pounds per week.

During the initial ramp up of this facility, there will be considerable duplicate costs, inefficiencies, moving costs, etc. that will have a negative impact on the apparel segment's fiscal year 2011 operating results. Our plan is to contain these costs in fiscal year 2011, to the extent possible, through an accelerated ramp up schedule. We would expect the

negative impact of the start-up and ramp up costs of this facility will be approximately \$6 million to \$8 million. However, the success of our plan is dependent on meeting key targets and a delayed start-up/wind-down schedule could add significantly to these costs. Once fully operational, with sell-through levels of 2.6 million pounds

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010

to 2.8 million pounds per week, and with anticipated manufacturing efficiency factors being realized, this facility is expected to generate between \$10.0 million to \$15.0 million in annualized cost savings per year.

Economic uncertainties As a result of the recessionary conditions of 2009 and 2010, the economic climate has been volatile and challenging. Decreased demand and intense price competition resulted in significant declines in our revenue during the past fiscal year. Although we saw a significant increase in our revenues during our fourth quarter of last fiscal year, and would expect such to continue during the first couple quarters of fiscal 2011, continued high unemployment rates and continued weakness in the housing sector, along with international crisis could undermine the fragile state of the current economic recovery. As we cannot predict the pace of the economic recovery, we will be highly focused on customer retention, expanding our growth targeted markets and managing our costs (both the start-up and operational costs).

Risk Factors

You should carefully consider the risks described below, as well as the other information included or incorporated by reference in the Annual Report on Form 10-K, before making an investment in our common stock. The risks described below are not the only ones we face in our business. Additional risks and uncertainties not presently known to us or that we currently believe to be immaterial may also impair our business operations. If any of the following risks occur, our business, financial condition or operating results could be materially harmed. In such an event, our common stock could decline in price and you may lose all or part of your investment.

Our results and financial condition are affected by global and local market conditions, and competitors pricing strategies, which can adversely affect our sales, margins, and net income.

Our results of operations are substantially affected not only by global economic conditions, but also by local market conditions, and competitors pricing strategies, which can vary substantially by market. Unfavorable conditions can depress sales in a given market and may prompt promotional or other actions that adversely affect our margins, constrain our operating flexibility or result in charges. Certain macroeconomic events, such as the recent crisis in the financial markets, could have a more wide-ranging and prolonged impact on the general business environment, which could also adversely affect us. Whether we can manage these risks effectively depends mainly on the following:

Our ability to manage upward pressure on commodity prices and the impact of government actions to manage national economic conditions such as consumer spending, inflation rates and unemployment levels, particularly given the current volatility in the global financial markets;

The impact on our margins of labor costs given our labor-intensive business model, the trend toward higher wages in both mature and developing markets and the potential impact of union organizing efforts on day-to-day operations of our manufacturing facilities.

Declining economic conditions could negatively impact our business.

Our operations are affected by local, national and worldwide economic conditions. Markets in the United States and elsewhere have been experiencing extreme volatility and disruption due in part to the financial stresses affecting the liquidity of the banking system and the financial markets generally. The consequences of a potential or prolonged recession may include a lower level of economic activity and uncertainty regarding energy prices and the capital and commodity markets. A lower level of economic activity might result in a decline in demand for our products, which may adversely affect our revenues and future growth. Instability in the financial markets, as a result of recession or otherwise, also may affect our cost of capital and our ability to raise capital.

We have significant amounts of cash that are in excess of federally insured limits. With the current financial environment and the instability of financial institutions, we cannot be assured that we will not experience losses on our deposits.

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

The terms and conditions of our credit facility impose certain restrictions on our operations. We may not be able to raise additional capital, if needed, for proposed expansion projects.

The terms and conditions of our credit facility impose certain restrictions on our ability to incur additional debt, make capital expenditures, acquisitions, asset dispositions, as well as other customary covenants, such as minimum equity level and total funded debt to EBITDA, as defined. Our ability to comply with the covenants may be affected by events beyond our control, such as distressed and volatile financial markets which could trigger an impairment charge to our recorded intangible assets. In fiscal year 2009, we were required to write down goodwill and other intangible assets, and we may have similar charges in the future, which could cause our financial condition and results of operations to be negatively affected in the future. A breach of any of these covenants could result in a default under our credit facility. In the event of a default, the bank could elect to declare the outstanding principal amount of our credit facility, all interest thereon, and all other amounts payable under our credit facility to be immediately due and payable. As of May 31, 2010, we were in compliance with all terms and conditions of our credit facility, which matures on August 18, 2012.

We may be required to borrow under our credit facility to provide financing for our new manufacturing facility in Agua Prieta in the state of Sonora, Mexico. Our ability to access this facility for these funds will depend upon our future operating performance, which will be affected by prevailing economic, financial and business conditions and other factors, some of which are beyond our control. In the event that we are not able to access the facility for the funds needed and require additional capital, there can be no assurance that we will be able to raise such capital when needed or at all.

Declining financial market conditions could adversely impact the funding status of our pension plan.

We maintain a defined-benefit pension plan covering approximately 14% of our employees. Included in our financial results are pension costs that are measured using actuarial valuations. The actuarial assumptions used may differ from actual results. In addition, as our pension assets are invested in marketable securities, severe fluctuations in market values could potentially negatively impact our funding status, recorded pension liability, and future required minimum contribution levels.

We may be required to write down goodwill and other intangible assets which could cause our financial condition and results of operations to be negatively affected in the future.

When we acquire a business, a portion of the purchase price of the acquisition may be allocated to goodwill and other identifiable intangible assets. The amount of the purchase price which is allocated to goodwill and other intangible assets is the excess of the purchase price over the net identifiable tangible assets acquired. The annual impairment test is based on several factors requiring judgment. A decline in market conditions may indicate potential impairment of goodwill. An impairment test was completed for our fiscal year ended February 28, 2010, and we concluded that no impairment charge was necessary. At May 31, 2010, our goodwill and other intangible assets were approximately \$117.3 million and \$78.1 million, respectively.

Digital technologies will continue to erode the demand for our printed business documents.

The increasing sophistication of software, internet technologies, and digital equipment combined with our customers' general preference, as well as governmental influences, for paperless business environments will continue to reduce the number of printed documents sold. Moreover, the documents that will continue to coexist with software applications will likely contain less value-added print content.

Many of our custom-printed documents help companies control their internal business processes and facilitate the flow of information. These applications will increasingly be conducted over the internet or through other electronic payment systems. The predominant method of our clients' communication to their customers is by printed information. As their customers become more accepting of internet communications, our clients may increasingly opt for the less costly electronic option, which would reduce our revenue. The pace of these trends is difficult to predict. These factors will tend to reduce the industry-wide demand for printed documents and require us to gain market share to maintain or increase our current level of print-based revenue.

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

In response to the gradual obsolescence of our standardized forms business, we continue to develop our capability to provide custom and full-color products. If new printing capabilities and new product introductions do not continue to offset the obsolescence of our standardized business forms products, and we aren't able to increase our market share, our sales and profits will be affected. Decreases in sales of our standardized business forms and products due to obsolescence could also reduce our gross margins. This reduction could in turn adversely impact our profits, unless we are able to offset the reduction through the introduction of new high margin products and services or realize cost savings in other areas.

Our distributors face increased competition from various sources, such as office supply superstores. Increased competition may require us to reduce prices or to offer other incentives in order to enable our distributors to attract new customers and retain existing customers.

Low price, high value office supply chain stores offer standardized business forms, checks and related products. Because of their size, these superstores have the buying power to offer many of these products at competitive prices. These superstores also offer the convenience of one-stop shopping for a broad array of office supplies that our distributors do not offer. In addition, superstores have the financial strength to reduce prices or increase promotional discounts to expand market share. This could result in us reducing our prices or offering incentives in order to enable our distributors to attract new customers and retain existing customers.

Technological improvements may reduce our competitive advantage over some of our competitors, which could reduce our profits.

Improvements in the cost and quality of printing technology are enabling some of our competitors to gain access to products of complex design and functionality at competitive costs. Increased competition from these competitors could force us to reduce our prices in order to attract and retain customers, which could reduce our profits.

We could experience labor disputes that could disrupt our business in the future.

As of May 31, 2010, approximately 12% of our domestic employees are represented by labor unions under collective bargaining agreements, which are subject to periodic renegotiations. Two unions represent all of our hourly employees in Mexico. While we feel we have a good working relationship with all the unions, there can be no assurance that any future labor negotiations will prove successful, which may result in a significant increase in the cost of labor, or may break down and result in the disruption of our business or operations.

We obtain our raw materials from a limited number of suppliers, and any disruption in our relationships with these suppliers, or any substantial increase in the price of raw materials or material shortages could have a material adverse effect on us.

Cotton yarn is the primary raw material used in Alstyle's manufacturing processes. Cotton accounts for approximately 40% of the manufactured product cost. Alstyle acquires its yarn from three major sources that meet stringent quality and on-time delivery requirements. The largest supplier provides over 70% of Alstyle's yarn requirements and has an entire yarn mill dedicated to Alstyle's production. To maintain our high standard of color control associated with our apparel products, we purchase our dyeing chemicals from limited sources. If Alstyle's relations with its suppliers are disrupted, Alstyle may not be able to enter into arrangements with substitute suppliers on terms as favorable as its current terms, and our results of operations could be materially adversely affected.

We also purchase our paper products from a limited number of sources, which meet stringent quality and on-time delivery standards under long-term contracts. However, fluctuations in the quality of our paper, unexpected price increases or other factors that relate to our paper products could have a material adverse effect on our operating results.

Both cotton and paper are commodities that are subject to periodic increases or decreases in price, sometimes quite significant. There is no effective market to cost-effectively insulate us against unexpected changes in price of paper, and corporate negotiated purchase contracts provide only limited protection against price increases. We generally acquire our cotton yarn under short-term purchase contracts with our suppliers. While we generally do not

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

use derivative instruments, including cotton option contracts, to manage our exposure to movements in cotton market prices, we believe we are competitive with other companies in the United States apparel industry in negotiating the price of cotton. When cotton or paper prices are increased, we attempt to recover the higher costs by raising the prices of our products to our customers. In the price-competitive marketplaces in which we operate, we may not always be able to pass through any or all of the higher costs. As such, any significant increase in the price of paper or cotton or shortages in the availability of either, could have a material adverse effect on our results of operations.

We face intense competition to gain market share, which may lead some competitors to sell substantial amounts of goods at prices against which we cannot profitably compete.

Demand for Alstyle's products is dependent on the general demand for shirts and the availability of alternative sources of supply. Alstyle's strategy in this market environment is to be a low cost producer and to differentiate itself by providing quality service and quality products to its customers. Even if this strategy is successful, its results may be offset by reductions in demand or price declines due to competitors' pricing strategies. Our Print Segment also faces the risk of our competition following a strategy of selling their products at or below cost in order to cover some amount of fixed costs, especially in distressed economic times.

The apparel industry is heavily influenced by general economic cycles.

The apparel industry is cyclical and dependent upon the overall level of discretionary consumer spending, which changes as regional, domestic and international economic conditions change. These include, but are not limited to, employment levels, energy costs, interest rates, tax rates, personal debt levels, and uncertainty about the future. Any deterioration in general economic conditions that creates uncertainty or alters discretionary consumer spending habits could reduce our sales, increase our costs of goods sold or require us to significantly modify our current business practices, and consequently negatively impact our results of operations.

Our apparel foreign operations could be subject to unexpected changes in regulatory requirements, tariffs and other market barriers and political and economic instability in the countries where it operates, which could negatively impact our operating results.

Alstyle operates cutting and sewing facilities in Mexico and sources certain product manufacturing and purchases in El Salvador, Thailand, India, Pakistan and China. Alstyle's foreign operations could be subject to unexpected changes in regulatory requirements, tariffs, and other market barriers and political and economic instability in the countries where it operates. The impact of any such events that may occur in the future could subject Alstyle to additional costs or loss of sales, which could adversely affect our operating results. In particular, Alstyle operates its facilities in Mexico pursuant to the maquiladora duty-free program established by the Mexican and United States governments. This program enables Alstyle to take advantage of generally lower costs in Mexico, without paying duty on inventory shipped into or out of Mexico. There can be no assurance that the governments of Mexico and the United States will continue the program currently in place or that Alstyle will continue to be able to benefit from this program. The loss of these benefits could have an adverse effect on our business.

Our apparel products are subject to foreign competition, which in the past have been faced with significant U.S. government import restrictions.

Foreign producers of apparel often have significant labor cost advantages. Given the number of these foreign producers, the substantial elimination of import protections that protect domestic apparel producers could materially adversely affect Alstyle's business. The extent of import protection afforded to domestic apparel producers has been, and is likely to remain, subject to considerable political considerations.

The North American Free Trade Agreement (NAFTA) became effective on January 1, 1994 and has created a free-trade zone among Canada, Mexico, and the United States. NAFTA contains a rule of origin requirement that products be produced in one of the three countries in order to benefit from the agreement. NAFTA has phased out all trade restrictions and tariffs among the three countries on apparel products competitive with those of Alstyle. Alstyle

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

performs substantially all of its cutting and sewing in five plants located in Mexico in order to take advantage of the NAFTA benefits. Subsequent repeal or alteration of NAFTA could adversely affect our business.

The Central American Free Trade Agreement (CAFTA) became effective May 28, 2004 and retroactive to January 1, 2004 for textiles and apparel. It creates a free trade zone similar to NAFTA by and between the United States and Central American countries (El Salvador, Honduras, Costa Rica, Nicaragua, and Dominican Republic.) Textiles and apparel are duty-free and quota-free immediately if they meet the agreement's rule of origin, promoting new opportunities for U.S. and Central American fiber, yarn, fabric and apparel manufacturing. The agreement gives duty-free benefits to some apparel made in Central America that contains certain fabrics from NAFTA partners Mexico and Canada. Alstyle outsourced approximately 14% of its sewing to contract manufacturers in El Salvador, and we do not anticipate that alteration or subsequent repeal of CAFTA would have a material effect on our operations.

The World Trade Organization (WTO), a multilateral trade organization, was formed in January 1995 and is the successor to the General Agreement on Tariffs and Trade (GATT). This multilateral trade organization has set forth mechanisms by which world trade in clothing is being progressively liberalized by phasing-out quotas and reducing duties over a period of time that began in January of 1995. As it implements the WTO mechanisms, the United States government is negotiating bilateral trade agreements with developing countries, which are generally exporters of textile and apparel products, that are members of the WTO to get them to reduce their tariffs on imports of textiles and apparel in exchange for reductions by the United States in tariffs on imports of textiles and apparel.

In January 2005, United States import quotas were removed on knitted shirts from China. The elimination of quotas and the reduction of tariffs under the WTO may result in increased imports of certain apparel products into North America. In May 2005, quotas on three categories of clothing imports, including knitted shirts, from China were re-imposed. A reduction of import quotas and tariffs could make Alstyle's products less competitive against low cost imports from developing countries.

Environmental regulations may impact our future operating results.

We are subject to extensive and changing federal, state and foreign laws and regulations establishing health and environmental quality standards, and may be subject to liability or penalties for violations of those standards. We are also subject to laws and regulations governing remediation of contamination at facilities currently or formerly owned or operated by us or to which we have sent hazardous substances or wastes for treatment, recycling or disposal. We may be subject to future liabilities or obligations as a result of new or more stringent interpretations of existing laws and regulations. In addition, we may have liabilities or obligations in the future if we discover any environmental contamination or liability at any of our facilities, or at facilities we may acquire.

Our construction of a new apparel manufacturing facility in Mexico is subject to multiple approvals and uncertainties that could affect our ability to complete the project on schedule or at budgeted cost.

The construction of our new apparel manufacturing facility in the town of Agua Prieta in the state of Sonora, Mexico is expected to be completed during fiscal year 2011. The construction of this new facility will involve numerous regulatory, environmental, political, and legal uncertainties beyond our control. The cost of the facility and the equipment required for the facility will require the expenditure of significant amounts of capital that will be financed through internal cash flows or alternatively through borrowings under our credit facility which are contingent on us continuing to meet certain financial covenants. Moreover, this facility is being built to capture anticipated future growth in demand and anticipated savings in production costs. Should such growth or production savings not materialize, or should the timeline for our transition be delayed, we may be unable to achieve our expected investment return, which could adversely affect our results of operations and financial condition.

We are exposed to the risk of non-payment by our customers on a significant amount of our sales.

Our extension of credit involves considerable judgment and is based on an evaluation of each customer's financial condition and payment history. We monitor our credit risk exposure by periodically obtaining credit reports and updated financials on our customers. We saw a heightened amount of bankruptcies by our customers,

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

especially retailers, during the recent economic downturn. While we maintain an allowance for doubtful receivables for potential credit losses based upon our historical trends and other available information, in times of economic turmoil, there is heightened risk that our historical indicators may prove to be inaccurate. The inability to collect on sales to significant customers or a group of customers could have a material adverse effect on our results of operations.

Our business incurs significant freight and transportation costs.

We incur significant freight costs to transport our goods, especially as it relates to our Apparel Segment where we transport our product from our domestic textile plant to foreign sewing facilities and then to bring our goods back into the United States. In addition, we incur transportation expenses to ship our products to our customers. Significant increases in the costs of freight and transportation could have a material adverse effect on our results of operations, as there can be no assurance that we could pass these increased costs to our customers.

The price of energy is prone to significant fluctuations and volatility.

Our apparel manufacturing operations require high inputs of energy, and therefore changes in energy prices directly impact our gross profit margins. We are focusing on manufacturing methods that will reduce the amount of energy used in the production of our apparel products to mitigate the rising costs of energy. Significant increases in energy prices could have a material adverse effect on our results of operations, as there can be no assurance that we could pass these increased costs to our customers given the competitive environment in which our Apparel segment operates.

We rely on independent contract production for a portion of our apparel production.

We have historically relied on third party suppliers to provide approximately 10% of our cut and sew apparel production. Any shortage of supply, production disruptions, shipping delays, regulatory changes, significant price increases from our suppliers, could adversely affect our apparel operating results.

We depend upon the talents and contributions of a limited number of individuals, many of whom would be difficult to replace.

The loss or interruption of the services of our Chief Executive Officer, Executive Vice President, Vice President of Apparel or Chief Financial Officer could have a material adverse effect on our business, financial condition or results of operations. Although we maintain employment agreements with these individuals, it cannot be assured that the services of such individuals will continue.

Cautionary Statements

You should read this discussion and analysis in conjunction with our Consolidated Financial Statements and the related notes appearing elsewhere in this Report. In addition, certain statements in this Report, and in particular, statements found in Management's Discussion and Analysis of Financial Condition and Results of Operations, constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. We believe these forward-looking statements are based upon reasonable assumptions within the bounds of our knowledge of Ennis. All such statements involve risks and uncertainties, and as a result, actual results could differ materially from those projected, anticipated or implied by these statements. Such forward-looking statements involve known and unknown risks, including but not limited to, general economic, business and labor conditions; the ability to implement our strategic initiatives; the ability to be profitable on a consistent basis; dependence on sales that are not subject to long-term contracts; dependence on suppliers; the ability to recover the rising cost of key raw materials in markets that are highly price competitive; the ability to meet customer demand for additional value-added products and services; the ability to timely or adequately respond to technological changes in the industry; the impact of the Internet and other electronic media on the demand for forms and printed materials; postage rates; the ability to manage operating expenses; the ability to manage financing costs and interest rate risk; a decline in business volume and profitability could result in an impairment of goodwill; the ability to retain key management

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

personnel; the ability to identify, manage or integrate future acquisitions; the costs associated with and the outcome of outstanding and future litigation; and changes in government regulations.

In view of such uncertainties, investors should not place undue reliance on our forward-looking statements since such statements may prove to be inaccurate and speak only as of the date when made. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Critical Accounting Policies and Estimates

In preparing our consolidated financial statements, we are required to make estimates and assumptions that affect the disclosures and reported amounts of assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. We evaluate our estimates and judgments on an ongoing basis, including those related to allowance for doubtful receivables, inventory valuations, property, plant and equipment, intangible assets, pension plan obligations, accrued liabilities and income taxes. We base our estimates and judgments on historical experience and on various other factors that we believe to be reasonable under the circumstances. Actual results may differ materially from these estimates under different assumptions or conditions. We believe the following accounting policies are the most critical due to their affect on our more significant estimates and judgments used in preparation of our consolidated financial statements.

We maintain a defined-benefit pension plan for employees. Included in our financial results are pension costs that are measured using actuarial valuations. The actuarial assumptions used may differ from actual results. As our pension assets are invested in marketable securities, fluctuations in market values could potentially impact our funding status and associated liability recorded.

Amounts allocated to amortizable intangible assets are determined based on valuation analysis for our acquisitions and are amortized over their expected useful lives. We evaluate these amounts periodically (at least once a year) to determine whether a triggering event has occurred during the year that would indicate potential impairment.

We exercise judgment in evaluating our long-lived assets for impairment. We assess the impairment of long-lived assets that include other intangible assets, goodwill, and property, plant, and equipment annually or whenever events or changes in circumstances indicate that the carrying value may not be recoverable. In performing tests of impairment, we must make assumptions regarding the estimated future cash flows and other factors to determine the fair value of the respective assets in assessing the recoverability of our long lived assets. If these estimates or the related assumptions change, we may be required to record impairment charges for these assets in the future. Actual results could differ from assumptions made by management. At May 31, 2010, our goodwill and other intangible assets were approximately \$117.3 million and \$78.1 million, respectively. We believe our businesses will generate sufficient undiscounted cash flow to more than recover the investments we have made in property, plant and equipment, as well as the goodwill and other intangibles recorded as a result of our acquisitions. However, we cannot predict the occurrence of future impairments or specific triggering events nor the impact such events might have on our reported asset values.

Revenue is generally recognized upon shipment of products. Net sales consist of gross sales invoiced to customers, less certain related charges, including discounts, returns and other allowances. Returns, discounts and other allowances have historically been insignificant. In some cases and upon customer request, we print and store custom print product for customer specified future delivery, generally within twelve months. In this case, risk of loss from obsolescence passes to the customer, the customer is invoiced under normal credit terms and revenue is recognized when manufacturing is complete. Approximately \$3.5 million of revenue were recognized under these agreements during the three months ended May 31, 2010 as compared to \$3.4 million during the three months ended May 31, 2009.

We maintain an allowance for doubtful receivables to reflect estimated losses resulting from the inability of customers to make required payments. On an on-going basis, we evaluate the collectability of accounts receivable based upon historical collection trends, current economic factors, and the assessment of the collectability of specific

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

accounts. We evaluate the collectability of specific accounts using a combination of factors, including the age of the outstanding balances, evaluation of customers' current and past financial condition and credit scores, recent payment history, current economic environment, discussions with our project managers, and discussions with the customers directly.

Our inventories are valued at the lower of cost or market. We regularly review inventory values on hand, using specific aging categories, and write down inventory deemed obsolete and/or slow-moving based on historical usage and estimated future usage to its estimated market value. As actual future demand or market conditions may vary from those projected by management, adjustments to inventory valuations may be required.

As part of the process of preparing our consolidated financial statements, we are required to estimate our income taxes in each jurisdiction in which we operate. This process involves estimating our actual current tax exposure together with assessing temporary differences resulting from different treatment of items for tax and accounting purposes. These differences result in deferred tax assets and liabilities, which are included in our consolidated balance sheets. We must then assess the likelihood that our deferred tax assets will be recovered from future taxable income. To the extent we believe that recovery is not likely, we must establish a valuation allowance. To the extent we establish a valuation allowance we must include an expense within the tax provision in the consolidated statements of earnings. In the event that actual results differ from these estimates, our provision for income taxes could be materially impacted.

In addition to the above, we also have to make assessments as to the adequacy of our accrued liabilities, more specifically our liabilities recorded in connection with our workers compensation and health insurance, as these plans are self funded. To help us in this evaluation process, we routinely get outside third party assessments of our potential liabilities under each plan.

In view of such uncertainties, investors should not place undue reliance on our forward-looking statements since such statements speak only as of the date when made. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Result of Operations

The discussion that follows provides information which we believe is relevant to an understanding of our results of operations and financial condition. The discussion and analysis should be read in conjunction with the accompanying consolidated financial statements and notes thereto. This analysis is presented in the following sections:

Consolidated Summary this section provides an overview of our consolidated results of operations for the three months ended May 31, 2010 and 2009.

Segment Operating Results this section provides an analysis of our net sales, gross profit margin and operating income by segment.

Consolidated Summary

Consolidated Statements of Earnings - Data	Three Months Ended May 31,			
	2010		2009	
Net sales	\$ 140,741	100.0%	\$ 130,830	100.0%
Cost of goods sold	98,561	70.0	99,846	76.3
Gross profit margin	42,180	30.0	30,984	23.7
Selling, general and administrative	21,247	15.1	19,459	14.9
Gain from disposal of assets			(2)	
Income from operations	20,933	14.9	11,527	8.8
Other expense, net	(397)	(0.3)	(995)	(0.7)
Earnings before income taxes	20,536	14.6	10,532	8.1
Provision for income taxes	7,496	5.3	3,897	3.0
Net earnings	\$ 13,040	9.3%	\$ 6,635	5.1%

Net Sales. On a comparable basis our sales increased from \$130.8 million for the three months ended May 31, 2009 to \$140.7 million for the current quarter, or 7.6%. Our Print Segment sales for the quarter decreased \$3.9 million, or 5.4%, from \$71.7 million for the same quarter last year to \$67.8 million for the current quarter. Our Apparel Segment sales increased \$13.9 million, or 23.5%, from \$59.1 million for the same quarter last year to \$73.0 million for the current quarter.

Cost of Goods Sold. Due to continued operational efficiencies and lower cotton prices, our manufacturing costs decreased by \$1.2 million or 1.2% over the same quarter last year while our sales increased over that same period by \$9.9 million as described above. Our cost of goods sold for the three months ended May 31, 2010 was \$98.6 million, or 70.0% of sales, compared to \$99.8 million, or 76.3% of sales for the three months ended May 31, 2009. We saw our gross profit margin improve 630 basis points during the quarter from 23.7% for the three months ended May 31, 2009 to 30.0% for the three months ended May 31, 2010.

Selling, general and administrative expense. For the three months ended May 31, 2010, our selling, general and administrative expenses were \$21.2 million, or 15.1% of sales, compared to \$19.5 million, or 14.9% of sales for the three months ended May 31, 2009, or an increase of approximately \$1.7 million, or 8.7%. Selling expenses increased generally as a result of increased sales and related expenses.

Gain/Loss from disposal of assets. The gain from disposal of assets of \$2,000 for the three months ended May 31, 2009 resulted primarily from the sale of manufacturing equipment. There was no gain or loss from the disposal of assets for the three months ended May 31, 2010.

Income from operations. Our income from operations for the three months ended May 31, 2010 was \$20.9 million or 14.9% of sales, compared to \$11.5 million, or 8.8% of sales for the three months ended May 31, 2009, an increase of \$9.4 million, or 81.7%. The increase in our operational earnings during the current period was primarily related to our increased sales and gross profit margin.

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010

Other income and expense. Interest expense decreased from \$0.7 million for the three months ended May 31, 2009 to \$0.4 million for the three months ended May 31, 2010. During the current period, we capitalized \$.3 million in interest expense relating to our Agua Prieta, Mexico construction project. In addition, while we had less debt on average outstanding during the current period (\$76 million for the quarter ended May 31, 2009 versus \$40 million for the current quarter), our effective borrowing rate was higher due to an increase in our LIBOR spread rate from 50 bps to 225 bps, which occurred when we renewed our credit facility last August 2009.

Provision for income taxes. Our effective tax rate was 36.5% for the three months ended May 31, 2010 compared to 37.0% for the three months ended May 31, 2009. The decrease in our effective tax rate from the prior year primarily is a result of increased benefits associated with our expected Domestic Production Activities Deduction.

Net earnings. Due to the above factors, our net earnings for the three months ended May 31, 2010 was \$13.0 million, or 9.3% of sales, compared to \$6.6 million, or 5.1% of sales for the three months ended May 31, 2009. Our basic earnings per share were \$0.51 per share for the three months ended May 31, 2010 compared to \$0.26 per share for the three months ended May 31, 2009. Our diluted earnings per share were \$0.50 per share for the three months ended May 31, 2010 compared to \$0.26 per share for the three months ended May 31, 2009.

Segment Operating Results

Net Sales by Segment (in thousands)	Three months ended May 31,	
	2010	2009
Print	\$ 67,790	\$ 71,710
Apparel	72,951	59,120
Total	\$ 140,741	\$ 130,830

Print Segment. While on a linked quarter basis (May 31, 2010 versus February 28, 2010), our Print sales increased 2.6% (\$67.8 million versus \$66.1 million), on a comparable quarter basis our Print sales decreased 5.4% from \$71.7 million for the three months ended May 31, 2009 to \$67.8 million for the three months ended May 31, 2010. While we are seeing signs of improvement in the print market, our print sales continue to be impacted by general economic conditions and the continued contraction of the traditional business forms market which occurs as customers continue to migrate away from traditional printed business form products due to technological advancements. The evolution to digital technology has been transpiring for some time now, and we would expect this to continue into the future. The turbulent economy has also lead to increased pricing pressures in an already competitive market. We would expect the print market will continue to improve as the general economy and domestic unemployment improves.

Apparel Segment. Our Apparel sales increased 23.5% during the quarter, from \$59.1 million for the three months ended May 31, 2009 to \$73.0 million for the three months ended May 31, 2010. On a linked quarter basis our Apparel sales were up 32.0% (\$73.0 million versus \$55.3 million). The increase in the Apparel Segment's net sales during the period was due to a unit volume sales increase to new and existing customers of approximately 20.7% (29.0% on a linked quarter basis) and an increase in our average unit selling price of approximately 2.8%.

Gross Profit by Segment (in thousands)	Three months ended May 31,	
	2010	2009
Print	\$ 20,536	\$ 18,901
Apparel	21,644	12,083

Total	\$ 42,180	\$ 30,984
-------	-----------	-----------

Print Segment. Our Print gross profit margin (margin) as a percentage of sales was 30.3% for the three months ended May 31, 2010, as compared to 26.4% for the three months ended May 31, 2009. Despite the sales

32

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010

volume decline and paper price increases, we were able to continue to increase our margin through continued operational efficiencies and cost control measures.

Apparel Segment. Our Apparel gross profit margin (margin) as a percentage of sales was 29.7% for the three months ended May 31, 2010, as compared to 20.4% for the three months ended May 31, 2009. Our Apparel Segment margin increased due to the following: 1) lower cotton prices, which had been locked in at previously contracted prices earlier in the prior calendar year when cotton was selling at a much lower price per pound than currently, 2) product mix changes, 3) the unit selling price increase previously discussed and 4) continued operational efficiencies. While cotton played a significant role in the improvement of our margins during the current quarter, due to shortage of supply and other international factors, current domestic cotton prices are at levels not seen in years, if ever. Whether or not prices will stay at this level for a sustained period of time is unknown. The higher cost of cotton may start to impact our operational results next quarter and will continue at least through the end of this calendar year depending on our ability or inability to pass these costs through to the market. As we have entered into contracts for the majority of our anticipated cotton requirements for this calendar year, any decline in spot cotton prices later this year would only have a marginal impact on our overall calendar year 2010 blended costs. We believe we are competitive with other companies in the United States apparel industry in negotiating the price of cotton and as such we do not feel we are at a competitive disadvantage from a cotton perspective. However, it is unknown at this time whether the market will allow the manufacturers to pass these costs through and whether our competitors will in fact attempt to pass through these costs.

Profit by Segment (in thousands)	Three months ended May 31,	
	2010	2009
Print	\$ 12,502	\$ 10,810
Apparel	12,502	3,399
Total	25,004	14,209
Less corporate expenses	4,468	3,677
Earnings before income taxes	\$ 20,536	\$ 10,532

Print Segment. Due to the factors previously discussed, our Print profit increased approximately \$1.7 million, or 15.7%, from \$10.8 million for the three months ended May 31, 2009, to \$12.5 million for the three months ended May 31, 2010. As a percent of sales, our Print profit was 18.4% for the three months ended May 31, 2010, as compared to 15.1% for the three months ended May 31, 2009.

Apparel Segment. Our Apparel profit increased approximately \$9.1 million, or 267.6%, from \$3.4 million for the three months ended May 31, 2009 to \$12.5 million for the three months ended May 31, 2010. As a percent of sales, our Apparel profit was 17.1% for the three months ended May 31, 2010, compared to 5.7% for the comparable period last year. Our Apparel profit increased primarily as a result of increased sales and improved margins realized during the quarter due to the factors previously discussed.

Liquidity and Capital Resources

(Dollars in thousands)	May 31,	February	Change
	2010	28, 2010	
Working Capital	\$ 115,866	\$ 116,638	-0.7%
Cash	\$ 13,498	\$ 21,063	-35.9%

Working Capital. Our working capital decreased slightly from \$116.6 million at February 28, 2010 to \$115.9 million at May 31, 2010. Our current ratio, calculated by dividing our current assets by our current liabilities increased from 3.3 to 1.0 at February 28, 2010 to 3.4 to 1.0 at May 31, 2010.

Table of Contents

ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010

<i>(Dollars in thousands)</i>	Three months ended May 31,		
	2010	2009	Change
Net Cash provided by operating activities	\$ 9,651	\$ 25,170	-61.7%
Net Cash used in investing activities	\$ (13,158)	\$ (624)	2008.7%
Net Cash used in financing activities	\$ (4,008)	\$ (4,462)	-10.2%

Cash flows from operating activities. Cash provided by operating activities decreased by \$15.5 million from \$25.2 million for the three months ended May 31, 2009 to \$9.7 million for the three months ended May 31, 2010. We generated \$6.4 million more in cash through our improved earnings, but used cash during the period to increase our Apparel inventory level to coincide with their increased sales volume and reduce our payables to take advantage of some prompt payment discounts previously not offered by some of our vendors. Last year we generated \$13.6 million in cash through reducing our inventories and \$4.0 million through managing our payables and prepaid expenses.

Cash flows from investing activities. Cash used for investing activities, which related to capital expenditures, increased by \$12.6 million, from \$0.6 million for the three months ended May 31, 2009 to \$13.2 million for the three months ended May 31, 2010. The increase in our capital expenditures relates primarily to our new Apparel manufacturing facility located in Agua Prieta, Mexico.

Cash flows from financing activities. We used \$0.5 million less in cash associated with our financing activities this period when compared to the same period last year. We repaid debt of approximately \$0.1 million and repurchased \$0.4 million of our common stock during the three months ended May 31, 2009. We did not repay any additional debt during the three months ended May 31, 2010.

Credit Facility. On August 18, 2009, we entered into a Second Amended and Restated Credit Agreement (the Facility) with a group of lenders led by Bank of America, N.A. (the Lenders). The Facility provides us access to \$150.0 million in revolving credit, which we may increase to \$200.0 million in certain circumstances, and matures on August 18, 2012. The Facility bears interest at the London Interbank Offered Rate (LIBOR) plus a spread ranging from 2.0% to 3.5% (currently LIBOR + 2.25% or 2.6% at May 31, 2010), depending on our total funded debt to EBITDA ratio, as defined. As of May 31, 2010, we had \$40.0 million of borrowings under the revolving credit line and \$2.5 million outstanding under standby letters of credit arrangements, leaving us availability of approximately \$107.5 million. The Facility contains financial covenants, restrictions on capital expenditures, acquisitions, asset dispositions, and additional debt, as well as other customary covenants, such as total funded debt to EBITDA ratio, as defined. We are in compliance with all these covenants as of May 31, 2010. The Facility is secured by substantially all of our domestic assets as well as all capital securities of each Domestic Subsidiary and 65% of all capital securities of each direct Foreign Subsidiary.

During the three months ended May 31, 2010, we did not pay any additional amounts on other debt. It is anticipated that the available line of credit is sufficient to cover working capital requirements for the foreseeable future should it be required.

We use derivative financial instruments to manage our exposures to interest rate fluctuations on our floating rate \$150.0 million revolving credit maturing August 18, 2012. We account for our derivatives as cash flow hedges and record them as either assets or liabilities in the balance sheet, measure those instruments at fair value and recognize changes in the fair value of derivatives in earnings in the period of change, unless the derivative qualifies as an effective hedge that offsets certain exposures.

On July 7, 2008, we entered into a three-year Interest Rate Swap Agreement (Swap) for a notional amount of \$40.0 million. The Swap effectively fixes the LIBOR rate at 3.79%. The Swap was designated as a cash flow hedge, and the fair value at May 31, 2010 was \$(1.4) million, \$(0.9) million net of deferred taxes. The Swap was reported on the Consolidated Balance Sheet in long-term debt with a related deferred charge recorded as a component of other comprehensive income.

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

Pension We are required to make contributions to our defined benefit pension plan. These contributions are required under the minimum funding requirements of the Employee Retirement Pension Plan Income Security Act of 1974 (ERISA). We anticipate that we will contribute from \$2.0 million to \$3.0 million during our current fiscal year. We made contributions of \$3.0 million to our pension plan during fiscal year 2010.

Inventories We believe our current inventory levels are sufficient to satisfy our customer demands and we anticipate having adequate sources of raw materials to meet future business requirements. The previously reported long-term contracts (that govern prices, but do not require minimum volume) with paper and yarn suppliers continue to be in effect. Certain of our rebate programs do, however, require minimum purchase volumes. Management anticipates meeting the required volumes.

Capital Expenditures We expect our capital requirements for 2011, exclusive of capital required for possible acquisitions and the construction of our new manufacturing facility in Agua Prieta, Mexico will be in line with our historical levels of between \$4.0 million and \$8.0 million. We would expect to fund these expenditures through existing cash flows. We would expect to generate sufficient cash flows from our operating activities to cover our operating and other normal capital requirements for our foreseeable future.

Consistent with previously announced plans to build a new manufacturing facility in the town of Agua Prieta in the state of Sonora, Mexico, we continue to estimate that the total capital expenditures associated with this project will be in the range of \$45 million to \$50 million (\$20 million – \$25 million for building and \$20 million – \$25 million for machinery and equipment). To date we have spent approximately \$30.0 million. We continue to expect that the remaining funding for this project will be provided by internal cash flow and, as required, by our existing credit facilities. The facility is expected to begin production during the third quarter of fiscal year 2011.

Contractual Obligations & Off-Balance Sheet Arrangements There have been no significant changes in our contractual obligations since February 28, 2010 that have, or are reasonably likely to have, a material impact on our results of operations or financial condition. We had no off-balance sheet arrangements in place as of May 31, 2010.

Item 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Market Risk

Cash

We have significant amounts of cash at financial institutions that are in excess of federally insured limits. With the current financial environment and the instability of financial institutions, we cannot be assured that we will not experience losses on our deposits.

Interest Rates

We are exposed to market risk from changes in interest rates on debt. We may from time to time utilize interest rate swaps to manage overall borrowing costs and reduce exposure to adverse fluctuations in interest rates. We do not use derivative instruments for trading purposes. We are exposed to interest rate risk on short-term and long-term financial instruments carrying variable interest rates. Our variable rate financial instruments, including the outstanding credit facility, totaled \$40.0 million at May 31, 2010. We entered into a \$40.0 million interest rate swap designated as a cash flow hedge related to this debt. The LIBOR rate on \$40.0 million of debt is effectively fixed through this interest rate swap agreement. There would be no impact on our results of operations of a one-point interest rate change on the outstanding balance of the variable rate financial instruments as of May 31, 2010.

Foreign Exchange

We have global operations and thus make investments and enter into transactions in various foreign currencies. The value of our consolidated assets and liabilities located outside the United States (translated at period end exchange rates) and income and expenses (translated using average rates prevailing during the period), generally denominated in Pesos and Canadian Dollars, are affected by the translation into our reporting currency (the U.S.

Table of Contents

**ENNIS, INC. AND SUBSIDIARIES
FORM 10-Q
FOR THE PERIOD ENDED MAY 31, 2010**

Dollar). Such translation adjustments are reported as a separate component of shareholders' equity. In future periods, foreign exchange rate fluctuations could have an increased impact on our reported results of operations.

This market risk discussion contains forward-looking statements. Actual results may differ materially from this discussion based upon general market conditions and changes in domestic and global financial markets.

Item 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures. An evaluation was carried out under the supervision and with the participation of our management, including our Chief Executive Officer and our Chief Financial Officer, of the effectiveness of the design of our disclosure controls and procedures (as such term is defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) as of the end of the period covered by this quarterly report, pursuant to Exchange Act Rule 13a-15. Based upon that evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that our disclosure controls and procedures as of May 31, 2010 are effective to ensure that information required to be disclosed by us in the reports filed or submitted by us under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms and include controls and procedures designed to ensure that information required to be disclosed by us in such reports is accumulated and communicated to our management, including our principal executive and financial officers as appropriate to allow timely decisions regarding required disclosure. Due to the inherent limitations of control systems, not all misstatements may be detected. Those inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple errors or mistakes. Additionally, controls could be circumvented by the individual acts of some persons or by collusion of two or more people. Our controls and procedures can only provide reasonable, not absolute, assurance that the above objectives have been met.

There were no changes in our internal control over financial reporting identified in connection with the evaluation required by paragraph (d) of Exchange Act Rules 13a-15 or 15d-15 that occurred during our last fiscal quarter that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings

There are no material pending proceedings, other than ordinary routine litigation incidental to the business, to which the Company or any of its subsidiaries is a party or of which any of their property is subject.

Item 1A. Risk Factors

Reference is made to page 23 of this Report on Form 10-Q. There have been no material changes in our Risk Factors as previously discussed in our Annual Report on Form 10-K for the year ended February 28, 2010.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

Unrelated to the stock repurchase program, the Company purchased 91 shares of the common stock during the three months ended May 31, 2010. There is a maximum amount of approximately \$4.0 million that may yet be used to purchase shares under the program.

Under the existing plan which was enacted by the Board in October 20, 2008, the Company was authorized to repurchase up to \$5.0 million of the common stock. As of June 28, 2010, the Company repurchased 96,000 shares for an aggregate consideration of approximately \$1.0 million.

Items 3 and 5 are not applicable and have been omitted

Item 4. Submission of Matters to a Vote of Security Holders

There were no matters submitted to security holders for a vote during the quarter.
