Note: The term GAAP in the following explanation refers to generally accepted accounting principles in the United States.

Operating margin is considered a Non-GAAP financial measure as defined by SEC Regulation G. We define operating margin as pre-tax income, adjusted to remove advertising expense and any unusual gains or charges. We consider operating margin an important measure of the financial performance of our ongoing business. Advertising spending is excluded from operating margin because it is largely at the discretion of the Company, varies significantly from period to period based on market conditions and relates to the acquisition of future revenues through new accounts rather than current revenues from existing accounts. Unusual gains and charges are excluded from operating margin because we believe they are not likely to be indicative of the ongoing operations of our business. Operating margin should be considered in addition to, rather than as a substitute for, pre-tax income and net income.
